In the same city we have, in the small remains of the chapter-house of St. Mary's Abbey, a most exquisite example of the style. The foliage in this is most beautiful, the very model, indeed, of transitional carving. At Byland Abbey, we have the style carried out into its now advanced period. The same occurs in the refectories of Fountains and Rievaulx, and in many other noble structures in that country.

The very same details which characterise these northern specimens may be traced into Scotland and thence to Norway, where at Drontheim are details hardly distinguishable from those of the early Yorkshire abbeys.

In London we have an example of the same in the western part of the Temple Church, built, I think, in 1138, though here closely allied to the preceding style.

The most remarkable example, however, in this country, is the choir with the eastern chapels of Canterbury Cathedral. That magnificent work, however, is rather French than English, having been executed from 1175 to 1179 by a French architect, William of Sens, though carried eastward in the same noble style by his successor, called, for distinction, William the Englishman. This example differs greatly from any other in England, and is the noblest study of the carving of the period which could be wished for.

No proof could be greater of the simultaneous but distinct rise of pointed architecture in France and England than the fact of this example, *known* to be French, differing so widely from any purely English specimens.

In those few examples in which the early characteristics are retained without any remnant of Romanesque, the great distinction between this and the succeeding style (in England) is the square form of the abacus of the capital and the consequent squareness of the order or group of mouldings which it supported—a characteristic which added great force to the effect. This distinction is, however, peculiar to England, as abroad the square form was common to all the earlier styles.

The German examples of this style are much more Romanesque in character than either the French or English—indeed, many buildings, apparently quite Romanesque, are of a period in which Pointed architecture had here become predominant. This creates an impression that the Romanesque carving in Germany is much more refined than here, while the fact is rather this, that the carving which *appears* to be of that style belongs more correctly to the Early Pointed. Indeed, in Germany the Earlier Pointed (equivalent to what we call Early English) seems almost missed out of the series.

At this period other arts seem to have attained great perfection. In France the painted glass seems now to have attained a beauty both of execution and effect never exceeded, though in refinement and artistic treatment great advances were subsequently made.

At this time, also, the goldsmith's and enameller's art acquired a degree of perfection never to be surpassed. The shrine of the three kings at Cologne, presented by the Emperor Frederic Barbarossa, 1170,* is one of the most magnificent specimens of ornamental workmanship which can be conceived. Its enamels, filigree-work, and open pierced foliage, are beautiful in the extreme, and even the little figures introduced among the foliage are treated in the most spirited and elegant manner, though the largest figures are somewhat stiff and imperfect. Closely resembling this is the shrine of Notre Dame, at Aix la Chapelle.

The next phase of Pointed architecture may be described as almost peculiarly English.

In France, the onward progress was so rapid that the first stage was not dwelt on long enough to develope it into a distinct and consistent style; while in Germany the adoption of Pointed architecture was so slow that they almost entirely missed over its first variety, and on waking from their Romanesque entrancement, took a sudden leap into the advanced position already attained by the French.

To our own country was reserved the task of developing into a perfect style the simple element of which the lancet window is the type. This style is, then, not inaptly called *Early English*, though better defined as the *Lancet* style. It is the English variety of the wider class of *First* or *Early Pointed*.

During this period the foliated ornament made great progress, ridding itself in great measure of Byzantine feeling, and ever striving towards resemblance to natural forms, but without as yet any direct attempt to imitate them. So like, however, is the foliage of this period to nature, that one is tempted to search in all directions for the leaf which must have been its type. Yet so distinct is it from any actual plant, that the most contrary leaves from time to time suggest themselves as being the original. Various kinds of trefoil, a peculiar sort of fern, a particular form of the ever-varying parsley-leaf, have in their turn suggested themselves. The fact is, however, that the foliage of the period is not an imitation of *particular* leaves, but a beautiful conventional representation of foliage *in the abstract*. It is so perfectly founded on natural principles, that one is loath to believe that no such leaf ever actually grew. It approaches to many, yet represents none. It is the perfect symbol of foliage in *general*, without individualizing any one particular leaf. A great change was, however, coming over the system of ornamentation,—a change, the advent of which marks the period of perfection in Pointed architecture.

It was impossible that artists so noble in sentiment and so perfect in skill as the carvers of this period, should long be content with an *abstract* representation of foliage. They would soon find themselves *constrained* to enter into particulars, and to imitate *directly* those beautiful works of God by which they were on every hand surrounded.

The French here, again, seem to have been in advance of all others. We find, for instance, at Chartres, about 1220, that while in the larger portions the abstract or conventional foliage is still flourishing in all its glory, the smaller ornaments are copied with exquisite fidelity from the most delicate natural leaves.

In England, natural foliage did not appear, excepting in accidental instances, till considerably later: indeed, I am not aware of any instance of its being used on any extensive scale earlier than in our own abbey church in Westminster; and here, as I shall presently have to show you, it is pretty clear that it was executed by French carvers. We have, indeed, here, the threefold introduction of French development. In the first place, the church is built on a plan peculiarly French, probably derived from the cathedral then recently erected at Amiens. Secondly, we have here the first introduction, as a leading principle, of *tracery* windows, the Lancet style still prevailing in England, though tracery had for some years been prevalent in France; and thirdly, we have here (as before remarked) the earliest use to any extent, of distinctly natural foliage.

The part of the abbey in which this chiefly occurs, though commenced in 1245, was consecrated A.D. 1269. The foliage is, perhaps, one half natural, and the other half of the usual conventional kind.

In the extension of the eastern arm of Lincoln cathedral, which dates much later, natural leaves hardly appear, though the conventional foliage is here executed with a degree of refinement hardly to be equalled. The tracery here is precisely like that at Westminster, though carried out more boldly as to the number of lights.

At Newstead Abbey, we have the natural leaves carved with a degree of delicacy hardly anywhere to be surpassed—used in about equal quantities with the conventional.

At St. Mary's Abbey, at York, we have natural foliage as the rule; the conventional only occasionally as an exception.

While in the Chapter-house at Southwell, built about 1290, the conventional scarcely appears, nearly the whole of the foliage being a perfectly exact copy of nature.

Close about the same period, we have a group of works, in which the same is the case.

The chapel of the Etheldreda, in Ely-place, Holborn, built by Bishop de Luda, between 1290 and 1298; the tomb of the same bishop about the same time; that of Edmund, Earl of Lancaster, in Westminster Abbey, dating 1296; that of Archbishop Peckham, at Canterbury, of 1292; and the Eleanor Crosses, of nearly the same date,—in all of these we have natural foliage in its highest perfection, and in only one (that of Peckham) do I recollect a single trace of the conventional style of the earlier period.

This series of examples would tend to prove that the highest perfection of the use of natural foliage in this country was attained between 1290 and 1300.

In the portion of Westminster Abbey erected by Edward I. between 1270 and 1300. We still find the two kinds of foliage going hand in hand. Of this the series of bosses over the choir form a magnificent example, and are, perhaps, the finest set of bosses in this country.

Of about the same period are probably the noble oak stalls in Winchester Cathedral, the earliest ornamental woodwork of any great extent in this country, though small specimens exist here and there of an earlier date. The Winchester stalls are magnificently carved, and exhibit the natural and conventional foliage side by side.

During this period carving arrived at equal or greater perfection in France. In the Sainte Chapelle, at Paris, the Royal chapel erected about 1250, by Saint Louis, it is magnificently developed, though the conventional foliage also appears. The general character of this chapel displays proofs of its early date, yet the foliage

* This is the date usually given, but I doubt its correctness. The style would rather suggest a somewhat later date. That at Aix la Chapelle is assigned by Father Martin to 1220.

is so perfect, and so exquisitely elegant, that one would hardly have believed it to be so early.

I will take occasion from mentioning this superb work, to point out the great distinction which exists between the French and English capitals at this period. I have already mentioned the square abacus as being, in this country (though not abroad), a distinctive mark of early date.

In the early capital the bell is circular, and the abacus square, and under the round bell the foliage is disposed in fully developed Early English. The whole is usually made circular together, the foliage being, as before, placed round the bell; but in France the change was never made excepting here and there as a variety, the square or other rectilinear-sided abacus being constantly used throughout the earlier periods. This with a greater height of capital gives a much bolder effect than is usual with our own.

There is also another very marked distinction, I mean the retention of the bold overhanging astalk, which was in frequent use during the earlier period. In English work it is very rare to find this in conjunction with natural foliage, but both in France and Germany they are very frequently used together, and with noble effect, for the strong stalk gives outline and strength of character, and harmonises the ornament with the architecture, while the natural leaves give it elegance and beauty. In those capitals where it is not used, the foliage grows more naturally than in the English examples, and is distributed less horizontally.

It is clear that at Westminster Abbey at least one French carver was employed, for though the caps of the arcading round the walls are of the English form as to the mouldings, the carving is decidedly in the French manner, as if the work were prepared by English masons, and followed up by French carvers.

The *crockets* of this period are of two leading kinds, the one overhanging, as the stalks of the capital just described, which the French call for us reason the *crocket capital;* the other, a natural leaf, simply applied to the moulding of the gable.

[A crocket was exhibited formed by merely attaching a leaf to a moulding and copying it, and which is almost exactly like many in ancient works.]

The cornices in France and Germany are often enriched by one of these stalks or crockets alternately with a single natural leaf, or a group of them. This, with many other foreign ideas, seems to have been imported into York-shire about the year 1300, probably, I think, from Cologne, and appears in the nave of the Cathedral and in the Priory Church at Bridlington, at Howden, and some other churches, in conjunction with capitals of the foreign type. The reign of King Edward I. was the great period for true natural foliage in England, and beyond all question the time of the highest development and perfection of Pointed architecture—the golden period of the Middle Ages. Happy days, *indeed*, were these for the architectural artist, and happy the artist whose lot was cast in such times!

Free from all trammel of preceding art, untempered by the slavery of precedent, his only guides were the productions of nature which surrounded him at every step, his sole artistic authorities the works of *God*. If he looked around him in the country, he saw in every leaf which hung over his head, and every flower and herb beneath his feet, and even the birds which ranged among the one and the insects which hid among the other, the material from which his art was to be learned. If it was in the city he lifted up his eyes; nothing presented itself to chill and deaden his feelings, but everything to show forth the aspirations which he himself felt were the mainspring of all the art by which he was surrounded.

Different, indeed, is our position: we have been taught to look to nature as our guide: leading to contravene authority, enslaved to precedent, we seem to have no will of our own, but to seek examples everywhere but in the works of our Maker. If we look abroad in the land, how much do we see to depress, how little to elevate our feelings. Happy then will it be for us if what fails us in the streets of our towns we seek in the highways and hedges. There we still have the same precedents and the same authorities which guided our forefathers when art was free and untrammelled; and if we desire a style of art suited to the nineteenth century we cannot go wrong if we strive to develop it from the same materials which were worked upon by our predecessors of the thirteenth.

We have, however, resources which they had not: we have an infinity of beautiful plants which they did not possess, and of which we need not fear to avail ourselves, though as yet we have failed to learn the use of those simple examples which we may pick up every day in the lanes and woods, and in the use of which our happy simple-minded forefathers revelled.

I might have mentioned that at this period all other architectural arts arrived at the highest point of perfection attained in the middle ages. Painted glass, jewellery, enamelling, ivory carving, all now attained their perfection; and figure sculpture, though not destined to rival that of ancient days, attained a degree of beauty which even now challenges our highest admiration.

From this period we must, however, trace, I fear, a gradual decline. The next generation of carvers attempted to improve upon the works of nature, and, as might be expected, failed. We accordingly find in their works a departure from the truth and simplicity of those of their predecessors.

Up to this time we have traced conventionalism ever striving to assimilate itself to nature: henceforth we have conventionalism gradually departing from the goal it had reached. The one is an ennobling, the other a deteriorating progress, and I desire not to follow it. Having learned when the highest perfection has been attained, let us make *that* our starting-point, and endeavour still to progress, not now by departing from nature—our legitimate guide, but by a yet more earnest, more loving, and more intelligent use of the treasures she yearly lays in such profusion at our very feet.

GEO. G. SCOTT.

WARWICK, STRATFORD, KENILWORTH, AND COVENTRY.

LONGFELLOW writes,—

"If thou art worn and hard beset
With sorrows that thou wouldst forget,
If thou wouldst read a lesson that will keep
Thy heart from fainting and thy soul from sleep,
Go to the woods and hills! No tears
Dim the sweet look that Nature wears."

We have often said the same thing in other words, but are glad to enforce it occasionally by the advice of others. An occasional commune with nature is of vital importance: it fines us, as a distiller might say—sends some of the earthy particles down to the bottom, and leads us to scent "the rose above the mould." As Alexander Smith puts it:—

"Better for man
Were he and Nature more familiar friends!
His part is worst that touches this base world.
Although the ocean's inmost heart be pure,
Yet the salt fringe that daily licks the shore
Is gross with sand."

And then it is so easily done in our time: you may see almost anything in England in a day, enjoying nature as you go and come. It costs money, it is true, to travel fast; but health and energy and knowledge to boot are beyond price. Well might Horace Mann, when asked by a student to advise him how to obtain success in his profession, say, "First you must have health. A spendthrift of health is one of the most reprehensible of spendthrifts. I am certain I could have performed twice the labour, both better and with greater ease to myself, if I had known as much of the laws of health and life at twenty-one as I do now." The little bit of England rejoicing in the titles at the head of this paper—Warwick, Stratford, Kenilworth, and Coventry—is full of a particular sort of interest,—an interest felt by all. It is associated with Shakspeare, and Queen Elizabeth, and Walter Scott, and the Leicesters, and the Dudleys; a very complete specimen of a habitable castle, a fine ruin, the extraordinary monuments in the Beauchamp Chapel, and three sky-piercing spires, to say nothing of some of the best specimens of wooden architecture in the kingdom, namely, Ford's Hospital founded in 1529, and the Bablake Hospital and School (1506 and 1560), both in Coventry, and "Leycester's Hospital" in Warwick, inscribed "1571. R. L. *Droit et Loyal.*"

Well, now, a soul-squeezed Londoner may go away one morning, see all these places, and return to his own bed the next night without the slightest difficulty, and may, if he please, add a lounge in Jephson's Gardens, at well-kept Leamington, on the intermediate evening, while the *belles* of the place and some modern Robin Hoods show themselves worthy descendants of those who "drew a good bow at the battle of Hastings," and put arrows into us for his amusement. We are not recommending such hasty scampers, but simply showing what is practicable; nor are we about to emulate the Kentucky lawyers referred to by Mr. Scott, in his paper last week, and give a full and particular account of these places from the beginning of things, or any account at all; but we may just touch a point or two here and there, as we gambol along, enjoying the fresh air, admirable companions, the associations, and a glorious country. And it *is* a glorious country, rich and varied—everywhere luxuriance—everywhere the signs of prosperity. The foliage in parts is beginning to turn, and gives us some fresh tints, and the red brown of a newly-ploughed field here and there, deliciously helps the landscape. The view of Warwick Castle as you approach the bridge is charming, and you see at once that it dates from the Conquest, and runs through several centuries. When you get inside, the smoke from the chimneys, the window blinds, and well-swept lawn, show you that the course stops only at to-day:—

"The Past and Present here unite,
Beneath Time's flowing tide,
Like foot-prints hidden by a brook,
But seen on either side."

The collection of works of art here is rich,—we may say priceless. The Vandycks in the Cedar Room and elsewhere, the thoughtful Spanish Warrior in the gilt drawing-room, Loyola, by Rubens, the same painter's Lions, Holbein's Henry VIII. and a portrait of a Queen of Naples, by Leonarda da Vinci, will not be overlooked. We should scarcely say what Oehlenschläger makes Correggio say of another picture by the same wonderful master,—

"Heavens, what a glorious picture!
A princely dame, young, blooming, full of soul:
How the eye burns; how smiles the little mouth!
How nobly on her sits the rose-hued hat
Of velvet, and the full deep velvet sleeves!
By Leonard' da Vinci. Well might he
Be called Magician: this indeed is painting!"*

Nevertheless, it is a great picture, and has great companions. And as we roam,—

"'Mid all this grand enchantment,—proud saloons,
And galleries radiant with the gems of art
And genius, ravished from the grasp of Time,—
And princely chapel, breeding prais'r to God,—
Or lose ourselves amid the wildering maze
Of plants, and flowers, and blossoms, breathing forth
Their eloquence to Him,"—

we may get some idea of the richness of England in art-treasures,—remembering that this collection is but one of scores of similar amassments scattered about the kingdom. We were glad, by the way, to see in the castle the Warwick Sideboard which was in the 1851 Exhibition.

Visitors to the Crystal Palace, at Sydenham, will recognise in the centre of the Beauchamp Chapel the fine monument to Richard, Earl of Warwick, with its gilded effigy, and "herse" above, and series of metal statuettes around. They will find, however, a sentiment about the tomb itself which could not be transported. The preservation of the agreement with the several artists who were employed on this chapel and the tomb, renders them of great value historically. Thus the glazier, "John Prudde, of Westminster," undertook to glaze all the windows in the chapel, "with glasse beyond the seas, and with *no glasse of England*," and further to put in of white, black, and green glass, "as little as shall be needfull for the showing and setting forth of the matters, images, and stories." A little *more* white in some of our modern windows would be an improvement,—that is to say, white of a right sort.

It is scarcely possible to enter Stratford-on-

* "Correggio, a Tragedy." Admirably translated, with notes, by Mr. Theodore Martin, himself a poet. J. W. Parker, Strand. This very interesting art-play contains many beauties.]

Avon without something like a feeling of reverence—such is the power of genius. We agree with the writer who maintained that there is no man living in the civilized world whose development has not been more or less affected by the writings of Shakspeare:—

"O capacious soul,
Placed on this earth to love and understand,
And from thy presence shed the light of love;"

How can we estimate the debt the world owes thee?

The home of his boyhood, if not his birthplace, which has been purchased for the nation (we can scarcely say *by* the nation) is sadly devoid of material interest: it is, unluckily, common from bottom to top, and has no one bit of beauty: a carved angle post or a good bargeboard, or a nice bit of panelling inside, would have been invaluable. Nevertheless, it possesses undying interest in its association, and should be most religiously preserved. How to deal with it is of course a question, but it is a question that should at once be considered. The rough-cast is falling from the outside, and the wet gets admission. A crowd of thoughts press upon one in the little white-washed and name-covered room, but we may not pause to give them utterance. Away, then, to the church, with its beautiful avenue of trees and excellent outline.

The interior was restored a few years ago by poor Edington, of Worcester, in conjunction with Mr. Britton, who laudably exerted himself to bring it about. The whole chancel has become the poet's cenotaph, the central point the poet's bust. If Malone could hear the abuse constantly showered on him for hiding the colours with which the bust was originally painted in imitation of nature, by sundry coats of white, he would not rest quietly in his grave. That the bust is a likeness scarcely admits of doubt, but we cannot say this of the casts of the bust which are sent out to the world: the mould should be revised by a competent hand.

John Combe's monument, on the north side of the altar, and the inscribed stones in front of it, will detain you some little time: you should notice, too, the general arrangement of the clerestory, Late Perpendicular, and some of the carving scattered about.

A suggestion by a Frenchman, M. Chardigny, to erect a colossal cast-iron monument of Shakspeare, 100 feet high, has been received with much flourish by both English and French papers as an entirely novel idea; the truth is, however, a very similar proposal was made some years ago by either Mr. Crabb Robinson or the Rev. Joseph Hunter, we forget which, but it was allowed to fall dead. Come from whence it may, we should be glad to see a fitting national memorial of our greatest writer. Longfellow is still running in our head:—

"Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time;

Footprints, that perhaps another,
Sailing o'er life's solemn main,
A forlorn and shipwrecked brother,
Seeing, shall take heart again."

Let genius touch what it may, and the thing touched becomes gold. The world cared little for Kenilworth and its misty history till Scott re-peopled the ruins, without the *strictest* regard to truth, and awakened in us a human interest. The mass of the ruin has not much architectural beauty: the remnant of the Norman Geoffrey de Clinton's portion of the structure, from some unexplained cause, gives more pleasure to the eye than the more perfect parts of later date:—the whole, however, forms a very picturesque ruin, seen as you approach from the great gateway; and you may revive, by the mind's eye, the great tourney of Edward I. and the "Round Table," or the reception of Queen Elizabeth by Leicester, whose true effigies you may see at Warwick. There is a curious account of the entertainment unto "the Queen's Majestiez, at Killinwoorth Castle," written by one Laneham at the time, who, to describe the gay appearance of the castle, says it was "a day time on every side so glittering by glasses, a night by continual brightness of candel, fyre, and torch-light, transparent thro' lyghts on wyndoz, az it wear the Egyption Pharos, relucent unto all the Alexandrian coast; or els (to talke merily with my mery friend), thus radiaunt, az though Phœbus for his eaz would rest him in the Castle, and not every night, so to travel docun unto the Antipodes." And the Coventry men came and acted one of their plays, too.

Kenilworth Church hard by, has a very interesting Norman west doorway, unfortunately much decayed. A little attention to it at this moment by way of pointing and supporting is very desirable.

A quarter of an hour, and we are in Coventry, where there seems to be some activity in building matters just now, as we mentioned a fortnight ago. Rapid progress is being made with the Corn Exchange, and the walls may be seen above the hoard. The hall promises to be a fine apartment. The national schools for Trinity parish are finished, and form a picturesque group creditable to the architect, Mr. Murray. These are built of stone, including two schools, 77 feet by 18 feet, and a room above, 77 feet by 36 feet, besides residences, and have cost about 3,000*l*. The metal vanes and crosses were executed by Messrs. Skidmore, of Coventry, of whose work exhibited at the Architectural Museum we spoke well a few weeks ago. We went over their manufactory when we were in Coventry, and were as much pleased by the artistical spirit which animates them and their desire to do something eminently worthy of this which is, in truth, an age of metal, as by what we saw, including cups, ewers, salvers, and gas-fittings. A long list of churches lighted by them show that their endeavours are duly appreciated out of doors. At St. Michael's Church, where considerable restorations are going on, they have put up some good branches. In this extensive church, the length of which is equal to the height of the spire, namely, 296 feet (the greatest breadth is the height of the tower alone), there are several Renaissance monuments of considerable beauty, although in a bad state. We once saw this extraordinary steeple in the moonlight, when the series of figures which surround the upper part of the tower all round seemed touched into life, and stood out clear and distinct from the niches which contain them. The stone of the tower is in a miserable condition.

At the church of the Holy Trinity there is a very remarkable ancient mural painting, the Last Judgment, over the tower arch. The stone pulpit, too, around the pier of the chancel arch, is very curious and effective. The ugly galleries should be removed.

At St. John's, the south transept window has been murderously dealt with, by a restorer in cement. One of the main columns on the south side of the nave has sunk so much out of the perpendicular as to call for professional examination. Ford's Hospital, we have already mentioned: it must on no account be missed. St. Mary's Hall, too, must be visited, and its ceiling, tapestry, old carved seat, and adjoining council-chamber, duly examined. The tapestry is as early in date as 1450. There have been merry doings in this hall. One cannot walk through Coventry without a recollection of the famous Coventry pageants and mystery plays, of which there are accounts as early as 1416. The mysteries were performed first by friars. The pageants were exhibited by the guilds or fraternities of traders in the town. Each had its favourite: for example, the smiths' pageant was the "Crucifixion," and the drapers', the "Resurrection." In the list of properties belonging to the latter, we have "a link to set the world on fire," following, "paid for the barrel for the earthquake!"* As you turn the corner of a street, busily engaged in prying into holes and corners, an uncouth bust of a man looking out from a hole in the wall will remind you of another peeper, and the legend of the resolute Godiva. How long romance lasts! The incident goes back to the eleventh century—perhaps, says the sceptic, never took place at all.

Well,
Dream or reality, it matters not,
Whatever makes us happy must be real."

We should really think it no hardship to be again "sent to Coventry."

* Knight's "Traveller's Joy."

CONDITION OF PARTS OF WESTMINSTER.

A CORRESPONDENT (W. L. G.) who has been amongst the vegetable vendors of Strutton-ground and the Broadway, Westminster, gives us a miserable description of their condition. On entering a house in one of the courts adjacent, he found a floor on which his shoes stuck as he walked, from filth allowed to accumulate on them. At the back there is a small yard (or more exactly speaking, 4 feet by 5 feet), in which is a heap of decayed vegetables, fruit, oyster-shells, and other rubbish, in a state of rapid decomposition. In this house were lying two persons dead with cholera. In old Pye-street and St. Ann's-street the same scenes were visible. There also were five people dead the same morning; and upon his asking how often the rubbish-heap was carted away, he was told as soon as they got a cart-load, which took in some cases seven weeks, in others eleven, according to trade! In three weeks there had been thirty cholera cases which had proved fatal in this locality. In this street he was told that it being Monday, there had been no water on the premises since Saturday. The small tub they had not holding sufficient for the numerous family in the house, so on Sunday they were without. In this tub there was greenish mud; an inch and a quarter thick: it had not been cleaned out for six years. The water he procured in another house (more fortunate than the rest) was of a thick brownish-green tint, not fit for any human use. He suggests that each policeman on his beat should report the sanitary condition of each house once a month.

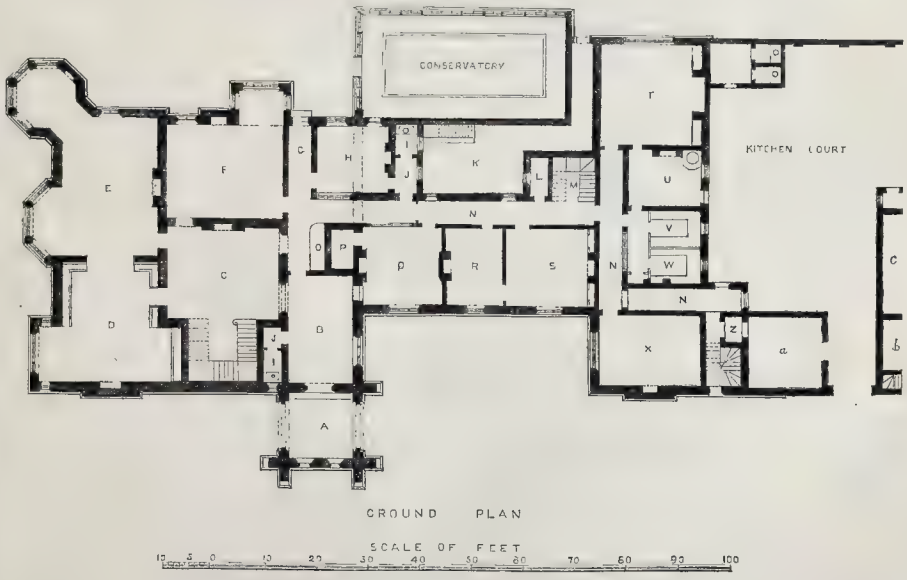
After writing his note, he learned that in one of the houses last mentioned six persons died in one morning—two women and four men!

ENBROOK, SURREY.

OUR engraving represents a residence now being erected under the direction of Mr. S. S. Teulon, for the Hon. J. D. Bligh, the English minister at Hanover.

Enbrook belonged to the late Earl of Darnley, who left it to his son, the present possessor. It is situated in the parish of Folkestone, by Sandgate, and commands the sea southward. The original house, which had been on a small scale, had been from time to time added to, but was so ill arranged, that it was found impracticable, upon a survey made in the early part of the present year, to remodel it conveniently except at a very considerable outlay; and its position being too close to the main road, it was determined to build a new mansion more in the centre of the estate. It is now in progress of erection with a grey rag stone, the quarry on which forms part of the land, with a free stone from Caen.

Messrs. Higgs and Cullingford, of London, are the contractors for this work. The cost will be about 7,300*l*.



The following references will explain the plan:—

"PROGRESS OF MELBOURNE."—I can inform you that the "exchange and custom-house talked of" before this time in progress. Mr. Merritt, a gentleman not unknown to many of your readers, obtained the premium for the Exchange, and the Government have also recommended him to carry out the Custom-house, which in May was to be commenced forthwith.—W. D.

ENBROOK, SURREY.—MR. S. S. TEULON, ARCHITECT.

PLAN OF ENBROOK.

THE ARCHITECT OF ST. GEORGE'S HALL, LIVERPOOL.

At this moment, when Liverpool is about to inaugurate her noble hall, our readers will doubtless receive with gratification any information concerning the architect of the building, Mr. Henry Lonsdale Elmes, who, although cut off at the very outset of life, has secured for his memory a lasting reputation.

We have been favoured by Mr. R. Rawlinson with copies of a number of letters from Mr. Elmes, mostly on the subject of St. George's Hall, from which we shall make some selections.

Mr. Rawlinson says in his communication to us,—Mr. Elmes was not great by accident: he studied unceasingly and earnestly: the compasses he chiefly used were his eyes, and every line was considered with reference to adjoining lines, and to the whole. His mouldings are Greek in character, but they are essentially his own, nevertheless.

In appearance, Mr. Elmes was gentlemanly and refined; as a jockey would say, "showed breeding." He was of middle stature, light complexion, fair hair, and bluish-grey eyes. In mixed company, and before strangers, he was silent, quiet, and observing; but with those he loved or respected, he was cheerful, talkative, and pleasant. Enthusiastically fond of good music, Mozart, Beethoven, and Mendleshon were his great favourites, and he could not bear that one note should be misplaced. Architecture and music he loved most. Painting and sculpture came in for a secondary share of notice.

Although Mr. Elmes was retiring, he was neither shy nor diffident. He could speak, and to the point, either to individuals or to committees, and was ever ready and prompt with the requisite information or explanation. He could also defend or advocate with clearness, force, and ability. All good men loved him, and with bad men he had as little as possible to do. If his character could be known, as his great work can be seen, it would be more admired by all those capable of appreciating true greatness. R. R.

We preface our selection with a letter addressed to Mr. Elmes by the gentleman we have named, as reference is made to it in that which follows:—

"April 2, 1844.

Being in Liverpool more or less every week, you are frequently in my thoughts, as I see your genius at work, raising that temple-like structure to pleasure the 'merchant princes;' whilst you, Aladdin-like, are afar off, rubbing the magic lamp. How truly do the powers of the mind equal—nay, even surpass, the most sublime fictions of Eastern story. The fervid thoughts of the poet's fancy, once penned, never die: the magic touch of the painter's brush is immortal: the melody of the musician is eternal; and the creations of the architect stand fast for the admiration of millions yet unborn. For man to accomplish never-dying works, is worth the enduring all the disappointments, and envy, and sorrow he is heir to;—working in season and out of season, to accomplish with diligence the great end of existence;—bearing in mind how short his time; living in love and charity with all mankind; striving after perfection, as the only means to satisfy his immortal spirit. Man!—the little!—the great!—the divine!—how poor! yet how rich!—how weak! yet how strong! A sudden blast of the elements destroys him! but the creations of his intellect set them at defiance: his material form vanishes from the earth; but the eternal mind, God-like, with firmness grapples time. Who does not recognise the great soul of Handel in his heart-thrilling choruses—new "for ever and ever?" or the mighty spirit of Sebastian Bach, in his temple-shaking fugues? or the comprehensive mind of Wren in the massive grandeur of St. Paul's?

All men cannot attain to this high distinction in the eyes of their fellow mortals, but all will be rewarded according to the use or abuse of the talents entrusted to them.

This train of thought has been brought to my mind by contemplating the completion of your majestic building, destined to arrest the admiring gaze of countless thousands. In this respect architects have an advantage over the professors of every other art or science; and this the ancients knew and studied: hence the majestic, awe-inspiring ruins of the faded empires,—Egypt, Greece, and Rome,—the learned—the refined—the mighty! Oblivion shadows their once teeming myriads,—the magician priesthood, the cunning schoolmen, the imperial conquerors! From our visible senses all have passed, but the ruins of their architecture are enduring amidst surrounding desolation; standing like huge skeletons, creating wonder through all time, attracting the aspiring student from every civilized part of the globe, and becoming an eternal alphabet to every modern nation. Such is the exalted power of architecture!

* * * * *

R. R."

"London, April 30th, 1844.

My time, as you may suppose, while at Liverpool, is completely occupied; and, as I am still without any competent assistant in my office, my duties are more arduous and mechanical than is either pleasant or desirable.

The strain of poetical feeling in which you have clothed your complimentary allusion to the great work I have the happiness to superintend at Liverpool, has tended, for a while, to sharpen the edge of my enthusiasm for our art, which was already beginning to grow dull, with endeavours to cut through the grovelling, money making, selfish ideas of nine-tenths of the community; and I was beginning to believe that the regions of poetry and imagination, although they may be regions of bliss, yet they were by no means dwelling-places for those who have their daily bread to seek. Yet I should be ungrateful were I to forget that an occasional visit into those realms constitutes the greatest gratification of my life.

It has not unfrequently occurred to me that I should like to know with what feelings those who are unaccustomed to the technicalities of the profession observe the progress of a large building. I fear, in too many instances it is merely looked upon as a pile of stones in its most mechanical sense, and there are few who, like yourself, can perceive the operation of a directing mind,—and yet there are few who are insensible to beauty or deformity; and, as you observe, architecture is peculiar in being exposed to public gaze so much more than any other art or science, it is surprising that so little attention is paid to it, and so little value attached to the labours of those who study so important an art.

When, however, the public become better informed upon the leading principles of the art, we may hope for better things.

How frequently I observe the great and true end and aim of art entirely lost sight of in the discussion of some insignificant detail or quaint antiquarianism. Bold and original conceptions never can find favour while so much stress is laid upon *precedent*. I say, let architects study nature, but let no man expect to form a new style or school; that must be the work of successive generations; but let each add his mite towards it and this country may yet rival her continental neighbours in producing original and beautiful works, equally adapted to climate, materials, and habits of the people.

Yet, strictly speaking, architecture is not an imitative art, and has no type in nature; and therefore, it may be urged, why study nature? I know your opinions upon this too well to occupy your time with an answer.

As you are frequently in Liverpool, I can tell you no news concerning that place: you will, doubtless, have heard that the committee have determined to introduce polished Aberdeen granite for the interior columns supporting the great vault; upon which, by-the-bye, I shall be very happy to hear from you, relative to your thoughts thereon, which you mentioned to me when I saw you. You may imagine that scarcely a day passes without my thoughts being fixed in that direction, and, as yet, I have no fear of ultimately accomplishing it. I am having some diagrams prepared, which show the relative proportions of the arch and its abutments, which I should like you to see. H. L. Elmes."

"11, Gordon-street, Dec. 11th, 1844.

"My friend, Mr. Cockerell, is about commencing a new bank in Manchester, a branch bank of the Bank of England; and I have been endeavouring to persuade him to use our stone from Darly Dale. I hear, from Heathcote, that he can lay it down in Manchester at 1s. 7d. per foot, if you should require any of it.

I am very desirous of knowing more of Manchester, and hope, during the next summer, that I shall be able to spend a few days with you there.

With respect to your observations on the Exhibition, I wish you would try your hand at architecture, and stir up a little spark of feeling for it. Although in a domestic sense it must yield the palm to painting, at least where carried beyond mere utility; yet the pleasurable sensations, indescribable almost, produced by a well-proportioned and symmetrically arranged room, to go no further, are worthy of appreciation.

Architecture, as a noble science, and beautiful art, in the highest sense of those terms, at present exists, unfortunately, only in ruins, or in history or imagination; but utility, and utility alone, will ever save it from utter oblivion; and in all ages it must be acknowledged as indispensable to human existence.

These observations *cannot* apply to paintings, or to sculpture; not that I would part with our handmaidens, but only claim an equal rank and equal consideration. Consider, too, the effect produced by painting and sculpture, as auxiliaries to architecture; the first, by rendering the massive wall rich with varied colours, and indicating *space beyond*, so delightful to anticipate; thus charming the eye, while the noble subject may interest and instruct the mind. The latter, devoid of colour, yet pre-eminent in form, the material harmonising with the architecture in massive durability, while the gracefully flowing drapery, the marked expressive countenance, and the apparent capability of motion, all contrast with the greater severity of the architectural framework. Were this feeling general, glass for gilt frames, and watch-boxes for statues.*

The predicted fall of my vaulted ceiling, made by the "great authority" in Liverpool, I find, has not been confined to that town: it has been reported in London to have been abandoned. Notwithstanding these idle reports, I am proceeding steadily in my purpose, and with due care and attention, I entertain very little doubt of ultimate success. I shall, however, like to have a little talk with you upon it when we meet. H. L. E."

"London, Dec. 25th, 1845.

Your last eloquent and imaginative letter, was really startling, and quite aroused me from the dry' dull, every-day way of thinking that common-place but bread-and-butter getting business is driving me to.

My capitals for the columns inside must be bronze: the core being of granite, prevents the introduction of marble. They will require plenty of brass, and so shall I, when I ask for the money for them, I think.†

I am happy to say that I entertain no doubt but that the pediment will be adorned with one of the richest compositions in sculpture ever executed in this country.

I am not afraid of a single brick in thickness at the crown of my great arch; but I am very anxious, if I can, to introduce hollow tile-work, although, if I understand you correctly, not exactly what you mean. As the work proceeds, I am obliged to take up each part separately, and that will shortly have its turn, when I should like to have a little talk with you about it, and must manage to come over to Manchester and see you.‡

I hope you were pleased with the effect of the granite columns. H. L. E."

The following letter is particularly interesting, as conveying Mr. Elmes's own idea as to the internal arrangement when finished. It has not been followed out:—

"London, November 30th, 1846.

Procrastination, they say, is the thief of time; that it is the thief of men's good intentions, I verily believe, for it has robbed me of three or four really good ones every day since the 3rd inst., the date, I am ashamed to say, of your last kind letter.

I am glad you seem to like my granite shafts. I would rather have them in their present integrity and honesty, all capless though they be, than the most gorgeous scagliola with *real* cement capitals that were ever designed. I hope when you "contemplated the finished structure," that there was *no organ* at the *end*, but that you stood on the judge's platform in one court, your eye glancing along the ranges of ruddy columns on either side, in all the richness and strong colour of a foreground; then reposing for an instant on the lofty arched opening communicating with the hall, whose broad and richly coffered soffite throws a shadow upon the grey columns beneath, and forms the middle distance,—it pierces the atmosphere of the great hall, passes the corresponding opening into the other court, without distinguishing a particle of detail from the great distance, and finally rests upon the judge's throne in the other court. Such, my dear friend, is a faint expression of what I hope and trust some day we may see together. I have no doubt it is altogether below the standard which your imagination has led you to expect; but, believe me,

* When Mr. Elmes speaks of painting being connected with architecture, he alludes to fresco, and not to painted masonry. It was the intention of Mr. Elmes to have introduced fresco on the vaulted ceilings, as also on the side walls of the great hall. We had many conversations as to this.—R. R.

† Mr. Elmes did suggest bronze for the enrichments of his capitals. The corporation asked the Government for some old gun-metal; they were refused, and so was Mr. Elmes. They are plaster, or cement, stained to look like the granite.—R. R.

‡ Mr. Elmes finally decided on solid brickwork for the ceiling. The crown of the arch to be one and a half brick, or fourteen inches. Patent compressed bricks were to be used. The work was specified and let. It was after Mr. Elmes left England, indeed, after his death, that I designed the bricks for the present ceiling.—R. R.

no thought nor labour on my part shall be spared to make it worthy the admiration of all good men. To please all would be out of the question.

I am in great doubt as to the material for my capitals. Statuary would be a ruinous cost. What think you of iron? and if so, what process will preserve it from decomposition, without paint or periodical applications of that kind?

I am much obliged for your sketches of hollow tiles: they would be admirable, and delight Dr. Reid beyond measure, as nearly the whole ceiling might be porous. But what can I do with such a contractor for brickwork as I have to do with, who puts every difficulty that ingenuity can devise in my way, instead of assisting to carry out the work properly?

H. L. E."

"Ventnor, Isle of Wight, June 24, 1847.

Anxiety and over exertion have at last made such an inroad upon my constitution, that about a month since I was obliged to leave London at a few days' notice, for the purpose of obtaining a little repose for the present; and I believe I shall be compelled to winter abroad. The difficulty of arranging matters so that business shall not stand still during a seven or eight months' absence, you may easily imagine; and, I assure you, it contributes in no small degree to increase my anxiety. I am happy to say, however, that I have met with the kindest sympathy from all my employers at Liverpool, who all urge upon me the necessity of following the advice I have received, and making health a primary consideration. It is possible I may go to the island of Madeira or to Jamaica, I am not sure which. I originally proposed visiting Italy, but I have been advised against it, as my enthusiasm for art would induce me, possibly, to neglect my health, by over-exerting myself amongst the innumerable wonders of the "Eternal City."

"Your kind letter (of, I will not say, what date), which had been so long lying before me at home, I gladly made my companion here, thinking to have so much leisure that I should be sure to answer it. But instead of finding repose, I have been completely overwhelmed with correspondence, which has so much fatigued me, that until this day I have not had an opportunity of taking pen in hand to your service.

As you say very truly, time has recorded serious changes against us both since we met; but as you also say, and I agree with you, that they are *"false"* and *"envious;"* the wound they give at the time *leaves no scar behind.* Our friend got nothing by his move, for the question was not whether the alterations ought or ought not to have been made, but whether, having been made, they were executed in as sound and workmanlike a manner as the circumstances of the case allowed.*

I read your flattering and enthusiastic sentences with amazement, and regret that I am unable to reply to them with the warmth and energy they deserve; nevertheless, the sentiments they convey are entirely congenial to my own ideas. * * *

You may possibly have heard that I have obtained the lunatic asylum at West Derby (for that division of the county) to build, and that my plans have been highly approved by H. M.'s Commissioners in Lunacy. I am also to do the parish offices at Liverpool, *when* they can decide upon a plan, which they have been about eighteen months in doing, and kept me all that time pretty closely at work, what with suggestions, alterations, new committees who undid all their predecessors' had accomplished, correspondence, &c.; and about eleven different plans. Mr. H. Earles and Mr. Hornby's houses I think you knew of some time since. I am also building a little house for the mayor at New Brighton."

Soon after this letter it became necessary for him to leave England, and Mr. Rawlinson, at his urgent request, consented to act as his deputy during his absence, Mr. Cockerell having consented to attend to all matters of architectural detail.

"Kingston, Jamaica, October 22, 1847.

Our departure from Southampton was a most miserable day, thick Scotch mist falling, which compelled upwards of forty or fifty passengers to stow themselves in the cabin of the small steamer, which was to take us to the 'Avon.' This place was about 4 feet square; and as they kept us there upwards of an hour before starting, you may imagine the state of the atmosphere, and the misery we were in.

The extreme fatigue I had undergone would have compelled me, under any circumstances, to keep my bed for a day or two, and, by so doing, I entirely escaped anything like sea sickness. The officers on board admitted that the first four or five days we had had an unusually rough passage: during the rest of the voyage it was occasionally rough, but nothing in comparison to the Bay of Biscay. However highly the glories of the sea may be extolled, and who, as a patriot, would not extol them with a view to maintain our glorious independence? yet give me, personally, *terra firma.* I was told I should derive great benefit from the constant exercise, 'without fatigue,' which the motion of the vessel would give. I suffered fatigue, however, to a great degree; and, as we approached the Tropics, the heat of the cabins, the tremulous motion produced by the engine, the entire absence of any comfortable seat on deck, although we had between seventy and eighty passengers, rendered the whole of the voyage, with very few exceptions, irksome and tedious, and I assure you I was heartily glad to get on shore. * * * *

Mrs. E. being laid up just on our arrival, you may imagine I have not spent my first week on shore very agreeably. I cannot say much for our companions on board,—a great many foreigners, one or two agreeable Germans, but the rest sad-looking ruffians, chiefly Spaniards. Our captain was exceedingly kind and attentive to us, and all the officers were very pleasant nice fellows, which rendered it less uncomfortable than it otherwise would have been. We first touched at Madeira, a most striking mountain, rising abruptly from the sea. I did not go on shore, being too unwell; but from what I heard and saw I should not like it for a residence. Our next land was Barbadoes, after a fortnight's voyage without sight of land, with a beautifully smooth sea, the thermometer at 80 degrees with a good awning over us, but we sighed in vain for the usual trade winds, and had none but slight breezes against us. About twenty-four hours brought us to Grenada, a remarkable and picturesque island, but with such innumerable undulations that the vast number of valleys, I think, must render it damp and unwholesome as a residence.

I am inclined to hope strongly that the climate will agree with me, though in this close town I find the heat in our sitting-room, with every window open—86 degrees,—to be rather enervating.

H. L. ELMES."

This pleasing anticipation, however, was not destined to be fulfilled: he died on Friday, the 26th of November, 1847, and England lost a worthy son.

* Very severe attacks had been made upon him in the council; the ground of which was, that he had caused so many alterations in the building that it was "a thing of shreds and patches."

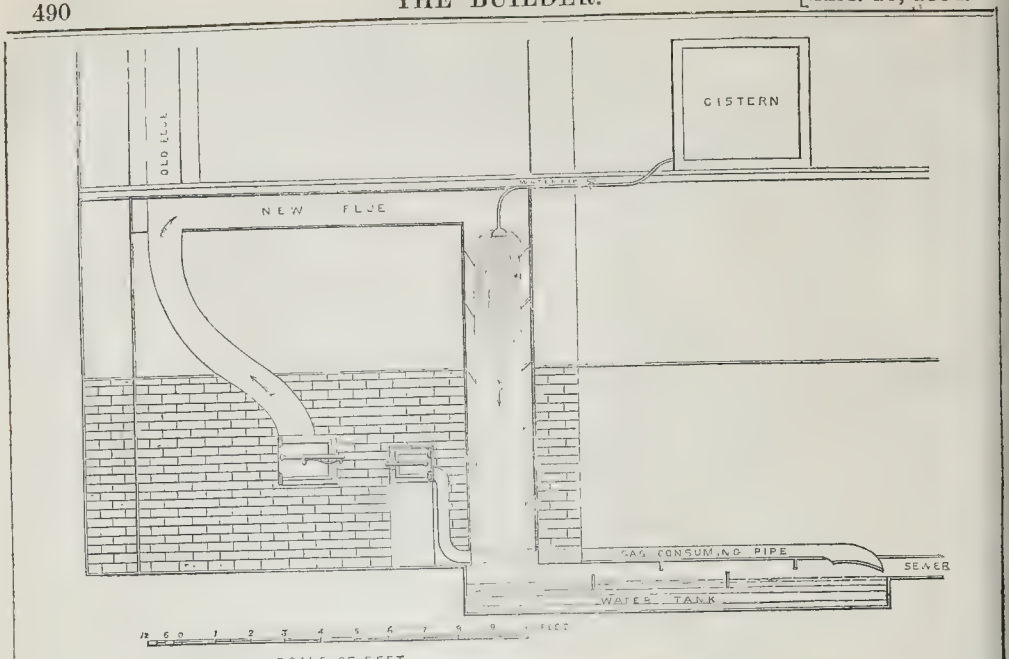
PROVINCIAL NEWS.

Lynn.—The opinions of the guardians appear to be nearly equally divided on the propriety of rebuilding the old workhouse, the tower or main part of which lately fell, or of purchasing a piece of land outside the town for erecting an entirely new one. The *Norfolk Chronicle*, speaking from a knowledge of the make-shifts and inconveniences which have existed here ever since the new Poor-law rendered more perfect classification necessary, deprecates any false notion of economy inducing the guardians to rebuild on the old site, the limited extent of which renders it unfit for the purpose. An extra outlay of four or five thousand pounds ought not to be a consideration in a case like this, particularly as it would be divided over the whole union, and the repayment extended over twenty or thirty years.

Lincoln.—Several finished portions of the new east window have been temporarily introduced, for the purpose of ascertaining the probable effect of the whole. By some it is thought a little more depth of colouring would have been more in character with other windows in the edifice. The new window will be completed early in the spring. It is said to be the intention of the Dean and Chapter to clear away the entire mass of plaster which now conceals the stone work of the roof of the choir, extending from the east window to the broad tower.

Norwich.—On Friday before last the Library and Museum Committee opened the tenders for the erection of the proposed free library. The tenders were, Mr. Balls, 3,540*l.*; Mr. Murry, 3,349*l.*; Mr. Steward, 3,310*l.*; Mr. Lacey, 3,300*l.*; Mr. Sexton, 3,289*l.*; Mr. Worman, 3,098*l.* The last, being the lowest, was accepted, and the building will be erected in accordance with Mr. Benest's plan. The front elevation will be somewhat more ornamented than was at first contemplated. The building is to consist of two stories, the whole length, from the Museum to Duke's Palace-street, being about 70 feet, and the whole width 33 feet. The entire length and width of the first story would be small enough for a free public library, but according to present arrangements there are to be several partitions, making one room for the museum and another for a reading-room,—about 10 feet being allowed for the corner entrance. The upper story is divided into several rooms; two for the Literary Institution, one for the People's Library, 33 feet by 14½ feet. Several partitions make smaller apartments on this floor. According to the plan, the rooms will be lighted by windows at the front and back.

St.-Martin's-at-Oak.—The partial restoration of the parish church has been completed. The chancel has been covered by a new roof; a new window has been put in at the east end; and the walls have been repaired throughout. About 150*l.* of the expense have been realised.



Burbage.—The church here having been rebuilt under the plan of Mr. Wyatt, carried out by Mr. Major, of Swindon, builder, was reopened on 7th inst. The inhabitants, vicar, and churchwardens, treated the workmen to a good substantial supper. The church is in the Gothic style.

Falmouth.—It has been determined by Government to carry out a series of fortifications at the harbour here on an extensive scale. A contract has just been entered into by the Board of Ordnance with Messrs. Olver and Sons, involving an outlay of many thousands, to erect a range of fortifications at St. Maw's and Pendennis Castle, and the contractors, who are bound to complete the whole in six months from the date of the contract, have at once commenced drawing materials for the commencement of the undertaking. The same firm have contracted with the Admiralty to make a number of important alterations and additions to the Government dockyard at Mylor.

Lamorran.—The parish church of Lamorran, Cornwall, erected some fifteen years back, is being remodelled in the Middle Pointed style, the present edifice being, as we are told, of the basest churchwarden Gothic. The whole will be new roofed, and have new traceried windows, new gables and crosses, a new north transept, and a new vestry. The whole body of the church will be reseated with open benches. Mr. White is the architect, and the works are to be done at the joint expense of Lady Falmouth and the Hon. and Rev. Townshend Boscawen, the vicar.

Glossop.—A new steeple, of considerable altitude, and capable of containing eight bells, is about to be erected in connection with the parish church of Glossop. The decapitation of the old spire took place a few days ago. The bells were safely lowered to the ground by means of pulleys. Upon the tenor bell are inscriptions, bearing the names of Christopher Howe, vicar, and John Knott and Samuel Bray, churchwardens. The old building, now partially removed, bore marks, it is said, of the remotest antiquity, and evident signs of decay. The proposed new structure will be reared at the cost of the Duke of Norfolk, by whom, also, the foundation-stone is shortly expected to be laid.

Hulme.—On Saturday week the Bishop of Manchester laid the foundation stone of the new church of St. Paul, in St. George's district, Stretford New-road, Hulme. The committee have succeeded, by a canvas throughout the district, in obtaining about 2,500*l.* of subscriptions to defray the cost of the building, &c. a large portion subscribed by the humbler classes, in subscriptions of 2s. 6d. to 10s. The cost of the land was from 900*l.* to 1,000*l.* The church is expected to cost rather more than 2,000*l.* so that the committee still require for the church alone (independent of schools hereafter to be built) about 500*l.* and 1,000*l.* as an endowment fund. The architect of the church is Mr. R. M. Smith, and the builders are Messrs. Mellor, Son, and Terras, of Manchester. The church will be 95 feet long by 48 feet wide, outside measure, and is intended to hold 1,100 people, including 200 children. Being enclosed by buildings, there will be no lights in the side walls; but a clerestory will be formed in the roof, which, in connection with three large windows in the front, will, it is expected, afford abundance of light. The front will have a deeply recessed porch and large six-light windows, with tracery in the head, surmounted by an arch supporting a tower and spire, and pinnacles ornamented with crockets. The spire, including the nave, will be nearly 100 feet high. The style of architecture chosen is the Decorated of the time of Edward III.

MANLEY'S PATENT FOR CONSUMPTION OF SMOKE.

THE CONSUMPTION OF SMOKE.

THE annexed diagram is an illustration of the arrangement for the consumption of smoke described last week (p. 479), and now in operation at Messrs. Cubitt's, in Gray's-inn-lane. It will be seen, as there stated, that the old flue was cut off, and a new flue formed, descending into a drain, deepened to hold water as a tank. At the top of the descending limb a jet of water is introduced through a rose, the effect of which is to produce a current which carries the smoke into the receptacle below, where it condenses and floats in globules on the surface of the water. The superfluous water passes off in a clear state, and the gases which accompany the smoke are either drawn back by a pipe into the furnace, or go off by the sewer.

In this case it will be seen the smoke is not merely lessened, but done away with altogether, with this further admirable result, that an *enormous* saving is effected in the combustion of coal. We have before us a statement from the fire-man, showing for three weeks that while the average daily consumption of the furnace on the old principle was *eleven* bushels a day, the furnace on the new principle burns but *four* bushels!

Setting aside mechanical contrivances for feeding fires, as being applicable to few cases, and very costly in their application, the majority of the patent schemes now before the public are merely arrangements for effecting this admixture of air with the gases evolved from the heated fuel. Various elaborate schemes have been propounded for regulating the quantity and temperature of the air, according to the state of the fire. Messrs. Sylvester have invented an arrangement, consisting of an iron bridge or false back to the furnace, having fins cast on it at the back, the spaces between which form, as it were, so many channels communicating between the ash-pit and the throat of the flue, and deliver a constant current of air at the back of the bridge. The intention is, that the air being heated by contact with the fins, should enter into combination with the gases evolved from the fuel in the furnace, at the temperature necessary to their perfect combustion, and destroy the smoke, the heat so generated increasing the draught of the shaft.

THE CHAPEL AT WAKEFIELD BRIDGE.

SEVERAL letters have reached us in reply to the query (p. 450, *ante*) as to the date affixed to the chapel on Wakefield-bridge, in the "Handbook for the Mediæval Court," at Sydenham; the majority confirming the objector in his opinion that it should be ascribed to the reign of Edward III. They refer to the fact, that by the charter of 31 Edward III. dated at Wakefield, 10*l.* per annum were settled on William Kaye and William Bull, and their successors for ever, to perform divine service in a chapel of St. Mary, newly built on the bridge at Wakefield.

The question is argued rather fully in an "Essay on the Chapel," by Norrison Scatcherd, esq. published in 1843,* conclusively, too, as it seems to us, in favour of the belief that the chapel should be ascribed to the reign of Edward III.

A correspondent says,—"Perhaps all your readers are not aware that this interesting structure, after having been used as an office, a lumber-room, and for similar ignoble purposes, was restored a few years ago (by a gentleman named Cox, if I remember rightly), and is now appropriated to its original purpose."

* Simpkin and Marshall, London.

WANT OF WATER AT CAMDEN-TOWN.

I HAVE often admired your steady advocacy of the claims of the great unwashed to better air and more light and water, little thinking how soon I and my neighbours might need your help. But that time has arrived, and I impeach the guilty parties at the bar of the *Builder*. We are inhabitants of Camden-town, rented at from 60*l.* to 100*l.* per annum, and the water-rates are from 3*l.* 10s. to 5*l.* 10s. Our days of receiving water are Monday, Wednesday, and Friday only; and then so scanty is the supply that it is but one day's consumption; and as the water-closets all through the Camden-road-villas require 15 feet to 20 feet high service—for which we are charged heavily—there is not one house in ten which is not entirely wanting in the necessary supply on Tuesday, Thursday, and the whole of Saturday and Sunday. I believe the Camden-town district is served [out] from the Hampstead Waterworks, which rent a 9-inch main from the New River Company, the latter body collecting the rate, and charging this ill-served district *more* than where there is a daily supply direct from the New River. All this has been represented to the district authorities, but, like Gallio, they "care for none of these things."

Will you take up our complaint, and pierce the ears of the Board of Health, or kindly tell us how to perform the operation ourselves? I am afraid, however, anything less trenchant than the spear of the *Builder* will fail to penetrate the many-folded shield of these Bœotians.

Is it from a feeling of impartiality that they do this? Camden-town is supposed to be a healthy neighbourhood, and they might wish to give all *a fair chance* of the cholera.

Help us, dear sir, and we shall not only think of you on Saturdays, when we read your paper, but every Tuesday, Thursday, and Sunday your praises shall be heard in the villas: parlour and kitchen will unite in a pæan to your glory. R. R.

THE BUILDERS' BENEVOLENT INSTITUTION.

A MEETING of the governors and subscribers to this valuable charity, founded in 1847, for granting pensions and giving relief to aged and decayed members of the building profession and their widows, was held a few days ago. Mr. George Bird, the treasurer, presided.

The report stated that during the past year there had been eight persons placed upon the funds, making the total number twenty-four—viz. fourteen males and ten females. The sum paid for pensions since the commencement of the institution amounts to 1,394*l.*; the subscriptions and donations received during the past year amounted to 1,206*l.* 18s. The stock now amounts to 4,350*l.* divided as follows, viz.—3,050*l.* stock to the relief fund, and 1,300*l.* to the building fund. Owing to the large number of unsuccessful candidates at the last election, the directors have determined to have another election in November next. W. Lee, Esq. M.P. for Maidstone, has accepted the presidentship, for the year ensuing, and has kindly consented to preside at the seventh anniversary dinner, which is fixed to take place at the London Tavern on the 26th of October next.

We would urge the claims of this institution on the attention of all who are connected with building, as we have uniformly and perseveringly done from the first day of its establishment.

MR. DARGAN AND THE IRISH EXHIBITION BUILDING.—It appears from a publication by Mr. Sproule on the subject, that Mr. Dargan's actual loss has been within a few pounds of 19,000*l.*

Notices of Books.

Tours in Ulster: a Hand-book to the Antiquities and Scenery of the North of Ireland. By J. B. DOYLE. Dublin: Hodges and Smith, Grafton-street. 1854.

THE title of this little work speaks for itself. Ulster is an interesting province, many districts and nooks of which are still comparatively unknown to the tourist, although every one is familiar with its more prominent objects of interest, topographical, archæological, or industrial. In the last respect it stands pre-eminent in Ireland. In the two former the written sketches by Mr. Doyle, illustrated as they are from his own sketch-book, will show that it is also distinguished in a country celebrated both for its scenery and its antiquities. Brief descriptions are given of castles innumerable, of towers and cairns, and many other archæological curiosities, interspersed with not a little matter of additional interest in regard to the habits and customs, superstitions and traditions of the inhabitants of the province, as well as their past history and their present pursuits, their eminent men, and their chief towns, villages, and mansions; the whole being within very moderate compass, and forming a suitable hand-book for the tourist, as well as a graphic narrative for home perusal.

Collectanea Antiqua. By Mr. C. ROACH SMITH, F.S.A. Vol. III.

THE recent death of Mr. Crofton Croker has given additional interest to some notes by him on various discoveries of Gold Plates, chiefly in the south of Ireland, just now published in Mr. Roach Smith's valuable "*Collectanea Antiqua.*" These gold plates have perplexed antiquaries for some time, and will still perplex them, as Mr. Croker does not pretend to arrive at any definite conclusion as to their use. The notes show that gold was at one time, at all events, very plentiful in Ireland. We will take the opportunity to express our great regret for the loss of Mr. Croker, with whom we were long on intimate terms. He had a store of curious knowledge, which came out in a quiet chat more copiously than in society.

In the same volume Mr. C. R. Smith has printed some strictures on the management of the Society of Antiquaries.

[Notices of several books are necessarily postponed.]

Miscellanea.

TIME FOR SHARPENING TOOLS.—In the Brompton County Court lately a case was decided in which Humphrey, a joiner, sued Messrs. Grey and Ormson, of Chelsea, the horticultural builders, for 1s. 4d. as a quarter of a day's wages, due according to custom while sharpening his tools previous to being discharged for irregularity in attendance in the morning. The plaintiff maintained it to be the custom, not only in the trade generally, but also in Messrs. Grey and Ormson's, for such an allowance to be made on the case of discharge, unless the workman had discharged himself from the employment. He appeared to have brought witnesses with him to that effect, but these, having remained in court during the hearing, were objected to, and were not allowed to give evidence. The defendants urged that it was only when their workmen were engaged in country jobs that they made such allowance, as while on their own premises they were of the custom of sharpening their tools at all times when they became blunted; and that plaintiff was not engaged on a country job when discharged. The Judge (Adolphus) said he had no evidence to support the plaintiff's demand, and decided accordingly in favour of the defendants, with costs.

IMPORTANT TO PORTRAIT PAINTERS.—Mr. Salter, a portrait painter, has just obtained a verdict of forty-five guineas against Major-General Sir Wm. R. Clayton. Mr. Salter had contracted with the defendant to paint his portrait, in military costume, for a sum named. The defendant sat only once, though repeatedly requested, in the course of two years, by Mr. Salter, to sit again, that the portrait might be finished. The defendant not attending to these invitations, Mr. Salter obtained a major-general's uniform, and completed the picture and sent it home. Defendant caused the portrait to be conveyed back and placed in the area of Mr. Salter's house. An action was accordingly commenced in Marylebone County Court, and the result was a verdict in full for the plaintiff.

ST. MARY'S NEW EPISCOPAL CHURCH, ARBROATH. This new edifice, which stands on high ground east of Arbroath, and was consecrated on 31st ult. was designed by Mr. Henderson, of Edinburgh, architect. It is in the Middle Pointed style of Gothic architecture, and consists of nave and chancel, with north aisle continued partly over the chancel, high-pitched roofs, and a spire at the north-east end of the aisle, 20 feet square at base, and 130 feet high. The spire rises square for 60 feet of 17½ feet diameter, and terminates in an obelisk of 70 feet. Long broaches bring up the square to the octagon, so as to obviate abruptness in the junction; and the spire is ornamented with spirelets and canopied niches. The belfry story under the obelisk is ornamented with large two-light windows on each side, filled with tracery. The north and south windows are all of three compartments of varied tracery. The east and west windows are of large dimensions, the former having five and the latter four compartments, with tracery. Buttresses flank the sides and corners of the building. The corners and dressings are of the Fife and Dunmore quarries; and the rubble work, which is chisel-jointed and dressed, is of the Border quarry. The principal doorway enters through the tower. The interior of the nave measures 76½ feet by 28 feet; and the aisles together, 78 feet by 16 feet. The chancel is 28 feet by 18½ feet. The chancel is finished over with an arched ceiling, coloured in blue and gold, with ribs in varied colours. The east window is filled with stained glass by Wailes, representing the Ascension in large figures, with five smaller panels representing the five principal scenes between the Resurrection and the Ascension. The seat-benches, which are large, are of deal with moulded ends, fitted with doors, and varnished with a dark staining. The floor is at present seated for 520, leaving an open space at the west end, where the font, which is of stone, is placed. The organ, with stalls for the choristers, occupies the chancel-aisle, which is divided from the main aisle by two high-pointed arches. The whole of the arching, jambs, and pillars of the interior, is of polished stone of a light shade. The roofs of nave and aisle, both high pitched, are of plain heavy couples with open timbers, and finished in dark staining. Between the sarking and the slates there is a lining of felt all over the roof. The parsonage, which is of corresponding style, is placed at the south-west angle of the ground, retiring behind the church.

GLASS-MAKERS' SOCIETY.—A meeting of the members and friends of the Flint-Glass Makers' Society assembled at Birmingham, in the Odd Fellows'-hall, on Friday in last week, to commemorate the banking of a second 1,000*l.* as also to present a testimonial to Mr. Gillender, the central secretary of the society, upon the occasion of his leaving the country for America. About 200 persons partook of tea, after which Mr. W. Scholefield, M.P. took the chair, and delivered a suitable address, as also Mr. Gillender, to whom a watch and 50 sovereigns were presented.

SURREY GAS CONSUMERS' ASSOCIATION.—The first half-yearly meeting of this company since the passing of the Act of Incorporation was held last week. The report of the directors stated that the rental for the half-year ending the 30th June, under a new arrangement with Mr. Croll, the engineer, and from the payment of interest by him on the capital expended on the extension of the works, was 5,052*l.* 9s. 8d.; which sum left, after payment of all fixed charges, a balance of 3,768*l.* 8s. 3d. available for dividend up to Midsummer last; out of which a dividend at the rate of 8 per cent. per annum, free of income-tax, was voted, leaving a balance of 1,159*l.* 6s. 9d. to be carried to the next account. It was added, that the directors had entered into an agreement with the Deptford Gas Company to purchase the whole of their undertaking, at a price to be fixed by arbitration. The report was adopted.

VICTORIAL STATUE AT GLASGOW.—The inauguration of Baron Marochetti's bronze equestrian statue of her Majesty took place on 8th inst. at Glasgow, in presence of a large proportion of the most influential citizens, and of an immense crowd of spectators of all classes. The lord provost, magistrates, and town council gave a grand dinner to Baron Marochetti, the committee who undertook the erection of the statue, and the subscribers, in honour of its successful completion and inauguration in St. Vincent-place. The entertainment took place in the old town-hall, at the Cross, where covers were laid for 150 guests. The lord provost occupied the chair.

BEWARE OF THE LAMP-POSTS.—Allow me to call attention to the defective management of lamp-posts and other posts during the process of repainting. I have several times seen persons who thoughtlessly have passed in too close proximity to the posts, and have thereby seriously damaged a good coat or dress. An encasement of wire or wicker-work would prove an effectual remedy for this evil.—W. L.

NUISANCE NEAR THE ADELPHI.—A deputation from the inhabitants of St. Martin's-in-the-fields had an interview lately with Sir Benjamin Hall, as president of the General Board of Health, at the offices, Whitehall, to solicit his influence in adopting measures for the abatement of a nuisance on the borders of the Thames, near the Adelphi, caused by the depositing of a great quantity of decomposed matter in a barge moored off that place by Mr. Gore, the City contractor. Sir B. Hall promised to look carefully into the case, and lay a statement of the facts before the law officers of the Crown for their opinion.

FIRE IN GLOUCESTER CATHEDRAL.—On Friday in last week Gloucester was thrown into a state of alarm by an outbreak of fire in the cathedral, commencing with the bishop's throne and the seat in front of it. It was fortunately soon extinguished, but not before some damage had been done. It is attributed to workmen engaged in cleaning the choir. This is the second time within four or five years that this beautiful building has been in danger of destruction.

THE MANCHESTER SCHOOL OF ART.—A *soirée* was held on Thursday evening in last week, in the Royal Institution, at Manchester, on the occasion of the exhibition of a collection of drawings, paintings, and models executed by students of the different classes of art throughout the country, to which prizes have been awarded by the Board of Trade, during the recent exhibition at Gore House, and also a collection of similar works produced in the Manchester school, to which the Board has likewise awarded prizes. There was a very numerous company. Mr. Thomas Bazley presided; and in his address enlarged somewhat too much, we think, on the "great alarm" excited by the diminution of the pecuniary aid heretofore afforded by Government to the Manchester school. Think of the "great alarm" and "serious apprehension" of the Manchester magnates on such a subject! The Rev. C. Richson, with somewhat better reason, complained of the very limited support which the wealthy inhabitants of Manchester gave to this institution. He contended that the people of Manchester, as a body, did not give it that support to which it was entitled. He knew of no institution calculated to effect more advantage than this, and yet how much coldness and indifference there was on the part of many of the wealthy inhabitants of this district, who, when asked to contribute to the promotion of art-education in this society, complained of Government not dealing just measures to them! The mayor of Manchester, the Rev. Dr. Vaughan, Mr. W. Fairbairn, Mr. J. C. Hammersley, and other gentlemen, also addressed the meeting.

THE LIVERPOOL ACADEMY EXHIBITION.—The opening exhibition at Liverpool is described by the local *Journal* as the best that has been seen there for a long while. Many of the pictures have already been seen in the metropolis, but are not the less new to most of the busy citizens. There is also an unusual quantity of sculpture. The intended meeting of the British Association at Liverpool has doubtless assisted in rendering the exhibition more attractive than it would otherwise have been, and it will itself be a source of attraction to the members of that association.

FINSBURY PARK.—With reference to the suggestions in a late number for making *two squares* to the north of Islington for the recreation of the inhabitants of Finsbury, after Lord John Russell had admitted that less than 400 acres would be almost useless as a park for such a borough, is "B." aware that Islington alone contains upwards of 100,000 inhabitants? and that since this park was suggested, *several squares* have been formed and completed in the northern part of Islington, and yet from 5,000 to 7,000 persons are still to be seen of a fine Sunday enjoying the beautiful grass plots of Highbury-barn Tavern, there being no park or open fields to which they can have access without committing a trespass, and are therefore compelled to pay through refreshments for the enjoyment of these grounds? Of what use, then, would a couple of squares be to the thousands that seek in vain for green fields and pure air in this locality after six days of incessant toil? Equally in error is "B." when he says, "We shall never induce the Government to advance the large sum required for a park." Already the Government have agreed to advance 50,000*l.* and there is little doubt but that the remainder will be forthcoming when the promised *Municipal Reform Bill* shall have passed the Legislature; and we shall then find it as easy to pay a penny in the pound *for once* to assist in forming a noble park as we now find it to pay sixpence in the pound for three almost consecutive years towards the formation of sewers, from which we have hitherto derived no benefit whatever.—L.

MR. GEARY, ARCHITECT.—We have to record the recent death of Mr. Stephen Geary, architect. The plans and designs which accompanied the published proposal to convert the Globe in Leicester-square into a public institution, bore his name.

ASSOCIATIONS WITH PIMLICO.—With reference to the destruction of houses around Buckingham-palace which is now going on under the Pimlico Improvement Act, the *Monthly Literary Advertiser*, a local journal established in Pimlico, says—"The work of destruction has commenced in James-street, and six houses are now in process of speedy disappearance. James-street has some specific memories and chronicles. At No. 6 (the last of the houses now in course of demolishment) lived William Giffard, the 'terrible Angel' of the *Quarterly Review*, and 'the sour little gentleman' of Leigh Hunt's satire; and here he expired in 1826, and was buried (by virtue of his literary slaughterings in the cause of Toryism) in Westminster Abbey. At No. 2 lived Mr. Pye, the poet-laureate of the Regency. At No. 3, James Chalmers, the author of 'Caledonia,' resided. Glover, the author of the husky blank verse poem 'Leonidas,' and Edmund Lodge, compiler of the 'Illustrations of British History,' were also residents in this street; and here Heber had a house for a portion of his noble library, the several rooms throughout being crammed with books from kitchen to back attic, while three other portions of the same collection were disposed of elsewhere. In Stafford-row Mrs. Radcliffe died in the year 1823. According to Mr. Cunningham, Richard Yates, the celebrated actor of old men's parts, died in Stafford-row, in the year 1796. Yates had ordered eels for dinner and died the same day of rage and disappointment because his housekeeper was unable to obtain them. Charlotte-street may be noted for the chapel near the south-west end. It was built by the unfortunate criminal Dr. Dodd, and was subsequently held by Dr. Dillon. It seems strange to think that Milton resided in York-street, Westminster (then called Petty France), for eight years, from 1652 to 1660: the place must have presented a very different appearance then, for the poet's house is described as handsome, and as being next door to the mansion of Lord Scudamore. Here he wrote his noble 'Defence of the People of England.' The edifice looked out backwards into St. James's-park, and has been inhabited in the present century by Jeremy Bentham and William Hazlitt. The house (which is numbered nineteen) is anything but "handsome" now.

THE PROPOSED MONUMENT TO DR. JENNER.—The Prince Consort has given 25*l.* towards the subscription for a colossal bronze statue, to be erected in the metropolis, to commemorate the victory over that once deadly foe the small-pox. The model of the statue has been designed by W. Calder Marshall, R.A. Would that some new Jenner could as fully conquer the cholera. Surely he would not be so long as, to our disgrace, Dr. Jenner's memory has been in receiving due honour for the grand discovery. We have sometimes thought that that other dread enemy to human life, hereditary consumption, might be eradicated by inoculation of those predisposed, with the virus from diseased glands or lungs.

GLASGOW ARCHITECTURAL EXHIBITION.—At a recent meeting of the Glasgow Town Council, a deputation appeared from the Council of the Architectural Exhibition to be held there, and stated, through Mr. Salmon, that they had made arrangements to meet all the expenses, with the exception of the transmission of works of art they expected to receive from abroad, and other minor expenses, towards the liquidation of which they solicited a grant from the council. The application was remitted to the Finance Committee for their favourable consideration, to report to the council.

ARTESIAN MODE OF BORING FOR LEAD ORE.—I shall feel extremely obliged by any of your correspondents favouring me with their sentiments on the practicability and desirableness of boring in the artesian manner for lead ore. It strikes me that it might be effected at much less expense than usual, but I am ignorant whether it has ever been adopted in searching for lead. I have, however, ascertained the opinions of some competent persons favourable to the plan.—CIVIS.

THE GULLY-HOLES.—I see there are many persons complaining of the noxious vapours issuing from the gully-holes. The only wonder is, that these complaints are not more general, for although the Commissioners of Sewers may assure us that they are all duly trapped, yet, through the inefficient manner in which this trapping is arranged, it is entirely useless: they are formed on the principle of the syphon, and consequently depend upon the constant presence of a certain quantity of water now in hot weather (just in the very season of all others when it is most necessary that there should be no open communication between the sewers and the streets): the water being close to the surface, of course speedily evaporates, and *there is no trap at all* until by a fall of rain, or some other means, the syphon becomes replenished. It is very doubtful whether there is at this moment a single gully-hole in this metropolis properly trapped.

J. N.

PULLING DOWN OLD BUILDINGS.—A correspondent, J. C. suggests that to suppress dust, a water-pipe might be fixed horizontally above and in front of the building about to be taken down and perforated with small holes, so that a continual shower or curtain of water might descend, so as to confine the dust within the limits of the building. A tarpauling might, he adds, be hung outside the falling water, to prevent the effect of wind, &c. A trough or water-course placed underneath would form a channel to an adjacent gutter.

METROPOLITAN IMPROVEMENTS.—A "Londoner" suggests the widening of Gray's-inn-lane at the south end, just where there has lately been a fire, by merely pulling down one house;—the making a street through Whetstone-park into Great Queen-street;—the taking down the baker's shop (now nearly tumbling down), at the corner of the street going from Hemmings-row into Leicester-square—an immense thoroughfare;—and, lastly, the demolition of the chemist's shop at the south-east corner of Leicester-square. These, as he adds, are improvements of great moment, and of small amount of cost.

THE STANLEY WINDOW IN NORWICH CATHEDRAL.—The painted window recently placed in the nave of this cathedral, in memory of the late Bishop Stanley, was designed and executed by Mr. George Hedgeland, of London. The general idea conveyed by the painting is that of a screen of Gothic work, placed immediately behind the stone framework of the window, with whose principal divisions it generally corresponds in design; being pierced with six open arches, through or under which the more important subjects are represented as seen, and terminating in three spires of tabernacle work, shooting up high into the tracery of the window. These subjects were adapted from certain well know pictures, the three upper ones being the adoration of the Magi,—the Ascension,—both after Raffaelle,—and the blessing of children by Christ,—after West; the lower ones, the finding of Moses,—the Brazen Serpent,—and the Presentation of the Law,—the first and last after Raffaelle, and the second after Le Brun. In the tabernacle work of the two outer spires are introduced figures of Patriarchs,—and in that of the central spire figures of Prophets and Evangelists. Above are angels flying in the firmament, which serves as a ground to the spires of the screen.

SELF-EDUCATION OF ARTIZANS.—A Birmingham correspondent, Mr. R. M. Bancroft, of the Oxford Works, Oldbury, suggests, that in order to enable British mechanics to maintain the superiority which their enterprising transatlantic brethren are straining every nerve to surpass, means should be taken to induce them to acquire a theoretical no less than a practical knowledge of their arts; and that to this end one great help would be the placing of the published works of our chief engineers and architects, &c. within reach of every artizan, an object which might, he thinks, be accomplished by the formation of a society towards which could be enlisted the aid of the principels of our large mechanical and architectural establishments, who have no less interest than the craftsmen themselves, in enabling the latter to excel those of all other nations, and who assuredly would not withhold their aid towards so desirable an end. By help of such a society, our correspondent, thinks that artizans subscribing would acquire by degrees a number of good standard works in their own small libraries, purchased retail at a moderate rate from or through the society.

THE NEW "TOWN" AT HERTFORD.—A correspondent lately hinted, that a human dwelling without separate convenience for cleanliness, could not properly be regarded as a "house." Neither, we think, can a collection of houses, without a single drain, except in the drainage of cesspools into adjoining wells (!) be properly called a town. Nevertheless, there is such a "town" in course of formation in the suburbs of Hertford, according to the local *Mercury*, which states that many houses are in course of formation on the Ware road, on land purchased and resold by the National Freehold Land Society, who are disposing of the allotments, and authorising the erection of a complete new town, if it can be called so, without even a single drain laid down even for slops or waste water, and with cesspools dug in every instance close to the wells! Such bestiality is not only disgraceful but criminal, and every house so built ought to be pulled down as a nuisance, and the whole razed, like so many pigsties, unfit for association with human dwellings. It is lamentable to think that, notwithstanding the reiterated efforts of the press, and of those who write for it, to penetrate thick skulls with some slight sense of sanitary necessity, and notwithstanding the efforts of intelligent builders, architects, and speculators to introduce a better order of house arrangements, it should now be possible that any one should even dream of still carrying out new plans on such disgusting want of sanitary principles and even of common sense.

[ADVERTISEMENT.]

DARING ATTEMPT TO BLOW OPEN A CHUBB'S SAFE WITH GUNPOWDER.—Messrs. CHUBB and SON respectfully submit to their friends and the public the following letter:—

"Irk Mills, Millgate, Manchester,
September 1st, 1854.

Gentlemen,—On Wednesday night last, my counting-house, situate as above, was broken into by burglars, who, after having forced open all the drawers therein, made an attempt with gunpowder to blow open the Large Safe, which I purchased from you about three years ago, but to no purpose; the lock of the safe door, although much strained, was opened by its key without much difficulty on the following morning. From the inside appearance of the Safe, it is evident that a very heavy charge of gunpowder must have been applied, as several pieces of woollen cloth therein were burnt and otherwise discoloured. You are at liberty to refer to me for confirmation of the above statement, if required.

"I am, Gentlemen, yours respectfully,
"JOHN BLAIR.

"Messrs. Chubb and Son, 16, Market-street, Manchester."

On March 1st, one of CHUBB'S SAFES preserved Messrs. Rylands and Son's Books and Cash in the great fire near High-street, after exposure to the flames for fourteen hours; and on May 15th, another of CHUBB'S SAFES saved the Books and Notes at the fire, Store-street Mills.

CHUBB and SON, Lock and Fire-proof Safe Makers, 57, St. Paul's-churchyard.

TENDERS

For Barming Schools, Kent. Mr. Joseph Clarke, architect.

TO CORRESPONDENTS.

Cost of Brickmaking.—We have received a number of letters on this subject, and have one in type, but are forced to postpone it.

"W. H." "An Auld Wright," "Architect," Salop (not unless specially asked for. The use of catacombs is very undesirable) "C. J. R." (we are anxious not to increase the alarm), "A Subscriber," "H. D. A." "H. D. F." "Inhabitant of St. James's," "W. W." "W. H." "S R." (out of our power to advise on private matters), "S. B. L." "W. W. H." "F. S. A." "Cornwall" (cannot reply without seeing the drawings), "W. E. E."

"Books and Addresses."—We have not time to point out books to find addresses.

ADVERTISEMENTS.

TO ENGINEERS AND SUPERINTENDENTS OF RAILWAY WORKS.

WANTED, a few qualified ENGINEERS and ASSISTANTS, at once to take charge of the construction of a railway about 7 miles in length, with 7 bridges and tenements, to be addressed, stating A. Y. Z. to J. S. and Co.

NOTICE TO MASONS.

WANTED, Some good HANDS at general work. Competent Masons can obtain constant employ.—Apply to Mr JOHN SUTTON, Rocky hill, Maidstone, Kent.

WORKING FOREMAN WANTED, in Town, to superintend the repairs of houses. He must be competent to estimate the cost, capable of taking measurements accurately, and willing to make himself generally useful. Applicants must state the age, where last employed, and amount of wages expected.—Address letter to A. B. care of Dibben and Co 83, St John street-road, London.

WANTED, by a Contractor, an active steady MAN, one who is thoroughly acquainted with Earthwork and Masonry, and capable of making working drawings, and setting and carrying out the works several miles from the Railway. Respectable references required.—Address, J. FIRJANK, Contractor's Office, Newport, Monmouthshire.

WANTED, a MAN well acquainted with BURNING all descriptions of COKE and of CHALK LIME over Coke Ovens.—Apply to BUILDER, Post-office, Norwich.

TO SURVEYORS' ASSISTANTS, &c.

WANTED, in a first-class Office, an ASSISTANT, who has a practical knowledge of building and of the value of artificers' work, and can also map and print well.—Address, prepaid, in the first instance, stating terms, &c. to H. P. No. 1, Waterloo College, Wellington-road, Camberwell-green.

TO MANAGERS OF WATER-WORKS.

WANTED, a GENERAL MANAGER for a WATER WORKS in a country town. He must understand pipelaying and plumbers' work, have a general knowledge of the steam-engine, and be able to keep the cash-book and accounts. A reference from twenty-five to thirty-five. One who has filled a similar situation will be preferred. Letters (post paid), stating age, previous employment, and salary expected, to include the keeping of a means of conveyance (the works being situated at about the miles from the town, with the means of conveyance under which he has been engaged), and who may be referred to, as to qualifications, to be addressed to Messrs Waterlow and Sons, Stationers and Lithographers, Parliament-street, and to refer to the 20th SUPPLEMENT. It is requested that none but those who are thoroughly competent and not in men of business, and those who are able to provide proper sureties, will apply.

WANTED, immediately, a good THREE-BRANCH HAND. Must be a good Plumber. Wages 6s a day. A first-rate workman will find this worth his notice, and no other need apply. Apply personally, at the Britannia Victoria-road, Kensington, or John-row.

TO SURVEYORS AND ARCHITECTS.

WANTED, a YOUNG MAN to occasionally ASSIST in a SURVEYOR'S OFFICE, as well as to superintend the progress of building operations through it. He must be thoroughly acquainted with measuring builders' work, and competent to make drawings, design, specifications, &c. Testimonials will be required.—Address, by letter only, to A. Z. care of Mr. Witherick, 5, Sise-lane, Bow, Pickett street, Strand

TO BUILDERS, LANDLORDS, &c.

WANTED, a SITUATION, by a Middle-aged Man, capable of undertaking the direction of a builder's business, having been similarly employed several years. He is accustomed to the collection of rents, and the management generally of house and landed property, and is an excellent accountant. First-rate testimonials and references.—Address, A. B. 13, Wilton-terrace, New North road, Islington.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION as FOREMAN, to take the management of a brick or tile manufactory, by a person of thorough practical knowledge of the business of making and burning every description of red or white bricks, pipes, tiles, &c.; also of the clamping department. Wages a fair hand. Reference can be given.—Address, W. W Postoffice, Kingston upon-Thames, Surrey.

TO ARCHITECTS AND BUILDERS.

WANTED, a RE-ENGAGEMENT, as ASSISTANT, or CLERK of the WORKS, by a thoroughly practical man, aged 26, who has been fifteen years in the business. Can prepare plans, specifications, estimates, &c.—Address, J. M 57, Oxford-street, London.

WANTED, by an experienced and practical Man, a Carpenter and Joiner, a RE-ENGAGEMENT as FOREMAN, or to take the charge of any new works, in town or country with a good reference. Direct to T. M. T. 29, Charles-street, Middlesex Hospital.

WANTED, a RE-ENGAGEMENT by a Young Man, aged 28, who is accustomed to measure off works, take out quantities, and is thoroughly conversant with the routine of a builder's office. The advertiser has served four years to the carpentry business, and is a good draughtsman.—Address, D. Y. A. Office of "The Builder."

WANTED, by an active Man, a RE-ENGAGEMENT as SHOP FOREMAN. Has been used to church work. Satisfactory references as to abilities, &c will be given.—Address, R. L. Office of "The Builder."

N B.—No objection to the country

TO BUILDERS AND DECORATORS.

WANTED, by a YOUNG MAN, a SITUATION as Writer, Grainer &c.—Address H. C No. 3, Staunton-street, Caledonian-road, Islington.

WANTED, by the Advertiser, having an evening engagement as book-keeper, EMPLOYMENT from Nine till Four, in an office or counting house. Understands book-keeping, and could make himself generally useful. Salary moderate, as time is required. Good references. Address, G. B. 73, Charles-street, City-road

TO ARCHITECTS.

THE Advertiser is desirous of a RE-ENGAGEMENT as ASSISTANT, in town. Has been in the habit of preparing perspective, fair, working, and detail drawings, &c.—Address, A. B No 9 Elizabeth street South, Pimlico

TO BUILDERS, CONTRACTORS, AND OTHERS

Term, forty-two years; ground-rent, 32l. per annum.—Apply for further particulars at Mr. LAHEE'S only, Offices, 61, New Bond-street, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

Being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs. its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purpose it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

MANUFACTURED BY MARK BOWDEN AND COMPANY.

WORKS, NELSON-STREET, BRISTOL. MR. JAMES GILLON, AGENT: OFFICE, 60, ALDERMANBURY, LONDON.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

DESIGNS FOR CENTRE-PANES, ON OBSCURED OR RICHLY-COLOURED GLASS, MAY BE HAD GRATIS, POST-FREE.

Prices, and every information, forwarded on application to the Works, Bristol; or at the Agent's Offices, London, where a variety of Specimens may be seen.

TO BUILDERS, CABINETMAKERS, or any Trade requiring good large Workshops and Premises.

TO BE SOLD, the LEASE of a 7-roomed HOUSE, in thorough repair, and every convenience, with large roomy workshops, yards, &c.—For particulars, inquire on the premises, between ONE and THREE o'clock, at No. 72, Pratt-street, Camden-town.

LAND TO BE SOLD.—TWENTY-FIVE ACRES of FREEHOLD LAND TO BE SOLD; it is situate about five miles from London, and one mile from a principal railway station, and close to a turnpike-road; lies high, gravelly soil, and well adapted for a cemetery, or for building.—For particulars, apply to Mr. HEATHER, Solicitor, 17, Paternoster-row.

TO ENGINEERS AND OTHERS.

TO BE DISPOSED OF, a compact ENGINEERING ESTABLISHMENT, completely fitted with tools and machinery, requisite for the employment of fifty men, including a very powerful planing-machine, self-acting boring and drilling machines, engine and foot turning-lathes, steam engine of 10-horse power and boiler, four smiths' forges, an assortment of smiths' and engineers' to ls of every description, a valuable assortment of patterns, and every other requisite. The premises are well arranged in a capital situation on the Surrey side, and are held on lease at a very low rent of 80l. per annum. From 3,000l. to 3,000l. will be required; one-third of which sum may remain on mortgage for two years. For further particulars, apply to Messrs. FULLER and HORSEY, Billiter street, City.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish: ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

GENTLEMEN about to build their own Residences are invited to inspect an entirely new description of FACING for BRICK WORK equal to stone in appearance, but cheaper and more durable than it or cement; it renders a house perfectly impervious to the changes of the atmosphere. First-rate residences where it has been applied may be inspected. Direct to O. P. Office of "The Builder."

TO BUILDERS, CONTRACTORS, GUTTA PERCHA MANUFACTURERS, AND WATERPROOFERS

STOKES and CO. Mill-wall, Poplar, Middlesex, having taken the premises lately occupied by E. E. Cassel, respectfully informs builders and others, they are enabled to supply Asphalte and Pitch at the lowest market price, and buyers of Naphtha who require a pure, powerful, and superior spirit, may obtain at the above works a first-rate spirit, suited in strength and quality to every purpose to which it is applied.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford: "Office of Works, Woburn-park, Jan. 10, 1852.

In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker."

N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', bricklayers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges. Every novelty in French and English panelled decoration always on hand; also excellent imitation of fancy woods.

N.B. Patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps, and the goods despatched with promptitude on receipt of a remittance to the amount of the order given.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark, in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting churches, mansions, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-merchants. DRY OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors and Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. in using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are banished to hell and worthless in use, whilst the inferiorities of these imitations in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the Painter to be all essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks).

PATENT LIQUID CEMENT for Fronts of Houses, &c. This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and in effect will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 1½ and 2s. per gallon respectively.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint: is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 16s 6d each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 8s. per gallon, ordinary colours. Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 8s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 70s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innocuous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint below the price of white lead, possesses equal body, and per-fectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent by trade properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the Kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Allington-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 21, King-street, Liverpool.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement; at their Works, situate near Bridgewater and Exeter Railway, and adjoining the Bathall Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are unequalled as to evenness of heat or cold. The material used is such as will produce a certain and nourishing nutritious power, and a consequent regularity, the want of which is so notorious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to the purchaser and exporter.

St. Mary-street, Bridgewater, July 20th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Parliament, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no Learning. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Steel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly exceeds them in its cementitious properties, that it is unaffected by frost, and does not evolve muriatic gas during its setting. An out of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (recd at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf walls, docks &c and for concrete foundations, is a sufficient recommendation for the recapitulation of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 76, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground render it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The saturation constantly expressed by Engineers, Architects, and Contractors, of the above, is the best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS, STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No 1, Pratt-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experience and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s 6d. Prepared only by W. J. STENT, Warminster. London Agents Messrs. J. and G. WALLIS, 64, Long-acre. Agent for Ireland—Mr S. BOYD, 46, Mary-street, Dublin.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD, WHARF, River Dee, or forwarded by the Chester and Holyhead Railway. Apply to RUGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

MAW'S ENCAUSTIC TILE PAVEMENTS.—A highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance halls, piazzas, verandahs, conservatories, &c.

MAW and CO. Manufacturers of the SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, esq. in "Official Handbook"), send, free of expense, their pattern and price book.

Benthall Works, Broseley, Salop.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 55s per 1,000. Floor Bricks and 6-inch Pavings, at 40s. per 1,000; 8-inch Pavings, at 60s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London or Eastern Counties line.

TO DRAIN-TILE MANUFACTURERS.

WANTED, 1,300,000 1½-inch HORSE-SHOE DRAINING TILES, 12 inches long, to be delivered at the rate of 300,000 per month. First delivery to take place on the 15th of OCTOBER, at any seaport between Portsmouth and Harwich. Cash on delivery. Tenders to specify proposed port of delivery. Pattern of drawing can be obtained on application to Mr COURTENAY, Submarine Telegraph Office, 30, Cornhill, London.

BRICKS.—From Kent-fields.—Grey stock, shipping, paviors, &c. of superior quality; also, white Suffolk, and red facings.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

TO BRICKMAKERS.

WANTED, to PURCHASE, about 500,000 PLACE and STOCK BRICKS, of superior quality, within three miles from the present line, to be delivered on ground situate within three miles of London, in such quantities (not less than 20,000) as may from time to time be required. Persons desirous of Tendering for the above supplies for each description, at per thousand, stating where guaranteed specimens may be seen, are requested to communicate by letter to Mr. HERBERT PRICKETT, Architect and Surveyor, 15, Chancery-lane, and 23, Paddington-green.

TO BRICKMAKERS AND OTHERS.

WANTED, at Mitcham, about two and a half miles from Croydon, from 100,000 to 200,000 GRIZZLE or STOCK BRICKS. For cash on delivery. Tenders to be sent to Messrs. BLAKE and SON, Solicitors, 22, College-hill, Cannon-street, London, on or before the 20th inst.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of very superior quality and colour. Address Mr. WM. WEBB, Brick fields, Stoke Newington.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects, a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO at the Counting-House, Heaton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Red-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

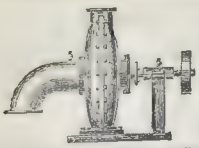
COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Ship pers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr Benjamin Gough), 27, Newington-Crescent, Newington-butts.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 25s. at WARDS OLD-ESTABLISHED HOP BRICKS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods, Fire Bricks, Pantiles, Tiles and Flooring, Patent Malting and Crested ridge perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate. Chief Office, 27, Regent-street.



TO BUILDERS, CONTRACTORS, AND OTHERS.

THE LONDON PATENT BRICK COMPANY are now prepared to enter into contracts for the supply of Bricks made by BARSTABLE'S PATENT. Apply to JOHN A. S. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

BRICKFIELD TO BE LET, capable of producing from three to six millions per annum, in the neighbourhood of a large tract of land, recently laid out for building, within 7 miles of London-bridge.—For particulars, apply, by letter only, to A. B 17, Gresham-street, City.

BRICKFIELD, now in full work, TO BE LET, within an easy distance of London by water carriage, capable of making nearly three millions of bricks yearly, of first quality. The plant and stock at a valuation.—For particulars apply, by letter, to A. B. 5, Shepperton-place, New North road.

TO BRICKLAYERS.—TO BE LET, by CONTRACT, in town, a large quantity of BRICKWORK, at per rod, labour only. Good references will be required, with security, if necessary.—For particulars, address D, Office of "The Builder."

BUILDERS, Contractors, Engineers, Brewers, Papermakers, Chemists, Brickmakers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids shot or cold raised or forced, will find it really to their interest to use GWYNNE and CO.'S PATENTED PUMPS For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information cheerfully given by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the most possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N B The above can be worked either by hand, horse, or engine power.

Iron Pails 28s. per doz. painted
Ditto ... 35s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made in the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescopic suction, galvanized and ungalvanized. A large stock of all sizes always kept ready to finish off to order according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3 inch single barrel, to 15 inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitechapel-street, Fleet-street, London.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong wagon-wheels, with chimney horse shoes complete. Strong, simple, for immediate use. Several are ready for delivery, from six to ten power to twenty-five horse power and of various adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS, Engineers and Portable Engine Makers, 82, Blackfriars road. These engines have been successfully employed for years.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Deron Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PHILLIPS, 101, POLICEMAN'S BITUMEN PAVEMENT OFFICE, TENANT'S CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

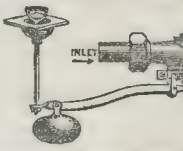
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c to his stock of plumbers' chest linens, plug ditto, brass work, &c &c sheet-lead, and patent pipe, ditto, patent plate, sheet and crown glass, white lead, oils, colours, &c. &c. PER CWT GIVEN for OLD LEAD; GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.



PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the assortion and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depot, 71, Baker-street, Portman-square, London.

GLASS PAPER and GLUE.—Important to CABINET MAKERS.—F. J. DAY'S celebrated extra large Glass Paper, 14s. per ream; Cox's finest Scotch Glue, 67l. per ton, 9½d. per cwt.; finest Imperial Glue, 53l. per ton, 5½d. per cwt.; best London Glue 48l. per ton, 4½d. per cwt. Rosin, German, and Gelatine Glues, in great variety. Wholesale and Retail, 6 and 7, New Inn-yard, Curtain-road, Shoreditch, London.—Country orders executed on receipt, by a post-office order, payable as above.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths &c. Surveys made, and estimates given by FREEMAN ROE Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

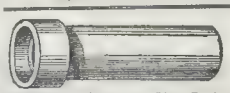
Is adapted for high or low pressure, and for any kind of BASIN Many hundreds are in use under communs per se proof 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured only by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short street, New Cut, Lambeth.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor. 2nd. It is portable, being packed in rolls, and not liable to damage in carriage. 3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 10 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.



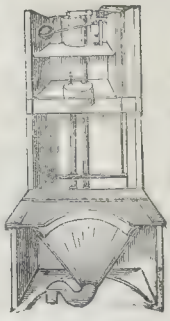
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with short STEPHEN GREEN Patent Ascidant Valve.

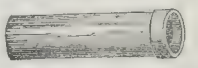
Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1848.

GENTLEMEN, Sixteen of your closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGA, Engineer.



Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN, I have much pleasure in stating my testimony in favor of your patent Syphon Flushing Pans, which I have fixed in three instances. There are several more, where I have recommended their use for upwards of twelve months, to great satisfaction.
I am, Gentlemen,
Your humble Servant,
WILLIAM CARTWRIGHT.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,
MANUFACTURER OF
GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.
65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY,
COMMERCIAL-ROAD EAST.

Waterloo Pan with Syphon-Trap, 7s. 6d. each.

Waterloo Pan with Syphon-Trap connected, price 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2 FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

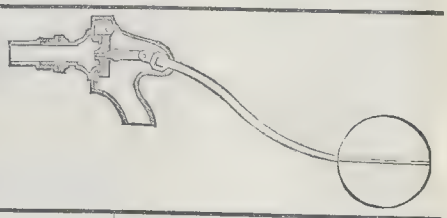
W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

JENNINGS'S DRAIN-PIPES.

TO LOCAL BOARDS OF HEALTH, ARCHITECTS, ENGINEERS, AND ALL INTERESTED IN SANITARY PROGRESS.

JENNINGS'S IMPROVEMENT in DRAIN PIPES, removes all objection s to pipe drainage. These pipes cannot be improperly laid, and, in case of stoppage, they are easily examined, and a action can be made without disturbing the general drainage.



NEARLY THREE THOUSAND FEET OF 15-INCH PIPES ARE NOW BEING MADE FOR THE CRYSTAL PALACE, AND THIRTY-FIVE OTHER PUBLIC WORKS ARE ON HAND.

Jennings's Closets, Valves, Traps, and other Sanitary Inventions, would well repay a visit to his Factory

A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action ll-valve ever offered to the public. They are entirely free from all those objections of fittings such as spin s, slides, and cylinder fittings, so fatal to B.ll valves generally. They are perfectly quiet in action, and not by any means stick fast, there being no point of friction from fittings in their construction. They are arranged as to accumulate the power of closing against the column of water whenmost required, and are rranted to stand any known pressure of water.

	½	¾	1	1½	1½	
Complete with Balls:—Plain shank.....	5s.	6s.	6s. 6d.	7s. 3d.		1 inch.
" " Screw ferrule	6s.	6s. 6d.	7s. 6d.	8s. 3d.		12s. 6d each.
						14s. 6d each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that these are correct prices for inserting in specifications.

STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability are universally admitted, while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Isaac, Bermondsey, Dancer's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kingsland, Camden New Town; BARNER, 9 South Wharf, Pimlico-street, Paddington; COLWILL, Brothers, 32, Bryanston-street, Covent Garden; and at EDWARD WARD'S, 94, Wardour-street, Oxford-street

Drawings and List of Prices will be forwarded free on application.

BUCKLAND and SON, on TUESDAY, the 26th day of SEPTEMBER, 1854 at the ASSEMBLY-ROOM of the Egham Institute, at THREE o'clock precisely, in one lot, the very important and superior PLOT of GARDEN GROUND, eligible for building purposes, either as private dwelling or good shops, having a south aspect, and in the centre of the town of Egham, being the property of the Rev. the railway station about to be erected there, possessing valuable building frontages, about 70 feet in depth, well walled in. Further particulars and conditions of sale may be had of Messrs. HARVEY and SON, Solicitors, Egham; at the Auctioneers' Office, in Windsor; and of Messrs. HASLAM and BUCKLAND, 2, Canon-street West, City.

WASHABLE GILT FRAMES.—J. RIDGWAY, 4a, Tottenham-court-road, opposite Mews's Brewery, wholesale manufacturer of frame mouldings, room borderings, &c. of various patterns, strongly recommended for economy and durability.—The trade supplied.

CRYSTAL PALACE GENERAL ARRANGEMENTS. The Palace is opened on Mondays at 9 a.m. and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m. On these days the charge for admission is One Shilling. It is opened on Saturdays at 1 o'clock, on which day the charge for admission is Five Shillings.

SPECIAL TRAINS will run from London Bridge to the Crystal Palace Station every week-day as follows, at 7'10, 8'10, 9'10, 9'40, 10'10, 10'40, 11'10, 11'40 a.m. and 12'10, 12'40, 1'10, 1'40, 2'10, 2'40, 3'10, 3'40, 4'10, 4'40, 5'10, 5'25, 5'40 p.m.; returning from the Crystal Palace at 11'20 11'50 a.m. and 12'20, 12'50, 1'20, 1'50, 2'20, 2'50, 3'20, 3'50, 4'20, 4'50, 5'20, 5'50, 6'20, 6'50, 7'20, 7'50, 8'20, 8'50, 9'20 p.m.; and further additional trains will run whenever the traffic renders it necessary.

The 7'10, 8'10 and 9'10 a.m. Down Trains, and the 4'50, 5'50, 6'50, and 8'50 p.m. Up Trains call at New Cross and Forest-hill. The Citizen and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London-bridge, at least seven minutes during the day, and at those hours, when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at these piers.

The following are the fares to the Crystal Palace and back, including admission to the Palace:—

Shilling Days	First Class.	3s. 6d.
"	Second Class.	2s. 0d.
"	Third Class.	1s. 6d.
Saturdays	First Class.	7s. 0d.
"	Second Class.	4s. 6d.
"	Third Class.	3s. 0d.

In order to afford every facility to the public, and to prevent any delay at London-bridge, arrangements have been made to issue the above tickets previously, at offices in different parts of London. Passengers taking their tickets at these offices will be admitted at the London Station by a separate entrance.

Fares between London-bridge and the Crystal Palace Station not including admission to the Palace:—

Single Tickets	First Class.	2s. 3d.
"	Second Class.	1s. 6d.
"	Third Class.	0s. 9d.
Return Tickets	First Class.	3s. 6d.
"	Second Class.	1s. 6d.
"	Third Class.	1s. 0d.

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 43, Regent-circus, Piccadilly.

Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d. each. These tickets can only be issued upon production of season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of a great continuance of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London-bridge, or at the Crystal Palace Stations; the conductors must therefore provide themselves with the necessary silver.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by rail, 2l. 2s. each; without conveyance by railway, 1l. 2s. (the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

August, 1854.

MONEY on LOAN, at 3l. per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Monies to poor occupiers or traders residing within the City and Liberty of Westminster, that is to say within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and the Precinct of the Savoy. The amount of each loan is not to exceed 20l. and to bear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD S. STEPHENSON, Clerk and Solicitor to the Trustees.

NOTE. The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been made in the course of the last before the first day of the month. They request that no canvass may be made.

MONEY LENT on PERSONAL SECURITY, LEASES, LIFE POLICIES, &c.—Sums from 2l. to 1,000l., to be repaid by one, two or three days' notice, two years, one year, or six months repayable any day in the week, by weekly, month'y, or quarterly instalments; and good bills discounted. Charges moderate, and strict confidence observed.

LONDON and PROVINCIAL LOAN and DISCOUNT COMPANY, Private Office, 69, Gower's-walk, London—open from 9 till 4 o'clock, and on Tuesday evenings from seven till nine. Forms of application and prospectus gratis, on receipt of a stamped envelope.

H. FLEAR, Manager.

SOUTHAMPTON MARSH.—Improvement Act.—5,000l. WANTED.—Notice is hereby given, that the Corporation of Southampton are desirous of borrowing the sum of 5,000l. under the powers of the March Improvement Act, 1854, upon the security of the Rates of the Marsh Estate when collected. Persons wishing to advance the whole or any portion of the sum required are requested to send me written proposals stating the amount of interest required, and the period for which the money will be advanced, on or before the 15th instant.

By order of the Marsh Improvement Committee,

CHARLES E. DEACON, Town Clerk.

Town Clerk's Office, Southampton, September 1, 1854.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The SIXTH of a COURSE of LECTURES, chiefly designed for the benefit of Art-Workmen, will be delivered at the ROOMS of the Museum, on MONDAY, OCTOBER 2nd, 1854, "On Mathematical Curves suitable to Architecture," by F. C. PENROSE, Esq. Architect.

Hour of admission, SEVEN o'clock. The Chair to be taken at EIGHT o'clock.

Cards of invitation will be presented on application at the Museum, on any day excepting Saturday, from Ten to Four.

HENRY CLUTTON, Hon. Sec.

The entrance to the Museum on the above evening, will be from the Archway in Parliament-street, near Richmond terrace.

ARCHITECTURAL ASSOCIATION.—The CONVERSAZIONE and OPENING MEETING of the Session 1854-55 will be held at LYON'S INN HALL, on FRIDAY, OCTOBER 6th. The Chair will be taken at EIGHT o'clock precisely. Gentlemen wishing to present can obtain cards on application, by letter, to

ARTHUR CATES,
T. W. GOODMAN, } Hon. Secs.

Lyon's Inn Hall, Newcastle-street, Strand.

PROFESSOR DONALDSON'S LECTURES on ARCHITECTURE and CONSTRUCTION at University College, will commence on FRIDAY, the 20th of OCTOBER. First year's classes, at Half-past Six o'clock p.m.; second year's classes, at a Quarter past Eight o'clock, p.m. Further particulars may be had at the College

INSTRUCTION in ART.—The AUTUMN SESSION of the NORMAL TRAINING SCHOOL of ART of the Board of Trade Department of Science and Art, will COMMENCE on 16th OCTOBER, 1854.

Art Superintendent—RICHARD REDGRAVE, R.A.

The course of instruction imparts systematically a knowledge of the principles involved in art, so as to adapt it to the useful purposes of life, with the view of training masters for teaching schools of art, and preparing students to enter upon the future practice of the fine arts in manufactures and workshops either as masters, overseers, or skilled workmen. At the same time instruction is afforded to all who may desire to paint or model entirely without reference to any application to any special branch of industry. Special courses are also arranged to train schoolmasters of parochial and other schools to teach elementary drawing as a part of general education concurrently with writing.

For prospectuses, terms of admission, &c. apply at the Offices, Marlborough House, Pall-mall, London.

CHEMICAL SCHOOL.—The CHEMICAL SCHOOL of the ROYAL PANOPTICON, Leicester square, will RE-OPEN, under the superintendence of Mr. G. F. Ansell, on the 2nd of OCTOBER next. The arrangements are made with a view to give every facility for the prosecution of studies and investigations, and to combine the assistance of tests to those who can command only a portion of their time.—For further particulars and terms apply at the Office of the Institution, between the hours of TEN and FIVE.

CONTRACTS.

CONTRACT for VALVES & FIRE-PLUGS. The Local Board of Health for the borough of Preston are desirous of receiving PROPOSALS from parties for a supply of SLOP VALVES for water pipes of the following sizes, viz.—Inches—3, 3, 4, 5, 6, 7, 8, 9, 10, 12, 26; also for a supply of FIRE-PLUGS for the same pipes. Tenders to include the price for both single and double-faced valves, and for fire-plugs of two or three inches bore. Proposals to be sent in to be delivered at Preston Waterworks Office, 11th Sept. 1854.

Further information required may be obtained on application to me JEREMY WHITE, Engineer to the Board.

Preston Waterworks Office, 11th Sept. 1854.

TO MASONS, CONTRACTORS, AND OTHERS.

PERSONS desirous of CONTRACTING for the EXECUTION of WORKS required in the ERECTION of a PUBLIC HALL, to be called the "Peel Institution," in Accrington, now in course of erection, are to apply at the Office of Mr BANNISTER, Solicitor, Accrington, from FRIDAY, the 22nd to SATURDAY, the 30th inst., between the hours of Ten and Four o'clock, when Plans, Specifications, and Bills of Quantities may be seen, and Tenders received. Tenders must be delivered at the Office of Mr. BANNISTER, Solicitor, Accrington, before the 4th day of OCTOBER next, after which day no Tenders will be received. Further information may be obtained on application to Mr J. GILLIN, Architect, Portsmouth, near Todmorden. The directors do not pledge themselves to accept the lowest Tender. Sept. 20, 1854.

TO BUILDERS, &c.

PERSONS desirous of CONTRACTING for the ERECTION of a COTTAGE Residence Forest-road, Walthamstow, may inspect the plans and specification at the house of Mr. LAND, Stakes Farm, in the occupation of Mr. JOHN COLLICK, Surveyor, 7, Clements-lane, City. Tenders to be forwarded to Mr COLLICK on or before the 28th inst. The lowest will not necessarily be accepted.

MARKET WEIGHTON DRAINAGE and NAVIGATION. To MASONS, EXCAVATORS, and GENERAL CONTRACTORS.—The Trustees of the Market Weighton Drainage and Navigation are prepared to receive TENDERS or PROPOSALS for the TAKING DOWN and REBUILDING of a PORTION of the HUMBER LOCK on the said Drainage and Navigation, the Repairing of the Floors there of, the Erecting and Fixing of New Gates thereto, and the Constructing and Deepening of a portion of the Canal or Main Drain. Plans and specifications may be seen, and further information may be had, on and after THURSDAY, the 5th day of OCTOBER next, on application to Mr. J. W. LEATHER, Civil Engineer, Leeds, and Tenders or Proposals must be delivered sealed up, at our Office in Market Weighton, before ELEVEN o'clock, a.m. on THURSDAY, the 19th day of OCTOBER next.

By order.

J. B. BUNLAND, } Clerks to the
JNO. S. W. KIRKPATRICK, } said Trustees.

Market Weighton, sept. 13, 1854.

EAST LONDON UNION.—To GAS-FITTERS, &c.—Persons willing to TENDER for providing and fixing the GAS-PIPES and FITTINGS required to be done at the New Workhouse, Homerton, for the East London Union, may see the drawings and specifications at Mr. JARVIS'S Office, 29, Trinity-square, Southwark. Tenders addressed to the Guardians to be delivered to me before ONE o'clock on WEDNESDAY, the 11th OCTOBER next. Security will be required for the due performance of the works, and the Board do not bind themselves to accept the lowest or any other Tender.

A. J. BAYLIS, Clerk to the Guardians.

1, Devonshire-square, 15th Sept. 1854.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS, TO BUILDERS and OTHERS. CHESHUNT BURIAL BOARD. — To BUILDERS and CONTRACTORS.—Parties desirous of CONTRACTING for the ERECTION of CHAPELS, ENTRANCE LODGE, HEATING-HOUSE, IRON RAILINGS, and other WORKS on the new burial ground for this parish; also for forming the Roads, Paths, Drainage, &c. may view the Plans and Specifications for the same at the Office of the Architects, Messrs. JACKSON and SON, Cheshunt, on and after Monday next, at which Office Forms of Tender may be obtained, and to which Tenders, Sealed and Endorsed, "Burial Board Works," are to be sent in, not later than TWELVE o'clock, at NOON, on the 4th instant. The Board do not bind themselves to accept the lowest or any other Tender.

By order of the Board,
J. DEATH, Clerk.

Cheshunt, September 6, 1854.

TO ROAD CONTRACTORS AND OTHERS.

THE DIRECTORS of the ECONOMIC FREEHOLD LAND SOCIETY are prepared to receive TENDERS for the formation of the ROADS, DRAINS, Iron and RAIL FENCING, and other works, on their estate at Wood green, Hornsey, Middlesex. The plans, sections, drawings, and specifications may be seen at the Office of the Society's Surveyor, Mr JOHN WILLIAM MILNES, 32, King William-street, City, London-bridge, and to whom Tenders are to be addressed. No Tender will be received after FOUR o'clock precisely on the 27th instant, nor any Tender noticed, unless strictly in conformity with the form supplied by the Surveyor, and signed by the party or parties tendering. The Committee of Management appointed for the examination of the Tenders do not bind themselves to accept the lowest or any Tender. All Tenders to be addressed to, and further particulars obtained from, Mr. JOHN WILLIAM MILNES, Land Agent and Surveyor, 32, King William-street, City, London.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of submitting TENDERS for the ERECTION of a DWARF WALL, PIERS, &c. for enclosing the Burial Ground, recently purchased for the Parish Cemetery, may inspect the plans and specification on application on any day (except Sunday) between the hours of 10 and 4 at the Office of the Architect and Surveyor, Mr. WEHNERT, No. 1, Church-row, Upper Holloway, and send sealed Tenders, to be delivered at the Office of the Churchwardens, Messrs. WEHNERT and ASHDOWN, No. 3, Bank-chambers, Upper Holloway, on or before SEPTEMBER 14, 1854, at Twelve o'clock at Noon. Each Tender must be delivered separately, and must be addressed to the Churchwardens, and endorsed "Tender for Dwarf Wall, &c." The Three Tenders considered most reasonable will be required to attend the Vestry on Monday, the 18th instant, when the Tenders will be read at the Office of the Architect and Surveyor, and the Tender which may appear to be the lowest will be accepted, but the Churchwardens do not bind themselves to accept the lowest Tender. Two sufficient Sureties will be required for the due performance of the works.

BRISTOL LOCAL BOARD of HEALTH.

TO BUILDERS, CONTRACTORS AND OTHERS.

The Committee of the Bristol Local Board of Health hereby give Notice, that they are desirous of receiving TENDERS from Parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING AND COMPLETELY FINISHING, certain intended BRICK SEWERS, as follows, viz.:—

CONTRACT No. 1 ... from Cotham Lane into the River Avon, about 2,070 yards in length.

CONTRACT No. 2. Main Branch Sewer, along the Whiteladies Road, for high and south, about 2,197 yards in length.

CONTRACT No. 3 ... Main Branch Sewer, in Richmond Park ... yards in length.

CONTRACT No. 4.—Main Branch Sewer, for Church and Kingsland ... yards in length.

Any person or persons willing to engage for the same, or either, or all of the above-named Contracts, are requested to deliver separate Tenders for the same and Contracts at the Offices of the Local Board of Health, No. 14, Prince-street, on THURSDAY morning, the 24th day of AUGUST next, at Eleven o'clock precisely, when the Committee will meet to determine upon the same.

Plans, sections, and specifications of the works to be done, may be seen at the Offices of the Board of Health, No. 14, Prince-street, Bristol, on any day (except Saturday) between the hours of Ten and Four o'clock, and Tenders must be addressed either on printed forms, or on letter paper, addressed to Mr. HENRY BUCKLAND, Surveyor, Mr. HENRY BUCKNALL, Clerk.

The parts tendering will be required to give the names of two responsible persons with whom the securities for the due performance of the works are proposed.

The Committee will not be bound to recommend the acceptance by the Local Board of the lowest or any Tender, nor until the proposed Sureties have approved.

By order of the Committee,

HENRY BUCKNALL HARRIS, Clerk.

Local Board of Health Offices, 14, Prince-street, Bristol.
24th August, 1854.

TO IRONFOUNDERS.

PERSONS desirous of submitting TENDERS for the IRON RAILING, GATES, &c. for enclosing fifteen acres of land as an Addition to the Highgate Cemetery, may inspect the plans and specification on application at the Office of the Architects of the Company, Messrs. WEHNERT and ASHDOWN, No. 3, Bank-chambers, Upper Holloway, on and after the 20th day of SEPTEMBER next, and Tenders to be delivered at the Office of the Company, Finsbury-pavement, Old Broad-street, on or before the 4th day of OCTOBER next, endorsed "Tender for Iron and Gates," and addressed to the Directors. Two sufficient Sureties will be required for the due performance of the works.

TO DRAIN CONTRACTORS.

CHELSEA IMPROVEMENT ACT.—The Commissioners for Paving, Lighting, Cleansing, Regulating and Improving the Parish of St. Luke, Chelsea, exclusive of the District of Hans Town, in the County of Middlesex, at the Meeting to be held at the Office, on TUESDAY the 26th inst. at ELEVEN o'clock in the forenoon precisely, will receive TENDERS from Persons willing to CONTRACT for a period of one year, from Michaelmas next, pursuant to the terms of a draft contract now lying at the Office of the Surveyor to the Commissioners, for EMPTYING and REMOVING the DUST, ASHES, and RUBBISH which are to be the property of the Contractor, from the several houses in the streets and places under the jurisdiction of the Commissioners, at the commencement of each quarter, at the rate of [illegible] per cent on such quarter's rent of the houses, to be paid to the Contractor at the Office, at the end of each quarter, after the delivery of the Tender, and a further sum to make up a moiety of the sum offered shall be paid to the Contractor at the end of what three days after and the remainder on the 25th day of MARCH next. Sealed Tenders, endorsed "Tender for Dust and Ashes," and addressed to the Commissioners, are to be delivered at the Office of the Surveyor, at the Office, Five Oaks Yard, Chelsea, on or before the 26th inst.; but the Commissioners do not bind themselves to the acceptance of the lowest or any of the Tenders delivered. The Board hereby reserve to themselves the power of rejecting the whole or any part of the Tenders that are opened. Printed forms of Tender to be filled up may be obtained at the Office of the Surveyor, where a copy of the draft contract may be seen.

By order of the Board,

JOSEPH PAXTON SMITH, Assistant to the Commissioners.

Dated this 22nd day of September, 1854.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

NOTICE is hereby given, that the Council of the Royal Horticultural Society are prepared to receive DESIGNS, PLANS, and MODELS, in Brick or STONE, for TWO CEMETERY CHAPELS, or a Building containing both together with a LODGE and EXTRANCE GATES, of not an expensive character, to be erected in the Gardens of the Society, at Chiswick, near the Hammersmith and Turnham Green Stations of the London and South-Western Railway, and Putney Bridge Station of the London and Richmond Railway.

The Council do not bind themselves to accept any of the Designs, but will award a premium of 10*l.* to the person whose design, plan, and estimate may be approved of. The plans for the Chapels must be on a scale of one inch to the foot, and elevations. The Council do not limit the amount of the cost of the new buildings, but they wish the Chapels to be erected for a sum not exceeding 2,000*l.*

The Designs, Plans, and Models must be delivered at the Office of Mr. MICKLETHWAIT, the Corporation Surveyor. The plans, &c. to be sent in free of carriage, and addressed without the author's name, and to be sent in before NOON on the 29th day of SEPTEMBER next, and marked on the back with a motto, or device, marked "Cemetery." A sealed letter, containing the author's name and address, corresponding to any one plan, which will be open after the decision has been made. The plan receiving the first premium will become the property of the Society.

By order,

GEO. BABB, Town Clerk.

Town Clerk's Office, Great Grimsby, September 11, 1854.

ROAD and PATH MATERIALS, Parish of HAMMERSMITH.—Notice is hereby given, that the Board of Works for the Parish of Hammersmith are desirous of receiving TENDERS for the supply of the following Materials, for such time as they may direct, 480 yards of BROKEN GUERNSEY GRAVEL of the size of 1 inch, at per yard; 240 yards of the best Guernsey Pitching Stone, as per ton; 330 yards of the best Welsh or Scotch Granite Kerb, as per ton; 1 pair of Iron Gates, as per pair; 11 yards of Portland Curb, set upon by Parish Pitcher in good, workmanlike manner; 11 yards of Portland Stone Sill to Parish Pitcher's house, as per yard. Tenders to be delivered at the Board Room, Hammersmith, by TEN o'clock p.m. on TUESDAY, the 26th inst. The Surveyors do not bind themselves to accept the lowest or any Tender.

By order of the Board,

September 13, 1854. W. D. SALTER, Clerk.

BARNES CEMETERY.—To BUILDERS and OTHERS.—Part 2 Sections of CONTRACTING for the TWO PENT WALL and IRON RAILING for the Cemetery, as per Plans and Specification now lying at the Office of the Board, and which may be seen on and after MONDAY, the 18th of SEPTEMBER, by leave, the Boards of Works for the Parishes of Barnes, Mortlake, and Barnes.—All Tenders to be sealed, and delivered to the Clerk Inwardsw, Messrs. BIDDELL and RATCLIFFE, of the said parish, on or before the 2nd day of OCTOBER. The lowest, or any Tender, will not necessarily be accepted.

HENRY BIGG, }
H. H. RATCLIFFE, } Churchwardens.

CONTRACTS.

BUILDERS desirous of CONTRACTING for the ERECTION of a new CHURCH at Cord Norton, in the county of Essex, for the Rev. H. Hilland, may see the plans and specification at the Office of G. E. FRITCHETT, Architect, Bishop Stortford, Herts, on and after the 9th day of OCTOBER. Tenders to be delivered to the Architect on the 9th day of OCTOBER next. The Rector does not pledge himself necessarily to accept the lowest Tender.

THE WARDENS of the BIRMINGHAM HEBREW CONGREGATION are prepared to receive TENDERS for the ERECTION of a SYNAGOGUE, RESIDENCES, SCHOOLS, &c. The drawings and specification may be seen at the Offices of the Architect, Wellington-chambers, Bennett's hill on and after the 26th inst. Tenders, sealed and endorsed, addressed to the Warden, to be delivered to the Architect, on or before the 12th day of OCTOBER next. The acceptance of the lowest Tender is not guaranteed, and parties must be prepared to give proper security, if required.

H. R. YEOVILLE, Architect.

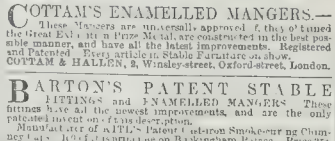
COVENTRY LOCAL BOARD of HEALTH.—To SEWER CONTRACTORS and Others.—Proposals are invited for CONTRACTING for the CONSTRUCTION of about 1,140 YARDS of BRICK SEWERS, and 2,080 YARDS of PIPE BRANCH SEWERS in connection therewith according to the plans and specification, which may be seen at the Office of Mr. ROBINSON, C.E. 18, Grand-row, Hill-street, Coventry, between the hours of TEN in the forenoon and ONE o'clock p.m. of each day, until MONDAY, the 2nd day of OCTOBER next, are requested to send sealed Tenders, endorsed "Tender for Sewers," to the Town Clerk's Office, Little Park-street, Coventry, on or before TEN o'clock in the forenoon of the aforementioned day. The Local Board will declare the whole of the works to be completed on or before the 1st day of JULY, 1855, in such manner and such time as they may direct, and they do not bind themselves to accept the lowest or any Tender.

By order of the Local Board of Health,

THOMAS HALL TRUGHTON, Town Clerk.

Coventry, September 13, 1854.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years as at the above building. A great variety in stock upon the same principle. Gas Baths from 7*l.* 7*s.* which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from H. DEFRIES'S celebrated ORY GAS METERS upwards of 80,000 in use.—See testimonies at the Office, 145, Regent-street, or at the Manufactory, New road, St. Pancras, near Pitterey-square.



WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of June 24, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr. Bloxe shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is cleanly in all its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; Improved Boilers, requiring little attendance; WARM AIR Apparatus, &c.—Applications to J. TAYLER, Engineer, Battersea.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of PEILL'S PATENT UNIVERSAL and improved CENTRAL IRON BOILERS and Heating Apparatus, and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and market growers to their simple but efficacious mode of warming horticultural, and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A room, or suite of rooms warmed by hot air only, at Messrs. Farmer's, in burning lumps of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEAVE'S PATENT CALORIFERE. The constant supply of fresh air carried out at command, by a new and improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Price per foot. M. BOILEAVE, French Engineer, 75, King William-street, City.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patented invention of this description.

Manufacturer of BARTON'S Patent Lisbon Smokeless Chimney Cans. Inventor and Patentee of the Buckingham Palace Price 35*s.* each. JAMES BARTON, Iron Founder, Smith, &c. 474, Oxford-street, a few doors east of the Pantheon.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices. JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker street, Portman-square.

CHUBB'S LOCKS & FIREPROOF SAFES.

UNEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North Western Railway Company,
"Liverpool, May 17, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION

"5, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to your manufactory, and shall feel obliged if you will have it repaired. I am, gentlemen, your obedient servant, "JOHN OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hob-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

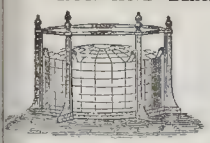
No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS. DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Softness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so softens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18	oz.	per foot super.		
No. 13	"	"	"	20 oz.	do. do.
No. 13	"	"	"	24 oz.	do. do.
No. 14	"	"	"	28 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

PATENT.

BUILDERS will find that the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour. Can be had only at WEBB & GREENWAYS, Steelhouse lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener Gothic Pattern Casement, and other Window Fastenings, Double-action Floor Door-springs, Cupboard Furniture, Barrel-bolts, Piston and other Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.

PATENT MORTISING MACHINES.—Builders and Joiners are respectfully solicited (before purchasing a machine) to inspect France's Patent, to be seen at 30, North Wharf-road, Paddington; they may be had on trial, and if not approved of returned. Price from 12*l* 12*s* with set of chisels complete. Every description machines for wood-cutting made to order on the most approved principles.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are most respectfully called on the Patentees, POWIS, JAMES, and Co. 26, Wells-street, City, and are requested to see this very useful, economical, and expeditious machine, which is the only object brought out for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill to operate in using like the older mysterious machines. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contract for.

CUT NAILS.

Established A.D. 1783

1*l*, 19*s*.; 1*l*, 18*s*. 9*d*.; 2*l*, 17*s*. 9*d*.; 2*l*. 17*s*.; 3*l*. 16*s*. per cwt.

HAYWARD, BROTHERS, IRONMONGERS,

196, BLACKFRIARS-ROAD.

THE PATENT GALVANIZED IRON.

TUPPER and CARR,

Owners of Crawford's Patents, and Successors to THE GALVANIZED IRON COMPANY,

Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes Castings, Wire of all gauges, Gutterings, Hoopings, &c. Wholesale, retail, and for export.

An allowance to the Trade.

GALVANIZING WORKS,

REGENT'S CANAL DOCK, LIMEHOUSE;

BROAD-STREET and BERKLEY-STREET, BIRMINGHAM

LONDON OFFICE, 3, MANSION-HOUSE PLACE.

IRON BUILDING AND ROOFING WORKS, BIRMINGHAM.

PORTER (BROTHERS) AND STUART

(LATE JOHN H. PORTER),

IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON.

(IMPROVED PROCESS.)

JOHN SYMONDS and CO.

WORKS—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process) Works at the Regent's-canal-bank, Commercial-road, Limehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every size, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water Pipes; Hoopings, Castings, Furnace pans, Baths, Bedsteads, &c. Wholesale, retail, and for export. Every description of Sheet Iron so Galvanized, Buckets, Pails, &c. kept ready Galvanized. Estimates and drawings for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated, also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Fire-proof Ornamental Stable Fittings supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring a Roof, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cheapness, durability, slow transmission of heat, and non-liability to fire-proof. Drawings and estimates furnished.

Island Foundry and Iron-works, Millwall, London.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 3 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

In lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, thereby forcing the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in making the application of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well-suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,
PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Dellruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Girders, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES
Office, No 7, Sise-lane, London.

BRAMLEY FALL AND POTTERNEWTON STONE.
HARTWOOD GRIT STONES.
SAMUEL TRICKETT,
STONE MERCHANT.
Prices and samples furnished. Delivered to any part.
Address—VICTORIA STONE WHARF, ISLE OF DOGS.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUESTER respectfully informs Builders, Masons, and Others that he continues to supply the Box-hill Ground Stone, Corsham Down, Combe-down, and Farleigh-down Stone, of the best quality, and at the lowest prices. Painswick and Forest of Dean Stone in block, steps, landings, or sale of any thickness.
N.B. Stone and other goods landed and carted.

BATH STONE DEPOT, BOX STATION.
ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalliet Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

MONUMENTS! MONUMENTS!—For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Baytor Wharf, Rotherhithe, London.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager JAS J TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOARE, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City, and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sinks, &c. &c. at the lowest wholesale prices. Note.—No charge made for supplying to dimensions.—Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply them only from the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico.

INDURATED STONE COMPANY, for rendering all Soft Stone, Bricks, Tiles, and Building Materials of all kinds, hard and impervious to weather or moisture.
Capital, 50,000l. in 1l. shares—10s. to be paid on completion of registration, and the remainder at call. Under her Majesty's Royal Letters Patent. Provisionally registered under 7 and 8 Vict. cap. 110.
Prospectuses, containing the various uses to which this invaluable patent may be applied, and also the expressed opinion of the most eminent geologist of the day, may be had at the Offices of the Company; of Messrs. PAGDEN and HODGKINSON, solicitors, 71, Mark-lane; of N. E. STEVENS, Esq. Managing Director at Tunbridge Wells; of EDWARD ROBERTS, Esq. 16, Hollestreet, Cavendish-square, Surveyor to the Company; and of GEORGE RAWFORD, Esq. 9, Warnford-court, Throgmorton-street, broker to the Company.
Applications for shares to be made to the Managing Director at Tunbridge Wells; to the Solicitors; and to the Broker. Offices of the Company, 14 and 15, St. Swithin's-lane, and High-street, Tunbridge Wells. The works are in operation at King's Quarry, Tunbridge Wells.

PATENT OFFICE, 4, Trafalgar-square, Charing-cross.—Inventors may be furnished gratis with the DATE and TITLE of any PATENT granted from 1617 to the present time, and a CIRCULAR of INFORMATION as to the new Patent Law, and the facility of protection for inventions in the United Kingdom and foreign countries, by applying personally or by letter, prepaid, to Messrs. PRINCE and CO.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, Levant House, St. Helen's-place, Bishopsgate; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is not affected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calcinated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. E. MORLEY and CO., and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 82, King William-street, City. JACK and BRADY, Wholesale and Retail Agents, 8, Tolter-lane-court, New-road, and 20, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 28, and 32 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 19, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined to the rest to the use of the nobles, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter by the name of "covering." That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK ..LONDON..PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of the finest cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 6s 15s and 21s. each, casks exclusive

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s 6d each

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unobjectionable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, larger park railing, &c. 3s. per gallon

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 12 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

WHITE OXIDE of ZINC and ZINC PAINT. (Lanaston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY. Sole Manufacturers, now supply this innocuous substitute for White Lead to shippers and the trade, either in powder or paste, of genuine quality, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe

Zinc Paint is below the price of white lead, possesses equal body, and is perfectly unobjectionable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PORTLAND CEMENT.—CHARLES RICHARDSON has the pleasure to announce to the Trade the above-superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cement). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

6, South Wharf, Paddington.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is consequently cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Alnmouth-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works, situate Bridgewater and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Parian Parian (under patent), and all other Cements in use for builder purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties, that it is not effected by frost, and takes not reactate in damp situations.—Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, and obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Parris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks Grindstones, Cement Chimney-tops ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also particularly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground render it cheaper for concrete or stucco than any other lime or cement. The shortest time for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzie, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Fred-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statue of Austria, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian copies of Temple, Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

TO CEMENT MANUFACTURERS.

A RESPECTABLE PARTY, having a good connection, is desirous of obtaining an AGENCY, on commission, or salary, for the sale of Portland and other Cements. Address, A. B. Mr. G. Longley's, 4, Union-place, Blackman-street, Borough, London.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING, is the result of practical experience and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s 6d. Prepared only by W. J. STENT, Warminster. London Agents—Messrs. J. and G. WALLIS, 64, Long-acre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway. Apply to HIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

MAW'S ENCAUSTIC TILE PAVEMENTS—A highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance halls, passages, verandahs, conservatories, &c.

MAW and CO Manufacturers of THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM

in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, esq. in "Official Handbook"), send, free of expense, their pattern and price book.

Benthall Works, Broseley, Salop.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 65s per 1,000; Floor Bricks and 6-inch Pavings, at 40s per 1,000; 8-inch Pavings, at 60s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line

BRICKS.—From Kent-fields.—Grey stock, shipping, paviors, &c. of superior quality; also, white Suffolk, and red facings.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address Mr. WM. WEBB, Brick-fields, Stoke Newington.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington-butts.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 45s.; Cowley Stocks 35s at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London. Builders, Engineers, Gas Companies, and others, supplied with every sort of country Bricks and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Corn-drying perforated Tiles, real Dutch Clinkers, River sand, Concrete Gravel, Tunnelled Loam, White and Red House Sand, &c. at the cheapest rate.—Chief Office, 37, Regent-street.

SUFFOLK BRICKS.—About 60,000 very hard 3-inch BRIMSTONE BRICKS, suitable either for paving or facing, TO BE SOLD, at a low figure. Every description of White Paving and Drain Tiles of superior quality. Stocks, Red Bricks, &c.—Address RUSSELL, BLACKETT, Witham.

TO BUILDERS, CONTRACTORS, AND OTHERS

THE LONDON PATENT BRICK COMPANY are now prepared to enter into contracts for the supply of Bricks made by BURTALL'S PATENT. Apply to JOHN A. S. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

TO BRICKMAKERS.

THE LONDON PATENT BRICK COMPANY (Burtall's Patent) are now prepared to enter into arrangements for the USE of the MACHINES in the London district. The chief advantages of these machines, which may be seen in full operation at the Company's works, are, the superior quality and economy of manufacture, the bricks (produced from dry clay) are conveyed at once from the machine to the kiln, and are ready for delivery in fourteen days after they are made, thus avoiding all the usual damage, delays, and expensive process of drying, &c.; the machinery and buildings occupy a very small space. Terms and further particulars may be had on application to J. A. DUFF, at the Company's Offices, 8, Old Jewry

TO BRICKMAKERS AND OTHERS.

TO BE SOLD, by Private Contract, sundry PLANT belonging to a Brickfield.—For particulars, apply at the Grand Surrey Canal Brick-fields, Plough-road, Rotherhithe, between the hours of TEN and THREE

TO BRICKMAKERS.

A BRICKFIELD TO BE LET, at East Finchley, on the Barnet-road, known as the White Lion Field, opposite the White Lion, within half a mile of two cemeteries. Stabling, sheds, and counting-house are erected on the premises.

TO BRICKMAKERS.

WANTED, to exchange, BRICKS. The Advertiser to deliver alongside on the Grand Junction Canal, for offers to be delivered at the Harrow Station per rail.—Address, Mr. LINFIELD, Norfolk square, Paddington

GUARDIAN FIRE & LIFE ASSURANCE

COMPANY, No. 11, Lombard-street, London.

DIRECTORS.

Sir Walter R. Farquhar, Bart. Chairman.
Francis Hart Dyke, esq. Deputy-chairman.

A. W. Roberts, esq.	Henry Sykes Thornton, esq.
Lewis Loyd, jun. esq.	John Henry Smith, esq.

SECRETARY.—Geo. Keys, esq.
ACTUARY.—Griffith Davies, esq. F.R.S.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now offers to future assurers four-fifths of the profits, with the enjoyment of a division, or a low rate of premium, without participation in profits.

The next division of profits will be declared in June, 1855, when all Participating Policies which shall have subsisted at least one year at Christmas, 1854, will be allowed to share in the profits.

At the several past divisions of profits made by this Company, the reversionary bonuses added to the sums assured are from one-half the profits annually declared to be due to the then existing assurances, and the bonuses thus added at the four preceding divisions exceed 47 per cent.

FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to assure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50*l.*

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

Medical fees paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Michaelmas must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

PHŒNIX FIRE ASSURANCE

COMPANY, LOMBARD-STREET & CHARING-CROSS, LONDON, established 1782.

John Hodgson, esq.	H. Westmacott, esq. F.R.S.
John Edward Johnson, esq.	Josiah Wilson, esq.
Richard Lambert Jotzer, esq.	Benjamin G. Windus, esq.

The New Tables adopted by the Globe include Two Scales of Life Premiums, Participating and Non-Participating, combining, with undiminished security, some principles of strength and security which have distinguished this Company from its formation.

Two-thirds of profits appropriated as Bonus.

One-third of the premium may remain unpaid as a debt upon the policy.

Facilities afforded to Insurers.

Insurance to the extent of TEN THOUSAND POUNDS on a single approved life.

Every class of FIRE and LIFE Insurance business transacted.

Prospectuses, with full tables and details, and forms, may be had at the Company's offices, or of the Agents.

WILLIAM NEWMARCH, Secretary.

ANNUAL DIVISION OF PROFITS.

GREAT BRITAIN MUTUAL LIFE

ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman

Colonel Michael E. Bagnold.	William Morley, esq.
Francis Brodigan, esq.	Robert Francis Power, esq. M.D.
Alexander Robert Irvine, esq.	Arch. bald Spens, esq.
John Inglis Jerdein, esq.	Frederick Valiant, esq.
James John Aird, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1854, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that the Assurances in 1853 considerably exceeded in effected in any previous year, the number of Policies issued being more than 400, and the annual income thereon being upwards of 7,500*l.* It also appeared that, except in 1849, when the visitation of the cholera took place, the claims arising from deaths were, in every year, much below their estimated amount.

The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 31½ per Cent. should be made in the current year's Premium payable by all Policy-holders now entitled to participate in the profits.

Credit is allowed for Half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction :—

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 31½ per Cent	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	27 13 4	8 18 8	17 11 8
40	1,000	34 18 4	10 13 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	75 17 6	23 18 0	51 19 6

A. R. IRVINE, Managing Director.

14, Waterloo-place, London.

GREAT REDUCTION in the PRICE of FLOORING.

—A large Stock of SEASONED FLOORING always on hand at the following prices :—

				Per square.
⅜ inch (3 cuts in 24 inch), yellow				18s.
½	"	"	"	20s.
⅝	"	"	" white.	15s. 6d.
1	"	"	"	19s.

Yellow Battens, 3s. 6d.; White, 3s. 9d. per 12 feet.
Yellow Battens, 3s. 6d.; White, 3s. 9d. per 12 feet.
Pine Planks, 5s. 6d. per 12 feet.
Swede Timber, per load 62s. 6d.
Dantzic " 68s.

A and A. beg to inform their customers they have now taken off the 20 per cent. from their mouldings, and the prices will be the same as last heretofore

ARCHIBALD ATKINSON, St. Pancras Saw Mills, Cambridge street, Old St. Pancras-road

MAHOGANY, &c. GREAT REDUCTION.

SAMUEL PUTNEY begs respectfully to solicit the attention of Manufacturers and Others to the reduced prices of his dry Stocks of Spanish and Honduras Mahogany, Wainscot, Pine Planks, Deals, &c.

Spanish Mahogany in planks and boards, from 8*l.* per foot super.			
Honduras ditto	"	7½*d.*	"
Wainscot	"	9*d.*	"
Yellow Deals, 12 3 by 6		4s. 6d. each.	
Spruce ditto	"	3s. 9*d.*	"
Dry Pine Planks, 12 3 by 11		4s. 6*d.*	"
Spruce Palings Laths		6*d.* per 120.	

An extensive Assortment of Veneers and Cut Stuff of every description always on hand, at equally low prices.

Borough road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS

(late William Cleave), of Wilton road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand at his Manufactory (the first of its kind ever established), a very large Assortment of Plain and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¾ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory Wilton road Pimlico Basin.

TIMBER WHARF, SAWING, PLANING,

and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 2*s.* per cent. on their bills (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

TIMBER.—To RAILWAY COMPANIES,

CONTRACTORS, BUILDERS, &c.—MACKINNON and CO. Commission Agents, Montreal, Canada, and Agents in North America for Messrs. Farlam and Sons, Manchester, &c. &c. are prepared to make selections and purchases in Canada, of oak elm, ash, birch, red and white pine, spruce, hackmatack, &c. either in bulk or specified lengths, or cut to any scantling, such as suitable for railway sleepers, railway waggon and carriage in mundane, flooring or roofing purposes, sheet piling, &c. &c. thereby saving waste freight, and additional cost of cutting up in England. MACKINNON and CO. are also prepared to state prices (in sterling money) of above, delivered free on board, at Montreal or Quebec.

Montreal, 12th July, 1854.

References.—Messrs. Farnham and Sons, Manchester; Messrs. Laurie, Clark, and Co. Liverpool.

WANTED, a CARVED OAK CHIMNEY-PIECE,

in good condition. The total height not to exceed 9 ft. 6*in.*, or thereabouts. Price will be between the sums usually given.—Apply by letter only, stating price, to R. J. care of Messrs. ELFORD and SON, 3, Great Pulteney-street, Golden-square.

By Her Majesty's | Royal | Letters Patent.

VENEERS CUT for the TRADE (by Knife

only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is gained over the ordinary method of cutting veneers.—For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 24, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

PREPARED FLOORING, &c.—ALFRED

ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in board for export.—Southwark-bridge Wharf, Bankside.

ACORN TIMBER WHARF, Canal-bridge,

Old Kent-road.—RICHARD MAY has now on Sale Goods imported this year from the American and Baltic Ports. He asks special attention to the following :—

2,400 Pieces of Timber
15,000 Planks, Deals, and Battens.
Planed Tongued Floor Boards, of all lengths and sizes.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All Kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

TO TIMBER MERCHANTS, SHIPWRIGHTS, GOVERNMENT CONTRACTORS, AND OTHERS.

TO BE SOLD, by private contract, the

splendid OAK TIMBER, of large dimensions and beautiful quality, growing on nearly 40 acres of land. This wood is reported to be the finest in the county of Suffolk.—For prices and particulars, apply to Messrs. COOK, Land Agents, Colchester.

STAINING WOOD to IMITATE OAK,

for Churches, Chapels, School-rooms, Staircases, &c. Brings out the grain of the wood in a beautiful manner, and when used with the proper varnish will never fade. Price 6*s.* per gallon. Prepared Varnish, 10*s.* to 12*s.* per gallon.—WILSHERE and CO. 9, Talbot court, Gracechurch-street, London. Agent, 14, St. David-street, Edinburgh.

STAINING DEAL TO IMITATE ALL

KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6*s.* per gallon. Varnishes for W. N. SAYLOR'S staining may be had at the Factory, 44, and 55, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

LOANS.—Persons desirous of obtaining

ADVANCES, from 50*l.* to 250*l.* upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES.—Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6*d.* each copy, or 1*s.* per post.

CHARLES JAMES THICKE, Resident Secretary.

MONEY LENT on PERSONAL

SECURITY, LEASES, LIFE POLICIES, &c.—Sums from 3*l.* to 300*l.* advanced two or three days after application, for two or six, one year, or six months, repayable any day in the week, by weekly, monthly, or quarterly instalments; and good bills discounted. Charges moderate, and strict confidence observed.

LONDON and PROVINCIAL LOAN and DISCOUNT COMPANY, Private Office, 69, Cheswell-road, London. Open daily from nine till eight, thus avoiding inconvenience or publicity.—Forms of application and prospectus gratis, on receipt of stamped envelope. H. FLEAR, Manager.

GUTTA PERCHA TUBING.—May be

buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 280 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INCLOSED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

FOUNDATIONS OF HOUSES.

THE PRACTICAL MECHANIC'S

JOURNAL, Part 78, September. 1*s.* Illustrated by two large Plates, Engravings of Harman's Patent Acting Screw Engines, and Thirty Woodcuts. Articles upon Boiler Explosions: Education; the Laws as to Patents in Europe; Harman's Direct Acting Screw Engines; Notes on Lime; Submarine Electric Telegraph between Europe and America; American Notes, by our own Correspondent; The Crystal Palace Specifications of new Patents; Printing Surfaces, Graham; Railway Wheels, Morrison; Railway Brakes, Johnson; Grain Mills, Johnson; Pistons, Hinchliffe; Zincographic Printing Machine, Reed; Dyeing, Johnson; Safety Planting Dress, Johnson; Foundations of Houses, Bird; Steam heated Clay Still, Lister; Railway and Alarm Signals, Norton; Reviews of Books, Proceedings of Societies; Monthly Notes; Law Reports in Patents and designs; Lists of all new Patents.

London, G. Henry, 28, Clement's-lane, Editor's Offices, Offices for Patents and Designs, 47, Lincoln's-inn-fields, London, and 166 Buchanan-street, Glasgow.

Just published, price 6*d.*

THE SMOKE QUESTION SIMPLIFIED.

Being a Lecture on the Prevention of Smoke, delivered before the United Service Institution, at the request of the Council.

By T. SYMES PRIDEAUX, Esq. Author of the Treatise on Economy of Fuel in Weale's Series.

Published at the office of the Smoke Prevention Company, 32, Charing-cross, opposite the Admiralty; and by JOHN WEALE, 59, High Holborn.

THE FREEMASONS' QUARTERLY

MAGAZINE, New Series, Enlarged, price 2*s.* 6*d.* A specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VII. for July, just published.

GEO. KOTTERLEE and CO. 2, Crampton-street; and R. SPENCER, 314, High Holborn.

TO LAND SOCIETIES.

Just published, in one vol. with upwards of forty plates, price 3*s.*; by post, 3*s.* 6*d.* or stamps.

DESIGNS, SKETCHES, PLANS, and

SPECIFICATION for SUBURBAN VILLAS and COTTAGES, with MATERIALS, including Dwarf Brick Walls, &c. By GEORGE JOHN RHODES, Architect and Surveyor, Author of "Remarks on the Purchase of Landed Property."

New Cross, London. J. R. HALL, 6, Tavistock-row, Covent-garden; or by post, from the Author, 14, Golden-square-fields chambers.

THE EDINBURGH REVIEW, No. CCIV.

ADVERTISEMENTS and BILLS intended for insertion are requested to be forwarded to the Publishers on or BEFORE the 2nd of OCTOBER.

London: LONGMAN and Co. 39, Paternoster-row

In fcp. 8vo. with woodcuts, price 7*s.* 6*d.* cloth,

PROFESSOR BRANDE'S LECTURES on

the ARTS connected with ORGANIC CHEMISTRY, as APPLIED to MANUFACTURES, including Dyeing, Bleaching, Calico printing, Sugar-manufacture, the Preservation of Wood, Tanning, &c. delivered before the Members of the Royal Institution.

JOHNSON'S LIVES of the ENGLISH

POETS, with Critical Observations on their Works.

Edited, with Corrective and Explanatory Notes, by PETER CUNNINGHAM, F.S.A.

To be completed in 3 vols.

"Murray's British Classics, so edited and printed as to take the highest place in any library. Beyond all question the cheapest books of the day."—*Examiner.*

JOHN MURRAY, Albemarle street.

The Builder.

SATURDAY, SEPTEMBER 23, 1854.

A PILE of books which has gradually accumulated upon our table seems to reproach our silence, and to call for more speedy mention than we could hope to give them in the ordinary course. We ought no longer to leave unrecorded, for example, the publication of a Translation of Chevreul's important work, "The Principles of Harmony and Contrast of Colours,"* although we shall do little more than this on the present occasion, as we have elsewhere given considerable space in this number to the subject of colour, and contemplate a further disquisition, which will call for reference to M. Chevreul's book. The important law enunciated by him, that every colour, when placed beside another colour, is changed, appearing different from what it really is, and, moreover, equally modifies the colour to which it is in proximity, has regulated all later researches, and must always be borne in mind by those who pursue the investigation, or deal with colours practically. The translator is truthful against some recent teaching on the subject in England. He says:—

"In books treating on the harmony of colours, it is usual to prescribe the proportions in which colours neutralize or *balance* each other, as the phrase goes, and, moreover, they are classed as *advancing* or *retiring:* this may be the jargon of the dancing-master, but it is not the language of science, and is stated in utter ignorance of the effects of simultaneous contrast. Thus, it is supposed that 5 square feet of red are required to balance or neutralize 3 square feet of yellow, or 8 of blue, without any qualification being made as to the physical or optical qualities of the coloured materials employed, or the modifications their colours experience from juxaposition. This formula is apparently an empirical application of Newton's analysis of the spectrum, and of the proportions of the primaries and secondaries required *theoretically* to constitute white light. But to attempt to employ it mechanically with pigments of impure colours, as recommended by the writer alluded to, is to place a stumbling-block in the path of those undertaking the study of the subject."

M. Martel, the translator, makes occasional slips, as, for example, where he says in his preface that it must ever be regarded "as a highly *fortuitous* circumstance that this subject came under the investigation of so philosophic a mind" as that of M. Chevreul; but upon the whole the original is fairly rendered. The work will be found to be of the greatest value to all who are engaged in decoration, paper staining, and the preparation of furniture, and we recommend it to their careful attention. Brought as it is within the reach of all, by a low price, it ought to produce considerable effect in many branches of manufacture.

With reference to furniture, we would mention a very useful "Cabinetmaker's Assistant," published by Blackie and Son,† as containing a large number of suggestive designs of various degrees of merit, with some good practical observations, and useful particulars of the different woods.

Wood and woody-fibre are scientifically treated of in an interesting series of Lectures by Professor Brande on Organic Chemistry, just now published, under the editorial arrangement of Mr. J. Scoffern, late Professor of Chemistry at the Aldersgate College of Medicine.* This series constitutes the last of those delivered by Dr. Brande to the Royal Institution, with which he was connected for upwards of forty years, and from which he retired in 1852. Any eulogium on the pupil and friend of Davy, and the master and colleague, as well as friend, of Faraday, would here be uncalled for. Suffice it to say, that no failing vigour appears in this last professional effort of the lecturer, except a record of the loss of voice which mainly induced him to resign his onerous functions.

What a curious field of magical metamorphoses we are having evolved in organic chemistry! The subject, nevertheless, may be said to be as yet only in its infancy, although already immense interests have been built upon it and its metamorphoses as their essential, or their sole foundation. The *matériel* of organic chemistry is mainly or essentially a three-fold composition of carbon, hydrogen, and oxygen; and many of its wonders are evolved simply by altering the relative quantities and compositions of these three elements, or one or other of them. Nitrogen is another element, however, which also occasionally comes into play, and, indeed, is an essential in the animal portion of the organic material, and also occasionally even in the vegetable. It is also brought into action, together with other elements, drawn from mineral sources, as in the form of nitric acid, which, together with sulphuric and sulphurous acids, soda, lime, zinc, iron, chrome, and various other mineral substances, are made use of in the production of those metamorphoses and other operations, by means of which the organic *matériel* is turned to use. It is thus that organic chemistry comprises the arts of calico printing, bleaching, dyeing, soap and candle making, and many other processes, and it also embraces all that relates to sugar refining, fermentation as in the formation of beer, wine, spirit, &c. hydrocarbons and gas making, tanning of leather, the preparation of silk and cotton, *et multis aliis*.

There are, perhaps, no more striking or curious and interesting metamorphoses within the limits of organic chemistry than those connected with woody fibre, which not only comprise all such changes as the cottonizing of flax, and the corrugation of cotton, by the latter of which process a mere cold solution of soda is made to strengthen and convert the most flimsy cotton fabric into something like substantial calico, and, by help of resists, to impress it with all sorts of colourless pattern figures, and, indeed, prepare it even for colours,—but comprise also an art more peculiarly interesting to our readers, and to which, we think, far too little attention has as yet been directed,—namely, the art of converting the highly combustible—nay, conflagrating—"woody fibre" into a material almost, or wholly, incombustible, and at the same time preventing its destruction by rot. We allude more particularly to lignine or woody fibre in the actual form of wood,—of timber, which, by certain chemical processes, as is well enough known though not yet sufficiently acted on, is convertible into a fire-resisting, if not fire-proof material, the use of which in house building would greatly diminish the number of those terrible conflagrations among human dwellings and other buildings, the prevalence of which has induced us to describe the present mode of building such houses as little better than fire-raising in a chronic form.

The more obvious or designed purpose of those chemists who discovered the several modes of preparing timber in the manner referred to, was to fortify it against rot, itself a slow chemical metamorphosis, to which woody fibre is subject, and which becomes a matter of practical interest scarcely secondary to that of its combustibility, when we consider the dependence of buildings for their support on the timbers used in their construction, no less than on their brick or stone. The rot in timber is a mode of decay of which in general but two sorts are recognised, wet rot and dry. "The former," says Brande, "depends for the most part, if not exclusively, on a real chemical decomposition, referable to the combined agency of air and moisture, exercised at certain temperatures: the latter is chiefly, if not entirely, attributable to the growth of certain fungi—more particularly the *Polyporus destructor*, *Merelinus lachrymans*, and others which are of a more simple nature, all belonging to the genus *Sporotrichum*."

Now the decomposition of timber, from any cause, may be impeded, and, in the case of dry rot, may be altogether prevented, by imbuing the woody fibres with certain mineral solutions. Nor is this the only advantage attendant upon the use of such solutions: all of them which have been suggested, or brought into operation, by investigators, at different times, possess the quality of *diminishing the inflammability* of such timber as may be imbued with them.

Mr. Kyan was the first who practically carried out this idea of imbuing the substance of timber with a metallic solution. The preservative material employed by this gentleman was *corrosive sublimate*, the bichloride of mercury. "When merely considered in relation to its preservative effect," says Brande, "corrosive sublimate answers the purpose desired. There are various objections, however, to its employment. In the first place, it is an expensive material: in the second place, it is a poisonous, and a volatile material. Not only are the workmen who use it exposed to danger from its absorption, but there is reason to fear that living in continuous proximity with Kyanised timbers,—as, for instance, on ship-board,—may be prejudical to the health of a crew thus situated. In short, although the preservative effects of Kyanising are complete, the objections to this mode of preservation were so numerous, that another preservative solution was a desideratum. This desideratum," he adds, "has been fully attained by the invention of Sir William Burnett, who, instead of bichloride of mercury, employs the less expensive, more fixed, and equally efficacious salt, *chloride of zinc*,—a material which, so far from rendering timber injurious to health, possesses the great collateral advantage of being a disinfecting agent; for which purpose it is now indeed commonly employed. With these striking instances before me," he continues, "it does seem extraordinary, not to use a stronger term, that architects, and all who have to employ wood for purposes involving duration, do not avail themselves of so ready a means of preventing the calamities of wet and dry rot. Surely the prevention of these evils should be inducement enough to lead to the extended adoption of Sir W. Burnett's patent, even were the woody fibre thus treated not rendered almost incombustible. But when we add to the preservative effect of chloride of zinc on timber, as regards wet and dry rot, the important statement that such Burnettised timber is, in common parlance, all but incombustible, it does seem most strange, most perverse, I may say, that its employment is not universal."*

There is another metamorphosis of woody fibre to which the hopes of quarriers and miners, as well as of other and less peaceful tribes of men, have turned, but which has not as yet been found to answer the purposes expected of it: we allude

---

* "The Principles of Harmony and Contrast of Colours, and their Application to the Arts." By M. E. Chevreul, Membre de l'Institut de France. Translated from the French by Charles Martel. London: Longman, Brown, and Co. 1854.

† "The Cabinetmaker's Assistant; a Series of Original Designs for Modern Furniture. With practical Observations on the Materials and Manufacture of Cabinet Work." Glasgow, London, &c.: Blackie and Son.

* "The Subject Matter of a Course of Ten Lectures on some of the Arts connected with Organic Chemistry." By William Thomas Brande, D.C.L. &c. &c. arranged from the Lecturer's Notes by J. Scoffern, M.B. &c. London: Longman, Brown, Green, and Longmans. 1854.

* In connection with the subject of woody fibre, we may say that No. 20 of the very useful serial, "Orr's Circle of the Sciences," published by Messrs. Orr and Co. of Paternoster-row, which happens to lie before us at this moment, contains some interesting [illegible] sketches, as well as letterpress, on this matter.

to the singular change of cotton into what is called "gun cotton," by merely steeping it in nitric or nitrosulphuric acid, and afterwards washing and drying it, the cotton still remaining to outward appearance as before, though now converted to a sort of fibrous or woven gunpowder. It was thought that in quarrying, tunneling, and mining, gun-cotton might be relied on as a substitute for gunpowder; but it is variable, as yet, in its action, and not much to be depended on. It even returns spontaneously to its original condition, and might actually be used as before in human drapery! Nevertheless, its employment as a blasting agent seemed to promise a greater measure of success. The total freedom of smoke with which it burns, is undoubtedly a great advantage to the miner, who, frequently, under the present system, is obliged to cease work until the suffocating fumes and smoke of gunpowder shall have slowly disappeared. Unfortunately, however, the use of gun-cotton has been discontinued even for this purpose, chiefly on account of the danger attending its manufacture, and its tendency to explode from the operation of slight causes.

Before quitting this curious subject,—the metamorphosis of woody fibre,—as an illustration of the natural magic of organic chemistry, we may just note, in passing, the singular fact that woody fibre—sawdust, for instance, can be readily converted into gum and even sugar, nay, and into a sort of bread, coarse, to be sure, as yet, but hopeful when we consider that it is actually transmutable by other processes into perfect sugar and gum. By merely pouring a quantity of sawdust on oil of vitriol, and incorporating the two with a glass rod, surrounding the mixture at the same time with ice, to prevent heating and consequent burning to mere carbonaceous matter, the sawdust is actually transmuted into gum; and if this gum be then dissolved in water, and exposed to prolonged ebullition (from thirty-six to forty-eight hours), it will be converted into glucose, otherwise called grape sugar!

The transmutation of saw-dust into deal boards, proposed by *Mr. Puff*, in the play, would seem to be more likely; but the perfectment, if it be possible, of such a process as should transmute woody fibre into wholesome bread, is certainly a work worthy of the exclusive life labours of any one of our most eminent chemists.

Wonderful, indeed, are nature's processes. Look, for instance, at that superb *lilium lanci-folium*—the Lily with the lance-shaped leaves—with which a pleasure-giving hand has just now brightened up our room: gaze upon its wax-like petals, twisted into the most picturesque forms, with the pistil and the stamens, bearing with careful balance the rich brown pollen, thrown out from its snowy bosom, and dispensing around a delicious odour, gladdening a second sense throughout its whole existence: resolve *that* into its few simple elements, and seek the science which shall reproduce the beauteous flower!

An enlarged edition of the "Lectures on Polarized Light," by another eminent chemist, the late Dr. Pereira, has been recently published.* The theory of light on which Dr. Pereira preferred to base the general development of this still somewhat mysterious subject was, as might be expected of any subtle scientific mind of the present day, the undulatory or vibratory, rather than the grosser and more material, atomal, and projectile theory. We have a remark or two to make on the undulatory theory, which, with deference, we hope may be of use in the further development and more perfect understanding of all the beautiful phenomena of polarized light, although we shall not presume here to apply them ourselves to the end in view. The phenomena of polarization developed the fact, that light possesses a singular twofold order of procedure. Now, if the undulatory or vibrative hypothesis be well considered, that also essentially involves a twofold order of procedure. A vibration *is*, itself, in fact, a twofold order of procedure. It involves an advance and a recoil, an expansion and a contraction, or a radiation and a reconcentration. Let this analysis of the synthetical phenomenon which we term a vibration be kept steadily in view, and we very much mistake the consequences if it do not soon shed a new light on the nature of the difference between light polarized and unpolarized, more especially if it also be clearly appreciated that light proper is active force, rather than mere vibration, or rather that the vibrations or undulations in question comprise and resolve themselves, analytically, into the action of radiative, repulsive, or expansive force, alternating with concentrative, contractile, or attractive force, much more than the mere advance and recoil of waves of an ether-fluid as regarded without the explanative and recognised idea of such radiative and concentrative operation or repulsive and attractive force, mutually operative by and between the sun and the planet, through that elastic medium.

It is curious, by the way, and *àpropos* of attractive and repulsive force, to note how new ideas will slowly and silently work their way, ramifying in understrata, as it were, of science, till all of a sudden apparently unconnected facts become associated and identified in open day as a body of evidence establishing the truth of the new idea involved in them all. In the present instance it is a mere significant turn of expression, involving a fact, to which we mean to allude,—namely, that relative to the "negative or repulsive," and the "positive or attractive," used in the work under notice in reference to certain phenomena of polarization. Now some of our readers may remember that six or seven years since in the *Builder* we predicted, in respect to the electric forces, which themselves are closely though mysteriously connected with *those* of light, that the negative would be ultimately found to be more particularly connected with repulsive force, and the positive with attractive force. We afterwards mentioned various incidental facts and circumstances in support of this idea, and now we merely note this in passing as one more.

The name of Dr. Pereira is too well known, and his lectures on polarized light are already too popular to require the aid of any recommendation from us. Pereira was one of the first lecturers who awakened in us a love for experimental philosophy.

If we dally in this way, though, we shall scarcely lessen our heap. The second part of Mr. Fairholt's illustrations of Lord Londesborough's remarkable collection of ancient, mediæval, and Renaissance remains,* includes engravings of some very interesting early heaumes, or helmets, mostly obtained from "Churches in Norfolk"(!) by Mr. Pratt, and of a set of chessman apparently of the twelfth century. It promises to form a beautiful book. —— And what have we here? A manual for travellers upon the South-Eastern Railway, by William Jerdan, the veteran editor of the original *Literary Gazette*.† Mr. Jerdan has produced a very pleasant and useful handbook; and as it is marked No. 1, we may suppose that others are to follow. Speaking of the castle at Tonbridge, the writer mentions its last inhabitant, Mr. Samuel Beazley, the architect, who died there in 1851; and he gives an anecdote illustrative of the sharpness of his conversation when provoked. At a formal party at Theobald's, Mr. Conyers, a wealthy squire, somewhat rudely observed,—"Beazley, do you know what I heard some one say of you the other day? They called you, not Mr. Beazley, but Mr. Beastly." "Oh," replied Beazley, "that is not half so bad as what I heard them call you." *Mr. Conyers.*—"What did they say of me?" *Mr. Beazley.*—"Why, they called you Mr. Conyers!" He could not find a worse name for him. Beazley, who was a great punster,—said the ducks went under water for *divers* reasons,—that the rooks chattered because they had *caws* for conversation and so forth,—if he had taken up the two next books which stare us in the face, Soyer's Shilling "Cookery,"* and Orr's "Carving,"† would have descanted on railway accounts, and Grinling Gibbons. We refer to them more seriously for an instant to say, that they are both very useful little books, and will tend to the improvement of our Homes. Voltaire used to say "the English have a thousand and one religions and only one sauce,—melted butter." Certain it is, that among the working, and even the middle classes in England, they pay much more for coarse wasteful cookery, than would obtain for them agreeable and nourishing viands of the best quality, under proper direction. Even in some decent houses, one needs the politeness of a certain doctor, who, when asked by the mistress of the house how he liked some birds, which were *rather* underdone, said "They are admirable, madam,—*raw*: what would they have been had they been roasted?" Don't try a salad in such a house: they have never learned the simple but important fact, that properly to make a salad you should be a spendthrift with the oil, a miser with the vinegar, a sage with the salt, and a maniac in mixing. What we would more especially refer to, however, is the actual loss of nutriment sustained by the poor through want of knowledge in cookery, a loss which Soyer's book will help to lessen. "Led by an instinct," says Liebig, "which has almost reached the dignity of conscious knowledge, as the unerring guide, and by the sense of taste, which protects the health, the experienced cook, with respect to the choice, the admixture, and the preparation of food, has made acquisitions surpassing all that chemical and physiological science have done in regard to the doctrine or theory of nutrition." It is quite time that the masses in England gave themselves the advantage of this knowledge. In the arrangement of kitchens there is something, too, for our architects and builders to do.

The kitchen affects the whole system of social happiness; and having got down into it we will stop there, and leave the rest of our pile for another day.

ANCIENT LECTERN.

THE annexed sketches of an ancient carved wood lectern may afford a hint or two to designers.

ON COLOUR AND ITS USE IN ARCHITECTURAL ART.‡

WITH regard to colour, the same observation holds good which does with regard to all the other works of the Almighty: "Seek Him where He may be found," is true of all these: specially is it true of light, when we remember by whom it was said "God is light, and in Him is no darkness at all."

Light, then, is the truest emblem of God. Colour is decomposed light. The combination of colours, when they are such as to give forth light, gladden the heart of every child; while they tend to darkness, give a sombre tone to the gayest.

As an emblem of divinity the three-fold div

ANCIENT CARVED LECTERN.

ion of the primal ray is to be noted. Then here are three primary colours—yellow, red, nd blue. From these three in various proporons all other colours are composed. No natual scene occurs in which we do not find their resence. It has therefore been well observed y a recent writer on the subject, "that to atisfy the eye and produce harmony of colours he presence of all the three primaries is required, either pure or in combination." Thus d, when not supported by due quantities of ellow and blue, is harmonised by green, a ompound of blue and yellow. This may be ell illustrated by those who travel in Devonire or South Wales, where the soil is of that escription called the red sandstone.

The foliage in contrast with this dark red arth assumes a deep and gorgeous green. As n example of the same principle, we may cite e common artifice of landscape painters to ace in the foreground of their pictures a gure dressed in positive red—too ordinary a actice not to have attracted the attention of very child who visits one of our London exhitions.

The three primaries, then, are blue, red, and yellow. Their mixture in certain proportions produces the secondary colours—orange, purple, and green. The mixture of the secondaries produces the tertiary or third division of colours. These, though occupying a more extended area, are less known than the primary colours. Orange and green produce a colour called "citrine," from a resemblance to the colour of lemons. Orange and purple produce russet—a warm grey, well known to any who love to gaze at the evening sky. The word "russet," which means a reddish grey, is common in the poets, and is a favourite colour with Turner and all great landscape painters. Green and purple produce "olive," a dark and most harmonious shade of green, such as the foliage of the elm or oak produces when seen on a deep blue sky. This olive green has a most lovely effect when we have a contrast and juxta-position with grey: it cannot be better described than by the effect of ivy clambering over a bit of ruinous stone wall, or the grey of the bark in an aged oak tree harmonising with its dark leaves.

Let us observe, however, the continuance of the three-fold principle.

Primaries.	Secondaries.	Tertiaries.
Blue,	Green,	Olive,
Yellow,	Purple,	Citrine,
Red.	Orange.	Russet.

Upon this division being settled, a very important question arises, upon which, undoubtedly, all questions of harmonious colouring must rest, viz. in what proportions do these colours mingle, so as to produce harmony? Mr. Redgrave, in his little "Manual of Colour," which should be in the hands of every student, quotes Field, who, in his "Treatise on Chromatography," has shown that material colours, mixed in the proportion of *three yellow, five red*, and *eight blue*, are neutralized and destroyed. This division is said to be grounded both upon philosophical inquiry into the nature of the primordial ray of light, and also upon experiments as to the quality of material pigments—the best possible, let us suppose, which the author in question had in his possession. The best possible blue in eight parts, combined with the best reds and yellows in the several proportions of five and three, neutralize and destroy each other; but the best possible blue may be defective in a degree which we can scarcely conceive, while

red and yellow, in the proportions already indicated, may be superior to it. Why nature should have made the colour, or rather the pigments, by means of which we obtain the colour *blue*, so inferior in point of intensity to the reds and yellows, we are not called upon to find out. Suffice it that such is the fact. It is worth note, however, that the atmosphere and water being the chief means of conveying blue to the eye, are, from their nature, incapable of being made the subjects of delicate experiments in the same way as the mineral and vegetable pigments which give us our reds and yellows. No painter can have practised his art without finding the difficulty extreme of getting a *good blue*. French blue, as it is called, greatly tends to purple. Antwerp and Prussian blue, notable for their brilliancy as colours, are remarkable, also, for their tendency to green. Ultramarine (the best that can be had) is the truest blue, and the price it bears sufficiently attests the rarity of blue pigments.* Sir Thomas Lawrence once told the writer of this essay that there was not such a thing as a truly blue flower. This, to those who know the blue salvia, may sound exaggeration; still the rarity of blue among flowers is worthy of note. Let us, however, assume that the proportions given by Field are correct, and that three yellows, five reds, and eight blue parts, neutralize each other. Nevertheless, in actual power, the three primary colours may be equal. By this we mean the colour that is weakest in force has, we may remark, the greatest extension in space, and while it emits but a small portion of light, has an immense absorbent *power*. Compounds of blue, therefore, in colouring, as a ruling tone, are universally agreeable to the eye. They are transparent and unobtrusive. They give distance, and, as a general rule, are the best basis for ruling tree backgrounds, which should be cool. It may be assumed that in every agreeable combination, the primaries are represented in their normal proportions. Take, for example, a picture of Rembrandt's. This, at first sight, may appear to be quite brown, and brown alone; but upon examination, it will always be found, in by far the larger number of cases, to contain a vast mass of cool grey in its background, through which the eye penetrates, and by means of which increased power is given to the ambers and madders, which give such glory to those venerable heads in which every student of colour revels.

It is, however, important to observe, that it is when mixed with other colours that blue is most usually found in nature. The sky itself in this country very seldom exhibits the glorious, pure azure. The more parched and burnt the earth, the bluer appears the sky, as in Italy, and all hot countries. It is not true, however, as some people think, that on a very fine day in England the sky is bluer than at other times. On the contrary, as Ruskin remarks in his "Modern Painters," on fine days the firmament is overspread with a thin gauze-like vapour, which obscures, as it were with a veil of gossamer, the deep blue of the vault above us, and attempers its hue to the grey climate of England. Really gorgeous blue is best seen on those days when this thin veil is gathered up into masses of round white clouds, which separate and display between their openings vistas of the most beautiful colour. Indeed, of all colours, except black and dark purple, blue contrasts white most powerfully. The architect can take advantage of this by vaulting his chambers with blue, and covering this with stars. Vaulting tracery of Caen, or other white stone, would look well over a blue ground. I do not remember to have seen an example of it, though it is common to notice bars of oak upon a blue ground. The celebrated ceiling of the still more celebrated Star Chamber is an example. Mr. Pugin has made use of this decoration in St. George's Roman Catholic Church, Southwark, where it has a good effect. It is a common mode of decorating chancels. Indeed, the vaulted roof especially calls for the employment of this deep azure colour.

Perhaps, however, it is in painted glass that the gem-like lustre of blue can best be seen. The glass in Canterbury Cathedral is of the twelfth century, and nothing finer is anywhere to be found. Blue predominates in those windows, at least in its normal proportion, of eight blue to five red and three yellow. As blue is the safest and best colour for painted glass, so is yellow the most dangerous. This is accounted for from the transparent quality of blue in nature, all natural blues, the sky, the sea, and atmosphere, being highly transparent. Glass has unusual facilities for the attainment of this same quality. Whereas in oil, the opaque nature of the material used frequently causes the sky, in modern pictures, to be most offensive to those who visit our academies. Turner avoided it, so did Titian; indeed, all the greatest painters.

Before quitting the colour of blue, it is our duty to notice its moral significance, as the colour of modesty, retirement, and of a placid and meek spirit. Indeed, the whole system of Christian symbolism as connected with colours is one which wants further illustration. Although more may have been asserted than is capable of actual proof, there seems little doubt that in the earliest times that feeling which, in our childhood, we all remember, of favourite colours, had matured itself into a system. Lord Lindsay indeed asserts, that this took place before the confusion of tongues and the general dispersion. He offers no other proof, however, of this fact, which must be prior to all written records, than "the correspondence and agreements on this point between nations very widely apart from each other in race and residence." To the generality, however, it will appear, that the constitution of the mind of man is such, that we involuntarily associate certain ideas with certain colours, and that in the most natural manner. Nobody, for instance, would think that a lady dressed in red or yellow was desirous of avoiding observation. Blue, on the contrary, is associated with meekness and humility. It is therefore a beautiful symbolism which in art almost universally represents our Saviour as clad in the two colours, blue and red,—

"Celestial rosy red, love's proper hue,"

indicative of the ardour, courage, and devotion with which he set his face as a knife against the powers and principalities of this world, the rulers of spiritual darkness in high places; and blue clearly showing forth that benign and tranquil spirit which led him (when those who little understood the nature of his kingdom and office would have taken him away to make him a king) to retire, as Elijah did in former times, to the rocky fastness, or the mountain brook, or the shadow of the juniper-tree, spending days and nights in prayer to His Father and ours.

The Holy Virgin is generally clad in these same colours, but blue is more predominant. This is but right. Generosity, truth, fidelity, are all noted by it. Heaven is generally symbolized in ancient art by the segment of a circle, sometimes of pure blue, sometimes edged with the three colours of the rainbow. The universe by a globe or sphere, usually also of deep blue.

The pediment of the British Museum now has a blue background, which relieves the sculpture very nobly; and it is highly probable that blue was the background used at the Parthenon.

Among the painters, Titian is a notable instance of the forcible employment of blue. The Titian in the National Gallery, which goes by the name of "Perseus," is a good example. "Fra Beato Angelico" glories in the lustre of a serene blue. The picture in Lord Ward's collection is an excellent instance, where the brilliant robes of the saints in Paradise, and of the Saviour, contrast with the serene of the Heaven of Heavens. Raffaelle excelled in blue skies. The "St. Catherine" in the National Collection" may be cited in proof of this, though a picture generally of a low tone of colour. Paul Veronese is to be noted for his splendid blue backgrounds, usually placed behind a gay assembly of figures. The "Marriage of Cana," in the Louvre, is a case in point. Among the moderns, none is more successful in his application of a deep blue than Etty. His naiads and dancing nymphs are almost always given out in relief upon a preternaturally blue sky. As mere specimens of colour they are fine. Paul de la Roche has a deep blue background for his grand picture, the great Artists of the Revival, painted in the Ecole des Beaux Arts at Paris.

These are a few, a very few of the uses of the colour blue in Christian art. It is pleasing to find that nature, by a sort of foretaste of the Christian system, associated the same class of ideas we now do to this beautiful colour. Minerva was the "blue-eyed progeny of Jove." Her mantle was blue. In classical, as in Christian art, it was the colour of chastity and virginity. Artemis is even robed in blue and white. Isis, the Egyptian Diana, by one of those coincidences which it is difficult satisfactorily to account for, called "The Mother of the Child," is also robed in azure, while Poesy herself is clothed in a vesture of celestial blue.

One of the pleasures of that classical literature which it is perhaps too much the tone of the present age to decry, as having but slender practical uses, is, that it gives, not merely new thoughts, but a new colouring to old thoughts. Thus when we think of Thetis, the goddess, the blue, blue sea, mother of the warlike Achilles, and the line of Ovid,—

"Cæruleos habet unda deos,"

literally translated,—

"The waves have their gods of 'true blue,'" —

it is hardly possible that an Englishman's thoughts should not revert to our own true blue tars, and their mother, Britannia.

A few words now concerning the primary colour which is most nearly opposite to blue,—*yellow*,—and which in its nature, is most nearly allied to the neutral white, as blue is most opposite to it. Gold, as a natural substance, is that which may be taken as the most common and perfect type of the colour, yellow. As blue cannot be seen in full beauty, save in transparent media; so neither can yellow, save in opaque media. Metals, marbles, earths, and draperies, but specially the two former, are some of the substances which display the rich warmth of yellow to its greatest advantage. Then we find in the decoration of the tabernacle and temple, decorations which, it might be well to observe, would amply repay attentive study,—the colour yellow represented by large masses of the precious metals of gold and of brass. We have in the Tabernacle, a golden candlestick, a brazen altar, with all its paraphernalia of basins and flesh-hooks and fire-pans, doubtless, all specimens of workmanship and brazen pillars with their fastenings of silver and the planks which surrounded the holy enclosure, cased with plates of pure gold. This must have been very beautiful, especially if we consider it in juxta-position with the rich Oriental draperies of purple and scarlet, and fine needlework with which it was combined, the whole backed by the deep bright blue of an Oriental sky. In Solomon's Temple we again find a development of the same principle which prevailed in the structure of the Tabernacle in the Wilderness, extended, doubtless, with greater cost, both of time and materials, and fine work, but all upon the same type or pattern. This surely teaches us that there are such things as art principles, and that the Bible sanctions them.

We can conceive no form of beauty more majestic than that of the two cherubim overlaid with gold, which separated the holy place from the fore part of the oracle. Thus we read in 1 Kings vii. 27,—"And he set the cherubim within the inner house, and they stretched forth the wings of the cherubim, so that the wing of the one touched the one wall, and the wing of the other touched the other wall, and their wings touched one another in the midst of the house. And he overlaid the cherubim with gold."

Nothing can give a more sublime notion of the beauty of the sanctuary than these gorgeous winged figures with outspread wings guarding its entrance, and all worked and overlaid with gold. Indeed, the state of metal-work in a given country at a particular time, is no bad test of the state of art. Perfectly fine colour without metal-work it is hardly possible to find in internal decoration. Our ordinary practice

* Walpole tells us that Charles I. presented Mrs. Carlisle with 10*l.* worth of ultramarine, which lay in so small a space as only to cover the king's hand. Barrow says that Vandyke partook of the royal bounty.

of gilding bears testimony to this. Nothing certainly is more absurd, and yet the gross defects which gilding will neutralize bear testimony to the inherent value of this kind of ornament. Nothing can be worse, for example, heavier, or more inelegant in form, than many of the mouldings at the various houses of our nobility; but, nevertheless, the amount of gilding with which they are covered hides defects, and produces a gorgeous and striking whole. No great artists have been indifferent to the forms and characters of the gilded frames in which they are wont to put their pictures. As Marc Antonio was Raffaelle's engraver, Bramante was his frame-maker. Singularly enough, a kind of dictum has become prevalent among artists, which bears witness to the truth of the views here put forth with reference to the inherent beauty of that rich yellow, hardly surpassed by

"The yellow harvest's countless seed,"

which the colour of fine gold presents. It is acknowledged, I believe, that no setting is so favourable to any picture as a broad band—or flat, as the gilders term it—of pure gold. You will observe it invariably used within the frame by all good water-colour painters and miniature-painters.

Upon the same principle yellow is a good colour for certain draperies, inasmuch as it sets off and heightens the greys and blues of the landscape and the sky. For our dull climate it is a great advantage to bear this in mind. Indeed, for furniture generally, a golden yellow has a fine and gorgeous effect. The picture gallery at Apsley House, in the time of the late Duke of Wellington, was furnished with yellow damask. The richness of its effect was noticed by all. It is an admirable ground for all cool pictures, such as sea-pieces and English landscapes. Seguir, who was a good judge, recommended his Majesty George IV. to adopt this colour for his picture-gallery at Buckingham House. The Claudes in that collection were much heightened in effect by the yellow ground, when (as the greater portion are) they are cool in tone. The sunsets, however, lose by it.

Before quitting the colour "yellow," I wish to say a few words upon the early practice of golden backgrounds to paintings, which, beginning with Mosaic work, was transferred to oil, and which, having been entirely abandoned for a long series of years, has reappeared at Munich within the last twenty years as part of the characteristic style of the early Christian basilicas.

In Byzantine art there is one constant source of grandeur, one principal element of the sublime, which I think later schools have failed to reach. I mean the prominence given to our Lord, and a correct pictorial idea of his twofold nature. The writings of archæologists, even as eminent as Rio and Kugler, prove to me that the ideal of this school has been but imperfectly understood. For instance, in reference to this very question of golden background, Kugler roundly states that it is the nature of a sunken art to endeavour to make amends for its incapacity for all original composition by the splendour of its materials. It may be so: certainly the splendour of the materials used, so far from forming the whole, forms but a small portion of art. It is commonly said, that a bad workman complains of his tools: might it not be said with equal truth that you cannot execute the best work without the best tools? The mere notions of costliness and labour add to the value of a work of art,—Aristotle said that men liked flattering because it proved that the flatterers thought them worth a good deal of trouble. So, as long as human nature is what it is, men will delight in costliness and pains about things of God, because it proves that we conceive no toil too great, no trouble too severe, to enable us worthily to celebrate the honour of the Almighty.

Now, with regard to golden backgrounds,—they have advantages: their tone is uniform and even; they therefore do not take the eye from the principal objects. The metallic ground reflects far more light than oil paint can. There is a horny varnish which blends with the oil and destroys its purity: gold is free from this. It is not devoid of that prime element in all high art,—mystery. "Gold," says Pindar, "is a sparkling fire, which in the hours of night shineth forth with glory, and is in its nature above all other wealth which exalts mankind." The notion which these golden backgrounds give to my mind is that of the highly illuminated vault of Heaven. The idea of the clouds being golden is one which has, I suppose, accompanied most of us from our earliest years, and hence naturally the mere background of gold gives a great dignity to any pictorial representation. Surely it is no small proof of this that artists so skilful as those of Munich (Cornelius and others) should have adopted it.

These arguments in favour of gold backgrounds are enhanced if we allow the mind to dwell with contemplative satisfaction on the historical position of the Byzantine churches. "They are," says a modern writer, "the vestiges of an age singularly interesting to the Christian student, and are tinged as it were with the light of two suns; on the one side by the setting sun of an old world, and on the other by the earliest gleams of a new day dawning on a new people and a new life."*

THE ATMOSPHERE AND DISEASE.

THE OZONE THEORIES.

On several occasions within the last few years, we have incidentally alluded to a theory of the cause of cholera, ascribed to Liebig, the chemist. If we rightly understand that theory, cholera is attributable to a *deficiency*, in the atmosphere, of an active form of oxygen, called ozone, and once believed to consist in a combination of hydrogen with oxygen. This ozone was regarded as a sort of scavenging, cleansing principle, by means of which all decomposing animal and vegetable substances, and noxious gases emanating from them, and pervading sewers and drains, &c. were rapidly consumed or destroyed. In seasons when ozone is deficient, therefore, the usual scavenging process is supposed, on this theory, to be suspended or imperfectly effected, so that the atmosphere is left loaded with poisonous gases, which produce deadly fevers, and in the worst of such seasons even cholera. Now, the idea seems exceedingly feasible; but what shall we say of another theory, adopted, it is said, by Schönbein, the discoverer of ozone itself, so far as regards epidemics in general, and according to which, as we now hear, this salutary scavenger is itself regarded as the very cause which produces epidemic cholera! On this new theory, which is advocated by Mr. Mayhew, a chemist, and brother to the able writer of that name, it is asserted as a fact, that ozone is superabundant, or in *excessive* quantity, in cholera seasons. If that be really the fact, of itself it upsets the theory of Liebig, as we have heretofore understood that theory, for then it is that noxious vapours ought to be most thoroughly neutralized and destroyed. There can surely be no difficulty in the ascertainment of such a fact. There are other hitches in the new theory, however, besides the counter theory attributed to Liebig. Mr. Mayhew still regards ozone as a compound of hydrogen and oxygen, whereas we have always understood it to have been of late regarded as a mere allotropic, or new and *highly active* form of oxygen itself, a form which is readily induced by electrical action, and which probably consists in oxygen *excited* by electricity, as it forms an excellent bleaching agent which abounds in the atmosphere in or after thunderstorms.† In this idea of ozone, we are borne out by Brande, in the volume we have elsewhere noticed, where, referring to it as a bleacher, he says,—

"It is time to speak of '*ozone*,' or *allotropic* or 'other' condition of *oxygen*. I believe the illustrious discoverer of this agent would not now object to my speaking thus distinctly in identifying ozone with oxygen in an allotropic state. For a considerable period there existed a doubt as relates to this point. When M. Schönbein first determined the existence of ozone, he imagined it to be a new oxide of hydrogen, but I think I shall not err in stating that he now considers it to be oxygen in an allotropic state."

Notwithstanding this difference of opinion, however, on the nature of ozone, so far as regards Mr. Mayhew, we do not see that it is fatal to his theory. Holding it to consist of a deutoxide of hydrogen, he considers it a producer of cramps and other choleraic symptoms when drawn into the lungs, and his object, therefore, is to "deprive it of its oxygen," whether in the atmosphere or in the blood. Now, agents tending to deprive such a deutoxide of hydrogen of its excess of oxygen, would be likely to be those also very well adapted to neutralize it even though it be only oxygen *per se* in a state of abnormal and unwholesome excitement. It is a singular circumstance, therefore, that the agent which Mr. Mayhew recommends as preeminently the anti-choleraic weapon, is precisely that which we have of late years pointed attention to, as not only strongly recommended by Professor Graham as a disinfectant in typhoid fevers, but as having been for many years used under quarantine regulations by the Government as a fumigator in plague, namely, sulphurous acid, or the fumes of burning sulphur. Mr Mayhew states that "if an atmosphere of sulphurous acid gas be maintained in the chamber, and the diluted acid be administered internally, the *patient must recover*;" and he gives cases in which he has succeeded without any difficulty, and with great rapidity, in effecting cures. "I myself," he adds, "have used the sulphur vapour in two or three cases of incipient cholera, and the result has been truly marvellous. A lady who was seized with cramps and violent vomiting was placed in a room where an atmosphere of sulphurous acid gas was judiciously maintained. In ten minutes all pain had left her, the sickness had ceased, and she felt in perfect health. A lad was seized with purging, cramps, and vomiting: I made him go to bed, and burned sulphur in his room, until the air was strongly impregnated with the gas. In half-an-hour the lad had fallen asleep, and the next morning he awoke perfectly restored."

In India, it appears, sulphur has been used with undoubted success. In China, where sulphur is daily burnt in the shape of gunpowder in fireworks, cholera is said to be unknown. A slaveowner is said to have fumigated his negroes with burning sulphur, and thus warded off cholera, while, in neighbouring plantations, they were "dying off like flies." We ourselves, as lately stated, have found that sulphur relieved premonitory cramps. It is sulphurous acid, however, that Mr. Mayhew speaks of as of internal use, and burning sulphur (its equivalent), as we have also repeatedly advised, externally.

In the present perplexity and utter paralysis of medical skill, we regard it as the duty of every public writer to aid as far as he can in clearing up this terrible mystery; and as we do think that the probable cause of cholera may be found to rest somewhere between these two theories, the public attention cannot be too strongly, too earnestly, or too promptly concentrated on the subject of ozone and its modes of operation. There is one point which appears to us to militate very strongly in favour of the idea that ozone, if it be, as now appears, mere abnormally inflamed and ultra-active oxygen, is the great dread cause of cholera. Oxygen, it may be recollected, was by us, in a recent article, pointed to as not only the agent by means of which the blood was supplied with vital energy, but by means of which the organism was supplied with *concentrative* vigour: in other words, we expressed it as our conviction that the peculiar nature of the vital energy which it does contribute *to the blood, the muscles*, and the brain, is concentrative,—consolidative and fibrinous, so far as regards the blood and tissues,—contractile and bracing, so far as regards the muscular system,—and concentrative or consociative so far as regards the nervous centre and its tissues. Now it is an awful fact that the malignant energies at work in the organism during cholera

* To be continued.

† Is there not something remarkable in the want of usual thunderstorms, this season, at least, in the metropolitan districts? Can it be that the oxygen of the atmosphere, therefore, remains unduly charged with electric force (with positive electricity, we should suspect) precisely on this account that there have been so few thunder-storms "to clear the air" of this surcharge of noxious electricity, or to discharge and neutralize it? Yet this would scarcely be consistent with the alleged abundance of ozone *after* thunderstorms. Should it be as suggested, however, could not local measures be taken to counteract if not discharge the noxious (positive?) electricity, at least to some extent? Might not patients, for instance, be negatively electrified, if the positive, as we suspect, be the malign influence?

are decidedly and peculiarly concentrative. The muscular system is cramped; and what is cramp but a tremendous and abnormal excess of *contractile* force involuntarily overpowering the normal and neutral state of relaxation in the muscles? The very blood is *consolidated* into *fibrinous* plugs in the vessels and the heart itself, which they thus fill up, while the serous solvent of this now precipitated fibrine deluges the bowels! All this while the brain and the mind preside over the terrible cataclysm in clear cool *concentrated* and *collected* vigour which intensifies the horror of the contemplation. Everything, as we have said, denotes the overpowering predominance of *concentrative* energies abnormally active; and since oxygen in its normal state contributes such energies in normal degree to the blood and the whole system, it is reasonable to suppose that oxygen in its abnormal state of activity must contribute such energies in abnormal and destructive excess, unless promptly neutralised, either internally or externally, or both.*

Meantime, and whatever truth or error may pervade such reasoning, and strange as this new association of *sulphur* with this dread and destroying "prince of the power of the air" may seem, we again most earnestly advise the daily fumigation of every dwelling and its precincts with burning sulphur in every district or vicinity attacked, or in dread of being attacked, by cholera. Let clouds of such sanitary incense, as we have said, ascend, even morning, noon, and night. The influence, apart from all such reasoning, is *known* to be most wholesome, and has long been used, as we have said, in plague. On either of the theories referred to it must be highly beneficial. In the one case the sulphurous fumes will dehydridize the venomous gases which the *deficient* ozone leaves undecomposed. In the other, these fumes will neutralize and *kill* the excessive and virulent ozone, if in virulent excess it really be. It will be a substitute, if not an ally to ozone, if ozone be deficient. It will be an enemy to it, and its destroyer, if it be present in excess, while at same time itself neutralizing other noxious gases. The very confidence this practice would insure is an "armour of faith," which is highly sanative; for fear itself predisposes to such symptoms as those of cholera, since fear or horror is an abnormal *concentrative* state of action in the brain and mind which reacts abnormally on the body towards the production of these very symptoms, as the phrases—"freezing of the blood," "standing of the hair on end," and "paralyzing" and "rooting" of the limbs to the earth, under the influence of fear or horror, highly figurative though some of these phrases be, but too clearly indicate.

The disease is happily abating, and we must strive to put things in such order as to ward off similar sad visitations.

* Another point of scarcely less importance apparently in favour of the same view, relates to the singular association of great pestilence and great fires, to which we more particularly allude in another article in our present impression, namely, that on the late spontaneous outbreak of fire in Gloucester Cathedral, to which we may here refer.

THE WILTS ARCHÆOLOGICAL SOCIETY.

THE first annual meeting of this society, held in the ancient town of Salisbury, has passed off very successfully. The Bishop, the Marquis of Lansdowne, the Right Hon. Sidney Herbert, Mr. Poulett Scrope, M.P. the Mayor of Salisbury, Mr. Britton, and others, have taken active part. Mr. Sidney Herbert, as President, made a pleasant address on Wednesday, the 13th, in the course of which he alluded to the desirability of setting up some of the fallen stones at Stonehenge, if they would not have the prime features of the temple lost. We commend this to the society for their early attention. A report from the Rev. Mr. Lukis showed that the members of the society are now 281 in number. After a speech from the Bishop, the following gentlemen were elected honorary members:—The Rev. Joseph Hunter, F.S.A.; Mr. J. Y. Akerman (Sec. Soc. of Antiq.); Mr. E. W. Brayley, F.S.A.; Mr. Albert Way, F.S.A.; Mr. C. Roach Smith, F.S.A.; Mr. T. Wright, F.S.A.; Mr. George Godwin, F.R.S.; Mr. Wm. Yarrell, F.G.S. and F.Z.S.; Professor Owen, F.R.S.; Mr. Thos. Bell, F.R.S. President of the Linnean Society.

The Rev. W. C. Lukis then read a paper on church bells, to which we shall return. At the dinner, the Mayor presided, and some good speeches were delivered. At the evening meeting the Rev. Mr. Jackson read a paper on two chantry chapels founded by the Hungerford family, in Salisbury Cathedral, of which we must give a portion, namely, his account of—

The Iron Chapel.

This chapel, on which, from its peculiarity of material and appearance, Salisbury has bestowed the name of "The Cage," is 20 feet long, 8 feet 1 inch in breadth. Each side is composed of fifty-eight upright bars of iron, an inch and a half square: each end has fifteen bars, all strengthened by two horizontal rails: they were formerly painted in blue, gold, and green. The rails rise upon a stone basement, divided into three compartments, as are the rails above. In the several panels are coats of arms, within garters; in the centre, that of Lord Hungerford, the founder, quartering Heytesbury and Hussey; in the corners of the panel, knots of three sickles; in the eastern compartment, Hungerford and Katherine Peverell, his first wife; in the western, his coat impaling Eleanor Berkeley, the second wife; in the corners, single sickles. On the cornice, and on the Gothic ornament over it, are many other shields. The inside of the roof was painted with scrolls and Latin inscriptions. By the original deed, dated 1429, twenty years before his death, Lord Hungerford obtained leave, from the Dean and Chapter, to enclose, at his own expense, a space exactly corresponding with the dimensions of this chapel, between the first arch, to the arch where the altar of early mass was celebrated, to erect there an altar in honour of the Blessed Virgin Mary, and to make a place for his own burial.

There is still, upon the floor of the cathedral, under the arch, in the nave, where the iron chapel originally stood, a low broad monument of Purbeck marble, on which are the brassless effigies of the founder and his wife, Katherine Peverell; with many sockets of their favourite device, the sickle, and other arms, all now destroyed. Their remains were removed with the chapel in 1779, to its present site, as appears by an inscription.

The iron chapel is in very good preservation, owing to the interference of the late Lord Radnor, who considered himself sufficiently descended from the Hungerfords to be at much pains and expense to restore it. In a private journal of the year 1784, written by a Wiltshire gentleman, it is said that his lordship was two years in settling the heraldic ornaments now painted upon it.

On the second day, Wilton Abbey was visited. The church there was, of course, examined, and Mr. James Nightingale read a paper, elucidating Byzantine architecture, which we should give in full, but that our readers have lately had several essays on the subject. We shall confine ourselves to the closing portion of it which treated of

The Mosaics in Wilton Church.

The Wilton mosaics have a considerable interest from their date and history being known. They originally formed part of a shrine set up in 1256, in the Church of Santa Maria Maggiore at Rome. In the course of some alterations made there during the last century, they were purchased and sent to this country by Sir W. Hamilton, and remained at Strawberry-hill till Walpole's collection was dispersed, a few years since.

There exist also in Westminster Abbey some mutilated remains of a similar date and character, in the shrine of Edward the Confessor, finished in 1270, and in the tomb of Henry III. who died in 1272. Walpole supposes that these latter works in Westminster Abbey, and possibly the mosaics now at Wilton, were made by Pietro Cavallini, the well-known mosaicist and painter, and pupil of Giotto: this, however, could not have been the case, as Cavallini was not born till 1259. The very interesting but dilapidated relics still in Westminster Abbey were in all probability made by Italian artists.

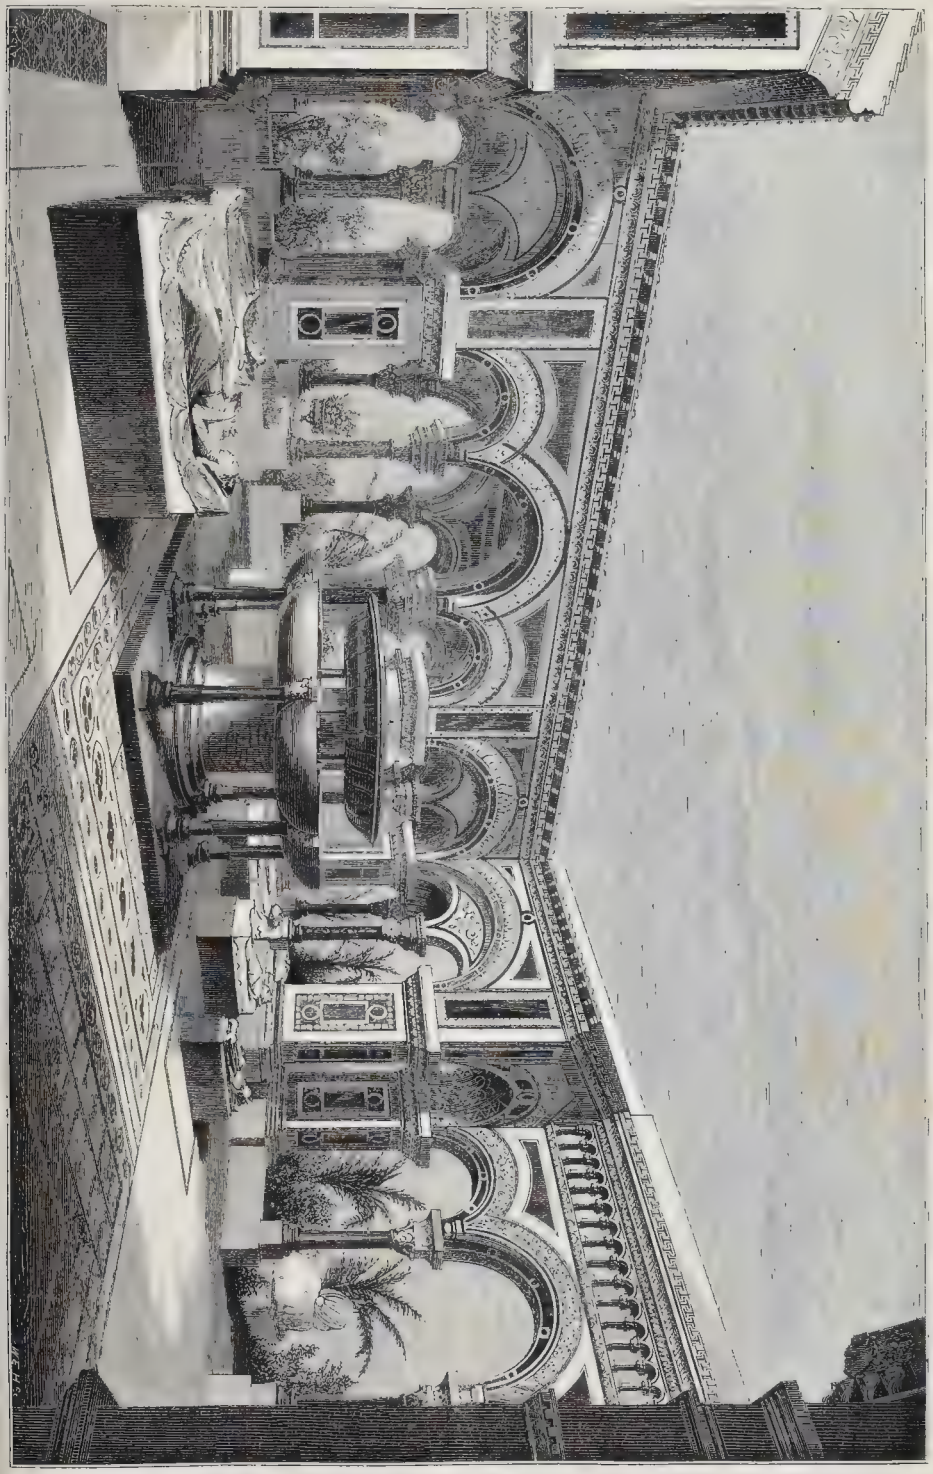
There is still another kind of mosaic of great antiquity—the Opus Alexandrinum, ordinarily used for the pavement of churches, and composed solely of the three materials—porphyry, serpentine, and white or slightly coloured marble: these are embedded in grooves cut in marble slabs, allowing a white line to develope the geometrical base of the pattern.

A small but perfect example will be found in Wilton Church of the Opus Alexandrinum: it has been laid down in the pavement of the entrance porch, and was brought from Italy.

A large piece of this kind of mosaic, but of modern Italian manufacture, will be found in the pavement at the foot of the steps of the chancel, between the pulpit and the reading-desk.

The use of mosaic is unquestionably one of the most beautiful as well as the most enduring modes of church decoration: the variety of composition is endless, from the simple square and circle to the most intricate labyrinth of interlaced work: they display almost every variety and combination of colour, from the most retiring drab or grey to the gorgeous splendour of gold and purple.

Some very interesting glass of several different periods will be found in Wilton Church. The windows of the central apse are mostly fitted with glass of the thirteenth century: in the smaller apses are some curious pieces of the Decorated and later periods: several whole-length figures are remarkable for their good drawing and brilliancy of colour. In the side aisle window nearest the campanile, are arranged two portions of earlier windows of good Cinquecento work.



A conversazione at the Bishop's Palace closed the day, where Mr. Clutton, to whom has been confided the restoration of the Chapter-house as a tribute to the memory of the late bishop, read a paper on "The Origin and Uses of Chapter-houses." The sum required for the restoration is 5,000*l.*: 4,400*l.* have already been raised. At the closing meeting on Saturday special acknowledgement was made of the exertions of Mr. Cunnington in the formation of the society; and Mr. John Gough Nichols read "Some Notices of the Library at Stourhead."

THE BYZANTINE COURT IN THE CRYSTAL PALACE, SYDENHAM.

WE have already spoken of Byzantine architecture in connection with the Crystal Palace at Sydenham (page, 353 *ante*), and described the principal specimens there collected in illustration of it.

We now give a view of the Court specially appropriated to it, as seen looking towards the nave and transept, with the fountain from Heisterbach, on the Rhine, attributed to the thirteenth century, and the effigies of Henry II. Richard I. John "Lackland," Queen Berengaria, and others at the sides. The arcade next the nave is from the Church of St. Mary in the Capital, at Cologne, one of the most interesting structures in what has been justly called the Rome of this side the Alps. The arcade probably belongs to the tenth century. The marblings and general decoration of this side of the Court are very creditable to Mr. Beensen, by whom they were executed. The ceiling of the cloister is an admirable piece of coloured decoration. The Shobden doors, the Kilpeck doors, the mosaics from St. John Lateran, at Rome, and the bronze doors from Hildesheim and Augsburg, are against the sides opposite to those shown in the view. The bronze doors, both of the eleventh century, are particularly interesting. In passing round, notice the elegance of the ornament in the abacus of the capitals of the Shobden chancel arch, and some of the foliage in the Prior's doorway, from Ely, thoroughly Greek in derivation.

The whole of this Court will repay the most careful study; but it is a source of mystification to many, who are unable to bring under one heading the works of various dates, characters, and countries which it includes. Some intelligent guides, not to say lecturers, are greatly needed in the Crystal Palace. At the present moment, it is scarcely possible to find any one to whom the simplest question can be addressed. If we had not been told differently, we should have imagined that the whole board of directors, including the secretary, went out of town the week after the opening, and had never been heard of since.

THE PAINTING OF THE CRYSTAL PALACE SYDENHAM

MASTERS AND WORKMEN.

THE FIRE AT MR. CUBITT'S.

We have already mentioned that at the time of the late disastrous fire on Mr. Cubitt's premises at Millbank, there were 609 men at work in the several shops. The day following a partial suspension took place, but on the next day temporary accommodation was made for those whose shops had been destroyed, and nearly all were set to work again, or at least to the number of 564. On the following Monday the numbers were increased to 656, and there are now employed on the premises and in their restoration upwards of 700 men.

Our object in referring again to this fact is to mention that on the day after the fire Mr. Cubitt gave to every joiner who had lost tools a sum of money that they might purchase some new ones for his immediate use. In the following week their own estimates were received of their several losses, and each man was paid to the amount of 14s. in the pound on the Saturday, from the sum of 605*l.* subscribed by Mr. Cubitt and his family. In consequence of this liberality the joiners in his employ at the time of the fire presented their employer last week with a written testimonial of their gratitude.

The memorial says that,—"Remembering how great a sufferer he himself has been from this misfortune, they cannot but feel that he has in this present instance offered a still greater manifestation of his generous spirit towards his workmen in addition to the many former proofs he has given them of that benevolence which has characterised the whole course of his life;" and it closes with the expression of a hope that "none of them will ever be found wanting in the faithful and zealous discharge of their duty towards him."

In addition to the sum of 14s. paid to the men on their losses, there has been a further payment of 2s. in the pound to each man out of a subscription forwarded by friends of Mr. Cubitt, chiefly residing on the Belgrave estate, and in whose houses the men are occasionally employed, and there is still a small sum in hand for further distribution.

PROVINCIAL NEWS.

Lynn.—Mr. Stimpson, of Lynn, builder, has obtained the contract for fitting up the Stanley Library, in the Athenæum of this town.

Norwich.—The first stone of the new free public library was laid on Wednesday in last week by the mayor, Sir Samuel Bignold, in the presence of a numerous and distinguished company. A description of the new building has already appeared in the *Builder*. The proceedings were of the usual character. Hopeful and suggestive addresses were delivered by the amateur artificer of the day, and by Mr. Peto, M.P. the Rev. E. Sidney, Sir Fitzroy Kelly, M.P. *cum quibusdam aliis*.

Worstead.—The national school-room in this village has been enlarged from designs by Mr. Phipson, of Ipswich. The building, which is in the Elizabethan style, presents no very noticeable features.

Roxwell.—The church here has been repaired and reopened; the shingle steeple new painted; the old flint facing restored, with quoins and windows (after the model of the old ones) of Bath stone. A new aisle has been added on the north side, and a vestry looking east. The old oak roof, which was ceiled up, has been opened, the tiles new laid, and coping added at the gables; the last gables of nave and chancel being decorated with floriated crosses. The interior has been fitted with open seats of stained deal, and Staffordshire tiles; the chancel, with oak longitudinal seats and Minton's encaustic tiles. Mr. C. Ainslie, of London, was the architect; Mr. R. Dowsett, builder; W. Day, foreman; Cundy (in part) and Hardy, Chelmsford, stonemasons; Abrahams, stainer; tracery of oak sittings carved by Dowsett's carpenters. The work has been fourteen months in hand. The body of the old church would not accommodate more than 200, but by the alterations made seats have been secured for 400. The churchyard has also been improved, the soil being levelled and an addition made to the ground of 67 perches. The whole expense of these works amounts to about 1,800*l.* for the general body of the church, and 300*l.* for the chancel. There remain 200*l.* unprovided for.

Berkhampstead.—The following tenders have been made for Bourne's Schools, about to be built here:—

Hawke	£973	0	0
Burge	940	0	0
Hawkins	750	0	0
Harris (deducting allowance for old materials)	688	10	0
Matthews (deducting allowance for old materials)	687	0	0

Mr. Joseph Clarke is the architect.

Loughborough.—The tenders for the building of the town-hall here have been examined by the committee, who have resolved that Mr. Dennet's tender (of Nottingham), for 3,993*l.* be accepted. There were eleven competitors—the highest being 5,500*l.* It is expected that the work will be proceeded with immediately.

Leicester.—The consecration of St. John's Church, Leicester, took place on Wednesday before last. The building, which is cruciform in plan, consists of chancel and aisles, transepts, nave and aisles, and tower and spire, the ground floor of the tower forming the north transept. The plan of the chancel is octagonal at the east end *in formâ apsidis*, and, besides the aisles, has a vestry attached to it on the south side: there is also a north porch. The material selected for the outer walling is Mountsorrel granite. The west end consists of a moulded doorway, over which is an arcade of five divisions, three of which are pierced for windows, and a rose window with geometrical tracery in the gable, flanked on either side by the western windows of the aisles. The nave roof is of higher pitch than that of the aisles. The ceiling of the chancel is formed of ribs of deal and deal boarding. The ceilings of the other portions are plaster, pane drawn between the common rafters, and a fresco pattern in red runs along each pane. Nave is 84 feet long by 27 feet 6 inches wide; aisles, 63 feet long by 12 feet three inches wide; chancel, 37 feet long by 21 feet 6 inches wide; transepts (from north to south), 70 feet long by 18 feet 6 inches wide; two chapels, 16 feet by 18 feet each. The church will accommodate 700 adults and 300 children. About one half of the sittings will be free. The architect is Mr. Scott. The builders are Messrs. Broadbent and Hawley, of Leicester; and the clerk of the works, Mr. G. Clark. The building was commenced about eighteen months since.

Swindon.—A sale of landed property at the Swindon station last week was attended by a large and respectable company. A higher price was obtained for the Broad-town estate than has been known for many years, being more than thirty-six years' purchase on the present rental. The Bupton estate was, after a sharp competition, bought in at the reserved price: the biddings, however, nearly reached that amount.

Little Bedwyn.—The foundation-stone of the long-promised school buildings, says the *Wilts Mirror*, has just been laid. The edifice is intended to comprise two large and convenient school-rooms, one for girls, and another for boys, with a gallery for infants, and a master's residence. The funds for its erection are provided by the Marquis of Ailesbury, Earl Bruce, and Sir W. Curtis, Bart. assisted by grants from the National Society and the Committee of Council on Education. The children of Froxfield are also to be admitted to these schools. Mr. Major, of Swindon, is the builder.

Marlborough.—Great preparations have been made, says the same paper, for the long looked for Industrial Exhibition. It is now open. Among the promised attractions, "a magnificent picture in needlework, exhibited by Lady Williams," is alluded to.

Weymouth.—Messrs. Goodyear and Son, of Stonehouse, Plymouth, have taken the contract for erecting the market-house here, being the lowest of the tenders, which were as follow: Mr. Crickmay 3,471*l.*; Messrs. Reynolds and Son, 3,589*l.*; Messrs. Goodyear and Son, 3,424*l.*; Mr. Seaman, 3,815*l.*

Bristol.—The Rev. Robert Miles, rector of Bingham, in Nottinghamshire, and son of the late Mr. Philip J. Miles, of Leigh-court, has purchased ground adjoining the city gaol, and formerly the property of the Fowler family, for the purpose of erecting thereon a spacious church, for mariners frequenting the port of Bristol; an almshouse for six or eight sailors' widows; and a suitable residence for the clergyman of the intended new church. The whole, the purchase of the land, the erection of the church, almshouse, &c. as well as the endowment of both, are, it is said, to be at the private cost of Mr. Miles.

Felton.—The newly-erected parish church of Felton, near Bromyard, was opened on Tuesday week by the Bishop of Hereford. The new church is erected upon the site of the old one, and consists of a nave, chancel, porch, tower, and vestry, in the Decorated style of English architecture. The south windows of chancel are filled with painted glass, illustrating Scriptural incidents; and the west window is filled with Powell's quarries. The roofs are exposed to view, and the seats open. The chancel has a stall on either side. The reading-desk is of open tracery, and the pulpit and font are of Bath stone. The aisles are paved with Godwin's encaustic tiles in ornamental patterns. A peal of bells by Mears is fitted up in the tower, and is hung upon a new principle, by which chimes can be rung by one person. The building was designed by and carried out under the superintendence of Mr. T. Nicholson, of Hereford, architect to the Diocesan Church Building Board.

Bangor.—The new church committee have invited plans from several architects named. A confident hope was expressed that the necessary fund would be raised, and that the building operations would shortly commence.

Chipping-Norton.—A new "British" school has been erected in New-street, containing a large school-room, with class-room opening out of it, on each of two floors, and capable of affording ample accommodation for 250 children. The rooms for boys and girls are entered at different ends of the building. A master's residence is also attached as a wing to the building. The schools were to be opened on Friday. The cost of the building, including site, will approach 900*l.* a considerable portion of which has been subscribed.

Stafford.—At a vestry meeting of the united parishes of St. Mary and St. Chad, held in the Guildhall last week, to obtain an additional grant of 500*l.* to 2,500*l.* granted at the previous vestry meeting for a new cemetery, it was stated that it had been thought a piece of land in the Stone-road would have been eligible, but on digging to the depth of 6 feet it was found to be wet, and the Board had selected a piece of land on the Eccleshall-road, for which 250*l.* an acre was asked. Four acres were required, which would be for land 1,000*l.*: the chapels and lodge were estimated to cost 880*l.*; boundary walls, 760*l.* The walls would be built 8 feet high from the surface. The conveyance and various expenses would be, perhaps, 50*l.*; and for laying out the land and sundry expenses, they allowed 100*l.* making a total of 2,790*l.* The motion for a sum not exceeding 3,000*l.* for a new cemetery was ultimately agreed to by a majority of 17 votes against nine.

Wolverhampton.—The restoration of the Collegiate Church, according to the local *Chronicle*, is making considerable progress. The central portion of the west end has been almost entirely reconstructed; and the window and doorway have been reinstated according to their original structure. The window will be filled with stained glass, as a memorial to the late Duke of Wellington, if the necessary funds can be obtained. The clerestory has been entirely rebuilt, and ornamented with pinnacles. The temporary roof, which had been erected over the interior of the nave, has been removed, exhibiting to view the carved oak roof. Progress in the remaining portion of the restoration is being made by the contractors, Messrs. Higham, of this town, builders.

Liverpool.—The new schools in connection with St. Mark's Church, the foundation-stone of which was lately laid, will be constructed of gray brick, with quoins, dressings, and wrought stone work of the local red sandstone. The architect for the edifices is Mr. T. D. Barry. The contract for the building has been taken by Mr. Thomas Hughes, and the cost is estimated

at 2,200*l.* We shall give a view.——The proposition made by the dock committee for the extension and improvement of the docks, at an expenditure of three and a half millions, was fully discussed at a meeting of council on Wednesday in last week. The principle of the scheme was adopted, and the necessary powers were granted for proceeding to Parliament to obtain an Act to enable the dock committee to carry out the plans, which, as time advances, will have to be discussed and approved of in detail.

Wallasey.—The Wallasey Board of Health lately resolved to advertise for the best plan to drain and sewer the district,—a premium of 160*l.* to be given for the best, and 50*l.* for the second best plan.

Levenshulme.—The new building for the Mechanics' Institution in this village, has now been completed, and was formally opened on Saturday week by a *soirée*, under the presidency of Mr. James Sidebottom, who has taken great interest in the success of the undertaking. The entire cost of the premises, including master's house, school apparatus, furniture, &c. is little over 1,000*l.* towards which sum 530*l.* 12s. have been received, and about 80*l.* promised. In addition to this 150*l.* will be received from private friends in connection with the old institutions, leaving a deficiency of 300*l.* On the ground-floor of the building are day and evening schools capable of holding 250 children. On the same floor are a reading-room and a room for library, which now contains 600 volumes. It is intended to use this large room for lectures on literary and scientific subjects, miscellaneous concerts, singing, and other classes. Messrs. Davison and Son, builders, have completed the work. Mr. Alfred Fisher, architect, gratuitously furnished the plans. The number of members now in connection with the institution is eighty-four; honorary members, ten.

Maryport.—Mr. Nelson, of Carlisle, according to the local *Journal*, has been engaged as the contractor for the new wet dock here. The extent of dock will be three acres, and the present one will form an entrance or dock basin. The coffer-dam and excavations are to be completed by January, 1856. The dock gates and walls or wings will form a separate contract. The deepening of the harbour and channel is carried on under the trustees.

Newcastle.—The contracts for the extensive buildings to be erected in St. Nicholas-square, Newcastle, says the *Gateshead Observer*, were let by the Town Improvement Committee of the Corporation, on Wednesday, to Mr. Robert Robson, of Wide-open, for the sum of 16,944*l.*

REOPENING OF SHOTTESBROOKE CHURCH.

SOME of our readers are doubtless already acquainted with the ancient church of St John the Baptist at Shottesbrooke, Berks, whose tapering spire, 150 feet in height, has awakened the attention of many a passer-by, as well as called forth the admiration of ecclesiologists in general. It was originally attached to an adjoining monastery, and dates from the year 1337, though there was previously on the same spot an edifice of Norman work, mentioned in "Doomsday Book." Sir William Tressell, of Cubblesdon, in Staffordshire, was the founder of the present structure, and within are still to be seen the elaborately-carved tombs in which repose his remains and those of his lady. The plan of the building is a Latin cross, the length of which is 80 feet, and the width of the transepts about 50 feet.

Till a year ago the interior was in a most deplorable condition; and much as it still contained to delight the antiquary and to afford food for the suppositions of the seeker after hidden things, the general effect of the white-washed walls, galleried transepts, high-built pews, and above all, the total absence of appropriate arrangement within the chancel, gave ample room for a return to better order and more church-like feeling. Since then something has been done. A chancel-screen of Painswick stone, the proportions of which were regulated by the traces of the earlier one, has been put up, and stalls which are terminated with carved poppy-heads.

The pulpit, on the south side, is of alabaster, inlaid with pieces of variously-coloured Derbyshire marble. The altar-rail is of light ironwork, as are also the gates of the screen. These are all the work of Mr. Wyatt, of Oxford. The seats, both in nave and transepts, face the east. Only a few detached pieces of the old stained glass remain, and it is much to be wished that the subscription now begun for a painted east window may be speedily filled up. Mr. Street was the architect.

There are in the north transept some old brasses in very good condition: here also rest the remains of the learned Henry Dodwell. The little village of Shottesbrooke lies about four miles from either Twyford or Maidenhead station; and a visit to this interesting church would well repay the traveller by Great Western Railway for the few hours that the digression would cost him. The present rector is the Rev. Charles Vansittart.

COSTS OF BRICKMAKING.

THE statement of "A Surveyor" (p. 467, *ante*), has brought us a dozen letters from brickmakers, denying that bricks can be made for the price therein given. "A Surveyor" simply stated what others had said on oath: the correctness or otherwise of the information rests with the witnesses. The following will represent the opinions of the dissentients:—

In reply to the letter of 'A Surveyor,' and in justice to the brickmaking trade, I trust you will oblige me by the insertion of the following detailed account of the average cost of making bricks in the ordinary way. Some of the items I know are much below the average of the last three years. For instance, last season and the preceding one, few brickmakers were able to purchase ashes at less than 10s. per chaldron, delivered in the field, and many large makers were compelled to give as much as from 12s. to 14s. and even 16s. The expense of measuring, sifting, and waste adds at least 1s. per chaldron to the cost, and as a chaldron of ashes in breeze and soil is required in making two thousand bricks, 6s. would no doubt be a much nearer estimate. It is rather singular the witnesses should say that 300*l.* are sufficient capital for making a million of bricks, when, according to their own showing, at 15s. 6d. per thousand, including royalty, nearly 800*l.* are necessary for the purpose. Brickmaking is over, and consequently the brickmaker's capital all expended, about the end of August, or nearly a year from the time he commences, by which time, and seldom before, he begins to have a return; so that at the lowest estimate 800*l.* are barely sufficient to make the quantity mentioned, to say nothing of keeping stock over a year, or even two years, in times of depression, in the building trade:—

	Per Thousand.		
Rent of field	£0	0	3
Ashes	0	4	6
Removing top mould	0	0	2
Digging earth	0	0	6
Soiling and turning earth	0	0	6
Chalk, and expense of washing	0	0	3
Moulding	0	4	4
Horse grinding earth	0	0	6
Sand	0	0	6
Straw and hurdles	0	0	4
Setting	0	1	8
Bolting, sorting, &c.	0	0	6
Loading	0	0	6
Implements, tools, &c.	0	0	6
Superintendence	0	0	9
Interest on capital	0	0	9
Royalty	0	2	0
Bad debts	0	1	0
Preparing hacks, obtaining water, making roads, coals and wood in burning, and materials for building sand-houses, &c. &c	0	0	6
	£1	0	0

You will perceive the above estimate is for the cost of making *bricks*, the brickmaker being entirely dependent on the weather for the proportion of good stocks or shuffs and rubbish he will get from his clamps. A course or two at the top, bottom, and sides, are invariably place, and sold at from 15s. to 20s. per thousand. Many of the bulk are likewise unavoidably grizzles and rough bricks, which sell for about 4s. more than place. A brickmaker, too, considers himself fortunate indeed, if he have less than two courses of shuffs at the top of the clamp, the price of which is from 8s. to 10s. per thousand. An ordinary clamp is about thirty courses high, and the last two seasons I have known that many, and heard that most brickmakers near London have had from four to eight courses of shuffs on the clamps, occasioned by the wet weather. Taking into consideration the extraordinary fluctuating character of the brickmaking trade, and its dependence on the weather, I do not believe that good stocks can be sold at less than 28s. per thousand to yield a profit of 20 per cent. which a manufacturer is fully entitled to, who only turns his capital once a year. B. L. Jun.

VENTILATION OF SEWERS.

OUR LAMP-POSTS.

COMPLAINTS of the gully-hole emanations are now general; and though I should be sorry to defend the barbarous practice of ventilating the sewers through slits in the streets or through the gully-holes, yet there is one view of the subject which has escaped the notice of the public, though, of course, scientific men are aware of it. It is this:—If the foul air cannot get away through these street openings, it will make its way through the house-drains into the interior of houses, and woe be to the tenant whose drain is untrapped. The flap-traps are never air-tight: even the syphon-traps are frequently inefficient.

In a county town a few years ago, the borough surveyor was afflicted with a vehement spasm of gully-trapping. There was immediately a rapid increase of disease, and in the higher parts of the town, clearly attributable to the fact of the foul air entering the houses through the untrapped drains.

What are we to do between the two fires? At any rate, the liberty of the subject should be so far trespassed upon as to make it compulsory on the landlords to have the house-drains trapped, whether they like it or not. Next, if by some means the sewers could be relieved of the air-pressure inside tending outwards, we should get rid of the discharge through the outlets in the streets.

I would suggest that the Commissioners might make an experiment to ascertain if this could not be done by means of chimney-shafts divided from top to bottom into two unequal flues. It would not cost much to make the experiment on a small scale first. The difference in area making a difference in the friction of the two columns of air, up and down, would create a draft of some power; of what amount that power would be, to be ascertained by the experiment. The draft might be slow, but it would be continual, requiring no fuel, and no attending to. From this might approximately be determined the number of ventilating-shafts for a given district.

Passing to another subject, I notice your remarks upon the lamp-post, or rather post for a lamp, opposite the Horse-guards: let me draw your attention to an abortion of the public-house or gin-palace description in a lamp-post near Vauxhall-bridge. B. R. A.

ELY BURIAL CHAPELS.

THE "CLAYBRICKÆOLOGICAL STYLE."

NOT less than twenty-five designs for these chapels were sent in, all of them more or less ecclesiastical in style, with the exception of one, which was *Egyptian*, heavy, massive, sepulchral, and solemn, and to be lighted only through openings in the frieze! The memorandum which accompanied it was written in so semi-serious, semi-jocular a style, that I forward it to you for the amusement (if not edification) of your numerous readers.

W. MARSHALL, Clerk of Burial Board.

After giving his reason for adopting the Egyptian style, namely, that the only available building material in the locality is brick, which he thinks does not suit the "ecclesiastical style," the writer proceeds,—

"But it may be said, that the plans I have given in are not purely Egyptian; there is as much of the Grecian style in their composition as Egyptian. I care not what name it gets. I am not a sticker to names, styles, or fashions: it may very appropriately be called the *Plain Common Sense* style. But perhaps that would be too vulgar a name for *archæologists*, therefore I would propose to give it the very learned, elaborate, and pretty name of *Claybrick-æological* style of architecture; and if you adopt it, you shall have the merit of introducing a new style of

architecture into the country, and your names shall be handed down to posterity as the first introducers of the Claybrickæological style of architecture. I would, therefore, strongly advise you to accept my plans, and send me the 10*l.*; not that I care for the money, but I am anxious to get a Claybrickæological Society established, to compete with the numerous *archæological* societies which are disseminating too many *tailoring* views and opinions of architecture into society. But should you not see it in the same light as I do, and be inclined to pass a vote of censure on my plans and description of the Claybrickæological style of architecture, then you will find I have taken shelter behind a screen, and will not feel your censure; and I give you full liberty to publish this in the *Builder*, in order that all the competing architects may see it.

Whatever may be said against the Claybrickæological style of architecture, I am certain that the poet's description of Gothic architecture cannot apply to it viz.:—

'Fine architecture * * * * * * *
Win lows and doors, in nameless sculpture drest,
With order, symmetry, or taste unblest;
Forms like some bedlam statuary's dream,
The crazy'd creations of misguided whim.
Forms might be worshipp'd on the bended knee,
And still the *second* dread *command* be free.
Their likeness is not found on earth, in air, or sea.
Mansions that would disgrace the building taste
Of any mason reptile, bird, or beast.'

Q. E. D."

We may add, that Mr. J. D. Pritchett, of Darlington, was the successful competitor in this matter.

THE LATE FIRE AT GLOUCESTER CATHEDRAL.

IMPORTANT DISCOVERIES.

WE desire particularly to engage the attention of our professional readers in regard to the recent fire at Gloucester Cathedral, as the details are both important and interesting, as well as general in their application.

Shortly before the occurrence of the fire, the workmen who had been engaged in polishing the throne, and other carved woodwork in the choir, left off, it being six o'clock p.m. Three hours afterwards, the fire was discovered in a pew in front of the throne, and where they had left their tools and materials. The men had been employed in applying *boiled oil and turpentine* in equal proportions to the woodwork, *rubbing it dry with cotton rags*, chiefly portions of old cotton stockings. These after use they placed in a rush basket, and set it in the pew in front of the throne. This was exactly the place where the fire broke out three hours afterwards. It was supposed that the men had used fire and left some of it kindled when they finished work; but on a strict examination, all denied that any fire or match had been used by them on that day.

Experiments were thereupon made, with the view of ascertaining distinctly whether the fire might not have been caused by spontaneous combustion. The men employed placed their rags (saturated with oil and turpentine), in a rush basket as before. In an hour the outside of the basket was found to be warm, and soon after the rags began to smoke. In two hours a continuous and strong cloud of smoke escaped from the basket, and in three hours the whole burst into a flame! This experiment, we are told, was twice tried with the same result, and it fully accounts for the fire at the cathedral on the 8th inst. and, doubtless, for many others.

The danger of such a combination as that of *cotton* with boiled *oil and turpentine*, has been long known to many, and we have repeatedly brought it under notice. It is to be hoped that now it will be more widely and generally known than ever. It is probable that in some seasons such spontaneous firing of materials is much more imminent than in others, and this fact itself, we think, may come to form an important link in the chain of evidence, referred to in another column of this day's *Builder*, through which the mysterious cause of cholera, and its consequent cure or prevention, are now, we do believe, very likely to be expiscated. If there be an excess of excited or inflamed oxygen, or "ozone," in the atmosphere, in seasons when epidemics prevail, as Schönbein, its discoverer, alleges, and especially, as Mr. Mayhew maintains, in cholera seasons, it is easy to account for the prevalence of spontaneous fires in *such* seasons at least; and as easy to understand the heretofore strange and unaccountable association of pestilence and fire, from the London plague period down to the present day.

BURIALS IN THE METROPOLIS.

ST. ANDREW'S, HOLBORN.

WILL you inquire what the Board of Health are about in allowing, as I presume they must, the interments to continue, and at a frightful rate, too, in the burial-ground attached to St. Andrew's, Holborn? I think not less than forty per week for the last twelve months have been interred, and they still continue.

To-day fresh ground is opened. It cannot be that pecuniary reasons influence the authorities, as the living is returned at 1,300*l.* per annum; and there is a freehold estate for the church purposes, producing a like amount.

The rector has been absent for many weeks, no doubt to keep out of harm's way. H. W.

CAUSES OF DISEASE.

ST. JAMES'S, WESTMINSTER.

HAVING read the article in your journal on the subject of the late fearful visitation of cholera in the neighbourhood of Broad-street, Marshall-street, and other streets adjacent in the parish of St. James's, in which you describe the bad state of the drains and some of the houses in that locality, and being an inhabitant of that district, I cannot refrain from addressing you, for the purpose of making more generally known, through your columns, a serious nuisance which exists in our vicinity, and which has not been alluded to. It is a large slaughter-house, or, I may say, several slaughter-houses in one, together with tripe-boiling and I believe offal boiling-houses, in Marshall-street, the immediate vicinity where so many deaths lately occurred: there is also a large pen for live cattle as well as an extensive cow-shed attached, and the odours emitted from these places for days together, and frequently at nights, when the offal-pits are being emptied, is past all description: it produces loss of appetite, vomiting, &c.: in fact, persons become seriously ill through it, and as I have myself experienced these effects, I can speak with certainty on the subject. These extensive premises are surrounded by the houses of Marshall-street, Silver-street, Carnaby-street, and Marlborough-row; and the fact of so many deaths having occurred in all these streets about the same time, I think, speaks volumes against this pestilence-creating establishment.

In spite of the great exertions of our parish authorities at this critical period, their labours are thwarted by this vile nuisance.

AN INHABITANT OF ST. JAMES'S.

Miscellanea.

CAMBRIAN ARCHÆOLOGICAL ASSOCIATION.—The neighbourhood selected for examination by this society on the occasion of its holding the eighth annual meeting, was the Vale of Clwyd, and Ruthin was fixed upon as the head-quarters of the antiquaries. Accordingly the members began to muster on 12th inst.; and on Wednesday the inns were full. A museum was formed for exhibition in the court hall, where the annual meeting, consisting of between forty and fifty gentlemen, was held on the evening of 13th inst. Mr. West took the chair, and addressed the meeting. The usual report was then read, and, after some farther procedure, the first day's assemblage was dissolved. On the 14th, a large party of ladies and gentlemen visited the town and castle, where the chief matters of interest were pointed out. In the evening, an essay was read on Roman and other Remains at Caerswys and neighbourhood, by the Rev. David Davies, of Llanwnog, Montgomeryshire. On Friday, the 15th, Eyarth, Efenechtyd, carly remains on adjacent mountains, and Pool Park, were visited. Llanrhaiadr, Denbigh, St. Asaph, and Rhuddlan were to receive the society on Saturday; and Llangollen and Rug to be explored on Monday and Tuesday.

BUILDING ACCIDENT AT LIVERPOOL.—Three men were employed last week in cementing a top cornice at the exterior of a house in Whitechapel, Liverpool, when the cornice, yielding to the weight of the cement, gave way, the scaffolding was thrown down, and the men were projected into the street, from a height of about thirty feet. Two of them were severely injured, but none fatally.

THE SUFFOLK INSTITUTE OF ARCHÆOLOGY AND NATURAL HISTORY.—The next general meeting of the members and friends of this association will be held at Ipswich, on Thursday, 28th inst. under the presidency of the Hon. and Rev. Lord Arthur Hervey, the president of the institute. The proceedings of the day will be closed by a dinner at the Town Hall, to which ladies will be admitted.

PALESTINE ARCHÆOLOGICAL ASSOCIATION.—The first annual general meeting of this new Association was held on 12th inst. at the residence of Dr. John Lee, LL.D. F.R.S. the College, Doctors'-commons, for the purpose of receiving the report of the council and of the treasurer, electing council and officers for the ensuing year, and transacting other business; Mr. Joseph Bonomi, M.R.S.L. in the chair. The report of council was read by Dr. Turnbull, one of the honorary secretaries, and gave a favourable account of preliminary procedure. After this and the treasurer's report were adopted, an address was read, detailing the suggested and contemplated objects of the association, and treating of a variety of archæological subjects connected with the Holy Land, research and investigation as to which were strongly recommended.

SOMERSET ARCHÆOLOGICAL SOCIETY.—The annual meeting of this society commenced on the 12th inst. at Taunton, under the presidency of Mr. Labouchere, M.P. for the borough. The museum was augmented by contributions. A preliminary meeting for election of officers, &c. having been held (at which Sir John Ramsden was added to the vice-presidents), a large company of about 200 met in the Assembly-rooms, when the chairman delivered an opening address. The annual report was then read. It mentioned the accession of twenty-seven new members. The Rev. Mr. Scarth read a paper upon three stone coffins discovered recently at Coombe Down, near Bath. The Rev. F. W. Warre read one by Mr. Stradling, entitled "A Young Turf-parer's Find in the Turbaries," in which he referred to "a curious phenomenon connected with turf-cutting. The delver, sometimes at 8, 9, or 10 feet in the ground, and when within a foot or two of the clay on which the turf rests, is suddenly lifted to the mouth of the pit, so that he steps off without any difficulty." "A very old and experienced workman informed me," added the writer, "that he had had several of these wind and water rides in his time, and that when wind caused the platform to rise, it went up steadily, and when at the top he had only to pass his scythe through the mass, and the wind passed off with a sound like the drone of a bagpipe, and the cutter descended to the bottom and resumed his work. When water was the cause, the ascent was more rapid, and the pit became useless." The Rev. W. F. Jones then read a paper on the Application of Philology to Archæological Investigations, and Mr. Freeman, one on "The Perpendicular of Somerset compared with that of East Anglia." The company afterwards adjourned to the London Hotel, where an "ordinary" or banquet was served. Nearly 100 persons sat down. At the evening meeting, amongst others, Mr. Charles Moore, of Bath, read a paper on the inferior oolite of Dundry, with description of new brachiopods. On the following day the society proceeded on an excursion.

BUILDING LEASES.—It must be admitted that too much care cannot be taken by a builder to ascertain the title to the land on which he is about to expend his money. It may be copyhold, and may subject the builder to not a few of the inconveniences attending that abominable tenure. Some discussion has lately taken place in the *Legal Observer* on the subject, and "Fair Play" (p. 185, of 8th July, 1854), who advocates with some ingenuity the cause of the lord of the manor of Kennington, speciously comes to the conclusion, that no objection would arise on the part of builders to subject themselves to contribute towards the payment of a fine according to the *rack-rent* on a change of tenancy. "Fair Play" states, "It might be inconvenient, but not unjust or hard on the copyholder, who, had he possessed common sense, would not have granted a lease for building purposes, well knowing that the annual value would be very greatly increased, and also well knowing that on every change of tenant *a fine of two years' improved value* would be payable, without making it one of the terms of the lease that all payments of fines *beyond two years' purchase on the rent reserved should be payable by the lessee*. By adopting that course, the copyholder would only have to pay on the amount of the rent payable to him: the *lessee might readily calculate the value of the liability he took on himself*," &c. The object of my addressing you is to request the favour of the sentiments of competent persons on the subject, and more especially whether there is any objection on the part of builders generally, to accept leases with a stipulation to pay all fines assessed on the copyholder on a change of tenancy beyond the ground-rent reserved, they, the builders, effecting insurances at their expense to protect them against such liability. I trust that surveyors, and those interested in the question, will not fail, for the edification of lords of manors, to furnish you unreservedly with their sentiments on the plausible proposal so well calculated to benefit the lord.—F. S. A.

*** It is not a question for discussion. No man in his senses would build on land so circumstanced.

THE ANCIENT REMAINS DISCLOSED AT GLOUCESTER.—The sewerage works are nearly completed, but the greatest curiosity hitherto found, according to the local *Chronicle*, is the tesselated pavement in Long Smith-street, which has now been carefully uncovered. The tesseræ are of four colours, black, white, red, and orange, the border of the floor being of zig-zag pattern, and a centre of foliage, the leaves being heart-shaped. The excavations in the principal streets have been carried, on an average, to a depth of 10 feet, and it is suggested as one reason why more curiosities have not been discovered, that at about a parallel with the present surface, at a depth of 10 feet, are the Roman roadways, formed of concrete: in many places where the substratum was soft or boggy, this concrete was laid upon bushes or faggots—a system which we assisted in re-establishing in the present day. The position of Roman buildings has been defined in several places, the largest in St. John's-lane, where the base of a column of the attic order was found at a depth of 12 feet, and also the foundations of a building, which by its thickness (3 feet) might be supposed to have been extensive. At the upper end of the lane was found, at a depth of 11 feet, a pavement, the *tesseræ* of which were about 1 inch square. The base of an Attic column was also found at the top of Queen-street, at its junction with Eastgate-street. Long Smith-street has been the richest antiquarian field hitherto. This is the highest spot in the city. Here two pavements have been found,—the one before alluded to, and another of a larger and coarser kind, similar to that found in St. John's-lane. The *debris* of decorated plastering were also found, and some Roman tiles. In excavating on the north side of the cathedral a large quantity of *fictilia* of Samian pottery was discovered, and has been partially restored. From the old ditch of the ancient fortifications were brought to light several mediæval knockers. In Westgate-street, the ruins of St. Mary-de-Grace and Holy Trinity churches were met with. These churches were pulled down about 1665. The upper part of the baptismal font of Trinity Church was found. Under the Fleece Inn, the crypt of Trinity Church still exists in good preservation, but is now used as a cellar.

THE ADELPHI THEATRE. — This always well cared-for little theatre has been pleasantly painted during the short recess, and improved before the curtain, and has a very light and agreeable appearance. White with gold mouldings has been adopted, the panels in the front of the dress circle being of light blue, ornamented with cameos. The company remains in its former force. The novelty is the reappearance of Mr. Morris Barnett as *M. Jacques*, for a few nights. It is a beautiful piece of natural acting.

THE CHURCH KEY; A HINT.—Many a time the pleasure of a quiet steeple-chase from village to village has been marred by the discovery that the "clerk," who for the most part has sole possession of the church-key, lives half a mile or more from the church. We have reached the grey old edifice, hot and weary, and thus are doomed, it may be, to retrace our steps for a considerable distance, having unwittingly passed his cottage on our way. In addition to this, it is no rare occurrence to find that the important personage and all his family are from home, haply in the harvest-field, or gone to the market; so that we are regularly nonplussed. This may, perhaps, be a good lesson to teach us patience; nevertheless, I fear that in the majority of cases, it does not tend to promote equanimity. I venture, therefore, to ask the parochial clergy, through the columns of *The Builder*, to endeavour to make some arrangement for preventing such disappointments. That they will be willing to do so, I am fully persuaded; and I anticipate that the mere insertion of this hint will cause the ground of complaint to be in many cases removed.—BETA.

LINCOLN CATHEDRAL.—The underground room beneath the cathedral vestry has been cleansed out, and the earth removed from the window gratings. Access is obtained to it by a trap-door and flight of stone steps. In descending there is a small room, without windows or doorway, access being obtained only through a manhole in the wall, so that the masonry being replaced no one could tell that the room existed. It is supposed to have been the ancient treasury of the cathedral.

FAILSWORTH CHURCH.—We are sorry to hear, says a Manchester paper, that it has been found necessary to close this church, in consequence of the failure of the works. Almost immediately after its completion in 1846, the ceiling began to fall, and it has continued to do so ever since, until at length it has become dangerous to life to assemble within it for divine service. In addition to this, the floors are nearly all destroyed by the dry rot, and they, as well as the ceiling, require to be entirely renewed. The state of this, and of many others of our new churches, it is observed, should make church building committees very careful in the erection of sacred edifices.

GAS.—A Patent Solidified Peat Coal Company has been formed, for the licensing of the manufacture of a sort of artificial coal from peat, free of sulphur, and consolidated so as to form a substitute for ordinary coal. Dr. Letheby gives a favourable chemical report of its properties. It is proposed to get rid of the corrosive adjuncts to coal gas by the use of this peat coal. It is reported by Dr. Letheby to be capable of yielding 14,000 cubic feet of gas per ton, and to possess the requisites for a good fuel.——At a numerous public meeting held at Liverpool, on Monday in last week, it was resolved to support the new scheme of a consumers' gas company, already noticed. The price is proposed to be three shillings, and the maximum dividend 7½ per cent.

"WHY SHOULD WE NOT FILTER OUR AIR?"—Under this title, a writer in the daily papers, under the signature of "Sanitas," brings Dr. Stenhouse's suggestion of charcoal respirators, and the previously well-known detoxicating power of charcoal generally, under review, and advocates its use as a covering over graves, and other sources of poisonous gases, as well as for the more direct filtration of the air as it enters our houses, &c. Many chemical manufacturers, it is stated, have supplied their workmen with charcoal respirators; but we doubt much whether they will be often at the trouble to put them on. Others, he says, recommend that during the time cholera remains amongst us, no person shall walk about unprotected by the respirator. The writer points out that charcoal does not prevent decomposition of animal remains; but on the contrary, promotes it, destroying the noxious gases, however, emitted in the process of decomposition. It is supposed to absorb and condense immense, and indeed, fabulous quantities, both of these gases, and of the oxygen which destroys them; but it appears to us much more likely that it only promotes the combination of oxygen with such gases, or their slow combustion, acting in this respect analogously to spongy platinum in a more obvious process of combustion; and hence, so long as oxygen exists in contact with the noxious gases of decomposition, the charcoal will go on to promote their sanitary combination, independent of any accumulation and exhaustion of oxygen condensed in its pores. There is much importance, together with a little Quixotism, in what is said about filtering our air. As for covering graves, the process must be useful, and ought to be adopted; but we trust it will not hinder the total abolition of intramural burial.

GRINDING AND TEMPERING STEEL AND OTHER METALS.—Mr. J. Chesterman, of Sheffield, has patented several improvements, for grinding, tempering, glazing, brushing, and buffing steel and other metallic articles; the hardening and tempering processes applying principally to thin steel, such, for instance, as saw-blades. A flat plate is to be grinded on both sides at once by means of an upper and nether grindstone, between which the workman forces and works it while the stones are rotating. The "grinders' complaint" is supposed to be mitigated by this mode of operation, which also enables the workman to stand more erect, and use moderate exercise. To glaze, buff, and brush blades of steel and other manufactured metal articles, the patentee employs similar rollers, formed of soft wood, with emery on the surface, or of buff leather, or bristles, or partly of buff leather and part bristles, or the surfaces may be made similar to those ordinarily employed for glazing, buffing, and brushing. For hardening and tempering the patentee takes a strip from 10 to 30 feet long, as required, and winds it into a circular cast-iron box. In the side of this case is a slot, through which one end of the steel protrudes. It is then placed in a furnace, red heated, and withdrawn by one workman, while another draws it through a pair of cold steel or stone dies, by which it is hardened, and comes out flat. Shorter and thicker articles are operated on by placing them as they are in a suitable furnace, and then drawing them through the dies.

CESSPOOLS. Emptying these is fraught with many evils to all concerned: let me suggest a mode that I have seen adopted, viz. that of first laying the drain-pipes, then tapping the cesspool, and flushing the whole into the sewers. A grating is affixed to end of pipes to prevent passage of extraneous matter: the whole filled in with lime and gravel. The total abolition of cesspools must be made compulsory: landlords will not make the necessary outlay unless compelled so to do; and the sooner this is done the better. In many cases I have seen lately, cesspools are actually under the kitchen floors;* an admirable arrangement truly! You will have observed the one thing wanting in the Board of Health arrangements is a corps of properly qualified "Inspectors of Nuisances:" this is at present the province of amateurs, — or rather no one's business.—SALUS POPULI SUPREMA LEX.

* In hundreds of cases, —as we have repeatedly shown.—ED.

MONUMENTS AND EPITAPHS.—Disapprobation was recently expressed in your journal, and very rightly, upon the want of good design in the greater part of the memorials in Kensal-green Cemetery. It is ridiculous to think of things that are intended to be exposed to view and to be seen by all being made so unsightly: they are generally all ugly and all alike, or differ only to show how many degrees of ugliness may exist. It is a disgrace that so much which is repulsive to the taste meets the eye in a saunter among the last resting-places of our fellow creatures; so much that makes us get away as quick as possible from spots that are consecrated by our kindred clay, and so much which reflects such discredit upon the living. Surely the utmost grace and consideration for the dead should be openly shown in the sight of the living, and elegance bestowed on these monuments. So also with respect to epitaphs; they are universally bad; their composition such as would be rejected from the pages of any publication. How often do people, led by curiosity to read the lines, turn away from them in disgust? Of all places these are the last where such a shock should be given to the feelings and to the sense of appreciating what is just and suitable. The ancients managed these things better: even here they sacrificed to the graces; gave what they did write upon the monumental stone all the charm of verse their best poets were capable of, but never perpetuated an untruth, or hinted a questionable fame, or marked it with a profane word. We must improve the character both of our tombs and epitaphs, that our churchyards and cemeteries, rendered worthy of the dead, may at the same time improve and elevate the thoughts of the rising generation.—F. L.

CANTERBURY CATHEDRAL RESTORATIONS.—In the report of the commissioners on the cathedral and collegiate churches, it is recorded that the cost of the rebuilding of the north-west or Lanfranc's Tower, has been 25,000*l.* and that the gradual restoration of the whole fabric, exterior and interior, has been in progress from 1823 to the present time. The whole amount expended in thirty years is stated at nearly 100,000*l.* arising from capitular funds.

VALUATION OF LEAMINGTON.—A correspondent states that Mr. Robert Syer Hoggar, of Wolverhampton, is appointed to make the valuation and assessment of Leamington.

TENDERS

For Pottery Works at Cliffe, Kent. Quantities not supplied.

Hopkins and Roberts	£1,800	0	0
Hocker	1,550	0	0
Tolley	1,165	0	0
Price and Brockwell	1,163	0	0

For the erection of a Dwelling-house, Shop, and Offices at Kingston-on-Thames, for Mr. Nuthall. Mr. James Tillott, architect. The quantities not supplied.

Walker, Kingston	£1,844	0	0
Crowley, ditto	1,809	0	0
Pratt and Son, London	1,698	0	0
Boxall, Kingston	1,497	0	0
Mason, ditto (accepted)	1,437	0	9

For the erection of a Warehouse in Gresham-street for Mr. J. Edmonds. The same architect. The quantities supplied.

Haward and Nixon	£3,077	0	0
Mansfield and Son	3,040	0	0
Lawrence and Son	2,980	0	0
Brown	2,837	0	0
Grindell	2,835	0	0
Brass and Son	2,777	0	0
Rider (accepted)	2,674	0	0

For Schools at Lower Tooting, Surrey. Mr. Joseph Peacock, architect. Quantities taken by Mr. Northcroft.

Piper and Son	£1,689	0	0

ADVERTISEMENTS.

BUCKS COUNTY LUNATIC ASYLUM.—RESIDENT ENGINEER WANTED.—The Committee of Visitors of the Pauper Lunatic Asylum, at Stone, near Aylesbury, in this county, invite APPLICATIONS from persons desirous of becoming Candidates for the Office of Resident Engineer of this Asylum. The person selected must be of good character and experience. He will be subordinate to, and under the immediate direction of the Resident Medical Superintendent, and he will be required to take charge of and to manage the brewing apparatus, and the steam-boilers, and also to devote his whole time and attention to the duties of his office, and to comply with the rules and orders which will be laid down for his guidance, under the authority of the Committee of Visitors, and of the Commissioners in Lunacy.—Applications and testimonials, stating age and qualifications, must be sent to me on or before TEN o'clock on the morning of FRIDAY, the 6th day of OCTOBER, 1854; and candidates for the office are not to attend personally until required by the committee. The situation is one well suited to a man of quiet and domestic habits; and, in addition to the testimonials of efficiency in his own particular branch of trade, which must be strict, and attend to his capability to repair the boilers and other machinery in his immediate department, any such as may give evidence of an obliging disposition, of a ready conformity to rules, and if a married man) the decent deportment and cleanliness of his wife, will weigh with the committee. The salary will be 80l. per annum, with house and garden, free of rent, rates, and taxes, and an allowance of coals and gas, ht.

ACTON TINDAL,
Clerk to the Committee of Visitors.

County Hall, Aylesbury, September 16, 1854.

BOROUGH of WOLVERHAMPTON.—PUBLIC HEALTH ACT.—SURVEYOR WANTED.—WANTED, by the Local Board of Health of the Borough of Wolverhampton, a SURVEYOR. He must be practically acquainted with all the duties devolving upon an officer under the Public Health Act, 1848. He will be required to reside within the borough, and to devote his whole time to his official duties, to the exclusion of all private or other business. Salary, 150l. per annum, and an allowance of 50l. per annum for the purchase and keep of a horse. Offices will be provided by the Local Board, and the Surveyor will have the aid of an assistant and of an office clerk. Persons desirous of applying for the appointment must send in applications and testimonials, addressed to the Town-Clerk, under cover to the Chairman of the General Purposes Committee, on or before the 2nd day of October, 1854.—By order,

THOS. WALKER, Town-clerk.

Town-hall, Wolverhampton, 11th September, 1854.

BOROUGH of WAKEFIELD. — The Council of the Borough of Wakefield, being also the Wakefield Local Board of Health, are in want of a CLERK OF THE WORKS, who must be a professional surveyor, and have a thorough practical knowledge of his profession. He will be required to devote the whole of his time to the duties of his office, which may be stated general y to be as follows:—To take the management of all streets, highways, sewers, and house drains, under the direction of the local board; to make all plans, estimates, valuations, and appointments; and superintend all works directed by the local board; to see that all contracts for works entered into with the local board are properly carried out, to keep all accounts, and make all reports connected with his office; to perform all the duties specially imposed upon the surveyor by the Public Health Act, 1848, or which by that Act or any Act supplemental thereto, or amending the same, the surveyor may be authorised or required to do; and to perform such other duties as are set forth in a general statement, printed copies whereof may be obtained on application at the Town Clerk's Office, Wakefield. Salary, 120l. per annum. All applications, with test monials, are to be addressed to the General Purposes Committee of the said Borough, endorsed "Application for Office of Clerk of the Works," and to be forwarded (prepaid) under cover, to the Town Clerk of Wakefield, on or before 4th OCTOBER next.—By order,

JAMES WYMAN,
Town Clerk, and Clerk to the Local Board of Health.

Wakefield, 20th Sept. 1854.

CLERK of WORKS.—The Chatham Local Board of Health are desirous of obtaining the SERVICES, for a limited period, of a CLERK of WORKS to superintend the execution of drainage works. Those only who are practically skilled in such operations will be considered eligible candidates. Remuneration, three guineas per week. Written applications, accompanied with testimonials, to be sent to the Clerk to the Board, at their Office, No. 311, High-street, Chatham, on or before the 28th day of SEPTEMBER instant.

THOMAS HILL, Clerk to the Local Board.

Chatham, September 16th, 1854.

LEAMINGTON LOCAL BOARD of HEALTH.—To Clerks to Local Boards of Health, Surveyors, and Superintendents of Police.—The Local Board of Health for the district of Leamington, constituted under the provisions of the Public Health Act, 1848, are prepared to receive APPLICATIONS from Candidates for the respective offices of CLERK, SURVEYOR, and SUPERINTENDENT of POLICE and INSPECTOR of NUISANCES (one appointment, for whom no official residence will be provided, with coal and candles). Persons desirous of becoming candidates for any of the above appointments must, on or before the 30th day of SEPTEMBER inst. send in testimonials, addressed "To the Chairman of the Local Board of Health," endorsed "Officers' Duties," stating salary, calling, and age. Each officer will be required to give up the whole of his time to the duties of his office, and not engage in any other occupation without the special leave of the Board. The Board do not pledge themselves to accept the lowest or any tender.

By order,
A. HAYNES, Clerk.

Town-hall, Leamington, 19th Sept. 1854.

TO DRAUGHTSMEN.

WANTED, by an experienced hand, a SITUATION as Foreman to a Paperhanger, or to take the Work of Shops. Reference given, if required. Address J. H. 14, Green-street, Church-street, Blackfriars-road.

TO CARPENTERS, JOINERS, &c.

WANTED, by a steady Young Man, a SITUATION, at moderate wages. Address, A. Shoe Warehouse, 1, Queen's Head-row, Newington, Surrey.

TO CARPENTERS AND BUILDERS.

WANTED, to APPRENTICE a YOUTH, where he will be treated as one of the family. Address, Mr G. H. HORNSEY, saymill Bank, Chelmsford.

TO PAPER-STAINERS, PAPER-HANGERS, DECORATORS, HOUSE PAINTERS, AND BUILDERS.

WANTED, a SITUATION as Traveller or Foreman by a practical Man, thoroughly acquainted, from experience, with every style of decoration and harmony of colour, and able to measure and make out estimates.—Address to S. H. 104, Blackfriars-road.

TO ARCHITECTS AND ENGINEERS.

WANTED, by the Advertiser, a SITUATION in an Architect's or Engineer's office, as an ASSISTANT; is capable of making working drawings, is a good draughtsman, and has a general knowledge of his profession. A moderate salary only required. Satisfactory reference from his employers will be given.—Address, C. W. Office of "The Builder."

TO BUILDERS AND BRICKMAKERS.

WANTED, by a practical BRICKMAKER, an ENGAGEMENT to make Bricks at per thousand; he fully understands the work in all its branches. Can have a good reference.—A. B. Office of "The Builder."

TO LAND SURVEYORS AND ENGINEERS.

WANTED, for a Youth 17 years of age, EMPLOYMENT. He is a neat and quick draughtsman, a good penman, and would prove an able assistant where there is plenty of employment, having had good practice under his father, who is a practical Surveyor. A moderate salary required.—Address to A. B. No. 6, Romney terrace, Horseferry-road, Westminster.

TO LAND SURVEYORS, ENGINEERS, AND OTHERS

WANTED, a RE-ENGAGEMENT, by a Young Man understands surveying, levelling, plotting, and mapping, and acquainted with the general routine of an office; also practically acquainted with land drainage, the construction of roads, sewers, and other works of general improvement.—Address, A. B. Post-office, Muswell-hill.

TO BUILDERS, PAINTERS, &c.

THE Advertiser, an experienced Man, aged 34, requires a CONSTANT SITUATION as WRITER and GRAINER, &c. or Working Foreman; has a thorough practical knowledge of house painting in all its branches, and capable of taking charge of a business. No objection to painting to fill up his time.—Address, H. D. 21, Caledonia-street, King's-cross.

TO BUILDERS AND IRONMONGERS.

THE Advertiser having had much experience in the erection of Hot Water Apparatus is desirous of a RE-ENGAGEMENT. Is a good gasfitter, locksmith, and bellhanger. Can forge and fix gates, balconies, staircases, &c.—Address, F. H. Channan's Post-office, Knightsbridge.

TO ARCHITECTS.

THE Advertiser, a good and expeditious Draughtsman, geometrical and perspective, accustomed to the preparation of all necessary drawings, and to the various duties of an architect's office, desires an ENGAGEMENT in town. Would have no objection on the situation of Clerk of Works. References unexceptionable, and salary moderate.—Address, H. T. Office of "The Builder."

LAND AGENT.—A Gentleman, experienced in planting, draining, timber falling, building, and farming, wishes for EMPLOYMENT as an agent or steward. Good reference and security will be given, and only a moderate salary required.—Apply to A. B. care of Charles Etheridge, Esq. Land Agent, Stanston, Harleston, Norfolk.

TO ARCHITECTS, &c.

MENSURATION.—A practical Surveyor of some experience is prepared to give INSTRUCTION to young Architects, who may be desirous of making themselves acquainted with taking out quantities, measuring, &c.—For terms and particulars apply to Mr JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

TO ARCHITECTS, CIVIL ENGINEERS, &c.

A SURVEYOR, of considerable practical experience, is desirous of meeting with gentlemen who would be willing to enter into arrangements with him either for measuring off artificers' work, making out specifications, and preparing estimates for projected buildings, railways, or other works of magnitude, surveying and valuing property, &c. For further information, apply either personally or by letter, to Mr. JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has just served his articles to an architect and surveyor, is desirous of a RE-ENGAGEMENT, in town or country. Would have no objection to superintend works, and make himself generally useful. The highest references given.—Address, E. F. Whittingham Club, Arundel street, Strand.

A YOUNG MAN who has just completed his apprenticeship in a joiner's shop, wishes for a SITUATION in a Building Office. He has had a good education, and knows something of drawing.—Address, R. Pankebunion, Belgrave-square.

TO CARPENTERS AND BUILDERS.

A YOUNG MAN who has been at the above business four years, wishes to improve himself at the bench for six months or a year.—Apply to E. G. C. 35, Millbank-street, Westminster.

TO CAPITALISTS, &c.

A PRACTICAL ENGINEER, having the management of a large engineering concern at Manchester, which engagement expires in January next, is desirous to meet with a party having capital to establish a business. Having a good connection, being experienced in all engineering branches, of active habits, and proper references, that would be found a good opportunity for any one so to employ his capital.—Apply to THOMAS TAYLOR, Esq. Solicitor, 4, Norfolk street, Manchester.

A YOUNG MAN from the country is desirous of a SITUATION in PAINTING and GLAZING. Perfectly understands lead-light glazing, likewise painting and paper-hanging.—Direct H. B. 24, Thornhill-street, Pentonville, Islington.

TO ENGINEERS, MACHINISTS, &c.

A YOUNG MAN, who has been used to pattern making and wood turning, wishes to ARTICLE himself for a time as an IMPROVER.—Address F. B. L. 43, Aldermanbury, City.

AN Architect and Builder's CLERK wishes for a RE-ENGAGEMENT in a London office (country not objected to). Most respectable references and testimonials can be given.—Address, A. B 44, Frederick-place, Rotherhild street, Islington.

TO ARCHITECTURAL STUDENTS, &c.

AN Architect having several Buildings in progress in Yorkshire, has an OPENING for any gentleman wishing to improve himself in practical knowledge, by acting as Clerk of Works, and preparing Working and other Drawings, under the Advertiser's direction. A small salary will be given.—Address F. M. J. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

AN ARCHITECTURAL DRAUGHTSMAN, accustomed to prepare finished, work ng, and detail drawings, measure artificers' work, &c. is desirous of a RE-ENGAGEMENT. Salary moderate.—Address, A. D. care of Mr. Caplas Clarke, High-street, Lowestoft.

CARPENTERS' COMPANY.—TWICKENHAM ALMSHOUSES.—TWO VACANCIES have occurred in the above Almshouses. Applicants must be freemen or freemen of the Company, at the age of fifty years or upwards. Applications are to be left at "Carpenters' Hall on or before the 30th SEPTEMBER, 1854. Forms of application may be obtained at the Beadle's office, at the Hall.

EDWARD B. JUPP, Clerk.

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c.—JAMES LYNE HANCOCK'S VULCANIZED INDIA-RUBBER TUBING is now manufactured especially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mains of water-works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, stop-cocks, roses, and jets complete. Vulcanized India-rubber suction-pipes for pumps, any length or size, to order; HOSE for brewers' use, fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass-doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It is universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purpose it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate. May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

Strong Sheet Glass packed in boxes of 100 feet, from 12s. per box.

The new Ruby Sheet, the best for embossing, from 1s. 3d. per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

PATENT and BRITISH PLATE GLASS. JAMES HETLEY and CO. beg to inform Architects, Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 45, Soho square, London.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 79, York-road, Lambeth Late Foreman to Messrs. Lawrence and Sons), Sash, Door, and Staircase Manufacturer, with well seasoned materials and superior workmanship, at the lowest possible prices. A Band of Music under the direction of Mr. Wood, of the Royal Italian Opera. The Gas lighting by John Leslie, Esq.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every Kind of Building, as well as to withdraw Steam, Smoke Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

THE SMOKE PREVENTION COMPANY, 32, Charing-cross.—PRIDEAUX'S SELF-CLOSING VALVES, applicable to every description of furnace. Extensive experience has shown the action of these valves to be so perfect as to leave nothing to be desired. Not only do they entirely prevent smoke, but they do so with benefit to the action of the furnace in every point of view, boiling coppers, heated ovens, or getting up steam quicker, and saving from 10 to 15 per cent. of fuel. In no instance have the Company ever received a complaint of having impaired the action of a furnace.

THE SMOKE-PREVENTION COMPANY, 32, Charing cross.—PRIDEAUX'S SELF-CLOSING VALVES, applicable to every description of furnace. Parties who are dissatisfied with the imperfect prevention of smoke, waste of fuel, diminution of steam, or delay in any heating process caused by imperfect schemes, may obtain references at the Offices of the Company, which will enable them to satisfy themselves of the sterling character and great value of the invention.

N.B. The valve has proved itself admirably adapted for brewers' coppers and bakers' ovens as for steam boilers. A month's trial allowed.

PREVENTION of SMOKE, and improved COMBUSTION of FUEL in FURNACES.—WOODCOCK'S PATENTS. The only inventions which thoroughly prevent ALL smoke with perfect certainty, even during firing and stoking. They greatly increase the ordinary draft, facilitate the formation of steam, are subject to no extra wear and tear, and effect a large saving in fuel.—For particulars and charges, apply to WILLIAM WOODCOCK, Earl's Court Brewery, Old Brompton. Where these furnaces may be seen at work any TUESDAY, THURSDAY, or SATURDAY, between the hours of TEN and FOUR.

TO PARTIES DESIROUS OF CONSUMING THEIR SMOKE.

G. WHARTON, proprietor and inventor of Wharton's Patent Smoke Consumer, begs most respectfully to announce, that the public can be supplied with his apparatus on terms considerably less, and at greater certainty, than can be obtained at any other establishment. G. Wharton is in possession of testimonials from most eminent firms.—G. WHARTON, Engineer, Chesterfield, Derbyshire. Inventor, Proprietor, and Patentee. Agent, Mr. LEE, 39, Gloucester-street, Commercial road East, to whom all applications must be addressed.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.)—NURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

HORSES and CARTS.—Builders and Others who may require any brick or other carting done at the present time, may arrange upon advantageous terms with the advertiser, a Government contractor, whose horses are at liberty for employment. Apply to Mr. RICHARD OWEN, Albany-wharf, Regent's-park-basin.

BARROWS.—TO BE SOLD, a Bargain, fifty new NAVVY BARROWS, at 9s. each, and 30 stout ditto, at 10s. each.—Apply, 2, Palace-row, New-road, St. Pancras.

CROWDING'S BARROWS.—WANTED, immediately, either to purchase or on hire, Twenty-four Crowding's Barrows. Letters, post paid, to J. B. care of Mr. Stevens, Baker, North Woolwich, Kent.

DOBBIN CARTS.—WANTED, SIX.—Address, stating price and where to be seen, to J. P. Office of "The Builder."

TO CONTRACTORS AND OTHERS

TO DISPOSE OF, TWELVE good DOBBIN CARTS, nearly new.—Apply to Mr. JOHN WADE, Barking-side, Ilford, Essex.

TO PLUMBERS, GLAZIERS, DECORATORS, PAPER-HANGERS, BUILDERS, &c.

FOR DISPOSAL, an old-established BUSINESS, with good connection. Situation first-rate. To any person in search of a business a rare opportunity offers. Reasons given for retiring.—Apply by letter to A. B. Office of "The Builder."

PLUMBER'S, PAINTER'S, and DECORATOR'S BUSINESS for DISPOSAL. Has been established 30 years. The incoming tenant would only have to take the stock and implements at valuation, about 90l. Rent, 40l. Apply to CHARLES MAIDLOW, Auctioneer, Surveyor, and Agent, 10, Adelaide-terrace, Westbourne-grove.

TO BUILDERS, LAND AND INVESTMENT SOCIETIES, AND OTHERS.

TO BE LET, on Building Leases, on easy terms, a very valuable PLOT of FREEHOLD LAND land-tax redeemed, consisting of about twenty-one acres, situate in the best part of the rapidly increasing and highly fashionable town of Bognor, in the county of Sussex. The land has a considerable and uninterrupted frontage towards and to the sea, and is otherwise peculiarly desirable for building purposes. A branch rail from the South Coast line is on the point of commencement (the Bill having been passed for it), and it is believed that the station will be contiguous to the property. Seven neat residences, which have already been erected upon the land, and the completion of which requires but a small outlay, may also be had on a compounding lease, either together or separately.—For further particulars apply (post paid) to Messrs. BLACKBURNE and GREEN, Architects and Surveyors, St. Clement's Inn, Strand, London.

LANDING WHARF and DRAWING DOCK, LETTS'S WHARF, near Walcot-place, Surrey side.—Every accommodation is offered at this extensive wharf for landing, shipping, drawing and warehousing the English and foreign timber, iron, stone, bricks, cement, coals, &c. &c. 150 feet river frontage for floats of timber, large sawpits, a thirty-ton crane for heavy goods, boilers, &c.; also a ten-ton crane. Apply to ROUTLEDGE and SON, on the Wharf.

IMPORTANT BUILDING GROUND.—THE CITY of LONDON and the Merchant Taylors' Company are prepared to receive TENDERS for BUILDING LEASES of several PLOTS of GROUND in Threadneedle-street and Finch-lane. A plan of the ground and form of Tender may be obtained at Mr HARDWICK's Office, Hanover-chambers, Lincoln's-inn-fields, and at the Clerk's Office, Merchant Taylors' Hall, Threadneedle-street, where Tenders under seal are to be delivered on or before THURSDAY, the 16th day of OCTOBER next, or FOUR o'clock in the Afternoon, after which no Tender can be received. The Committee will meet on the following day, FRIDAY, the 20th of OCTOBER, at TWO o'clock, to open the same, when the parties will be expected to attend. The Company do not bind themselves to accept the highest or any Tender

SAMUEL FISHER, Clerk to the Company.

UPPER TOOTING, near Wandsworth and Clapham-commons.—TO BE LET, on Building Leases, a FREEHOLD ESTATE of about EIGHT ACRES, eligibly situate for the erection of villa residences. The neighbourhood is highly respectable, and six miles only from the Royal Exchange. The new church, at present in course of erection, is on the estate. Plans may be seen, and particulars obtained, at the Offices of Mr. LAMBERT, Surveyor, 4, New Basinghall-street, City.

WHARF TO BE LET, at WANDSWORTH, To Brick, Stone, Lime, Timber, and Coal merchants, Drain pipe Manufacturers, &c.—Within two minutes' walk from the Wandsworth Station, a very convenient WHARF, with a capital to my residence, yard, and back premises. The wharf is in the immediate vicinity of a rapidly increasing neighbourhood. For terms and particulars, apply at the Office of Mr. JOHN TURNER, Architect, 8, Arabella-row, Grosvenor-place

TO BE LET (near Soho-square), extensive MANUFACTURING PREMISES, with steam-power, front-entrance, coach-house, stabling, &c.—Address, Mr. COX, 10, Glasshouse-street, Regent street.

TO CAPITALISTS.

WESTON-SUPER-MARE.—TO BE SOLD by PRIVATE CONTRACT, FREEHOLD BUILDING LAND, the only frontage to the sea and Esplanade remaining unbuilt upon in the town. There are between 2 and 3,000 feet of land, &c. to form squares, terraces, new streets, assembly, reading and club rooms, post-office &c. all much wanted in this rapidly rising place. The purchase money may remain on the land. The proprietor is so fully occupied of a large returning character, if wished, to expend a good sum in equal proportions, in cash and on the estate.—Plans and particulars may be had of the proprietor, B. GUY PHILLIPS, Esq. Barrister-at-Law, Weston-super-Mare, Somerset.

TO FREEHOLD LAND SOCIETIES, BUILDERS, SPECULATORS, AND OTHERS.

TO BE DISPOSED OF, by Private Contract, several acres of highly eligible BUILDING LAND, in the vicinity of Stratford, Essex, within a short distance of a railway station, in a commanding and beautiful situation, where the property is greatly in demand.—For particulars, apply by letter, pre-paid, to A. B. care of Mr. Herbert, Cheesemonger, Liverpool-street, City.

FREEHOLD BUILDING LAND, free of land-tax.—TO BE SOLD, 600 plots of LAND, situate about one mile from the Greyhound, Streatham, 18 feet front, and about 120 feet in depth. Roads and drains made by tender. Price seventeen guineas per plot, including costs of conveyance, to be prepared by vendor's solicitor. Purchaser may pay two guineas per plot down, and the balance by eight monthly instalments. For particulars and plan, apply to Messrs. BLAKE and SNOW, Solicitors, 123, College-hill, Cannon-street, London; and Mr. KERMAN, Surveyor, Thurlow-park, Norwood.

FREEHOLD and LONG LEASEHOLD, BUILDING LAND, COTTAGES, and GROUND-RENTS in the Isle of Wight; Sandown Bay; about Seven Acres of Freehold and Long Leasehold Building Land, adjoining the cliff, with unrivalled views of the English Channel and inland scenery of the Island; a fine and moderately bracing air; sand rock substratum; excellent spring-water; safe and convenient bathing; the church and post-office in the immediate neighbourhood, adjoining the land from Ryde to Ventnor, to and from which a service conveys passengers several times daily.

Also in the above locality, a Freehold Cottage Orné and pleasure-grounds, carriage-house, and stable; two sitting and five bed rooms; and on repairing lease to a highly respectable tenant.

Also a Freehold Cottage and Garden, being "Little Jane's, the young Blacksmith," situate at Brading.

About 1a. 3r. Freehold Building Land, in a most sheltered and picturesque situation at the foot of Brading, down on the Southern side, with splendid views of the sea.

£24 per annum well secured Ground-rents.

The above to be disposed of by private treaty.—Particulars of Mr. WOODMAN, Architect, Hove, Brighton: or Mr. CHARLES TAYLOR, Grange-place, Sandown, Isle of Wight.

TO CEMENT AND LIME MANUFACTURERS.

TO BE DISPOSED OF, by Private Contract, a valuable MANUFACTURING PREMISES (with railway accommodation), erected and made at considerable expense, with plant, machinery, and steam power sufficient for grinding 1,000 bushels a day, and with every facility for obtaining a supply of stone and all materials for manufacturing Roman, Portland, and other like cements. The premises have a very large wharf frontage, and are accessible at all times, and are capable of a great extension of business, and possess peculiar advantages. Also an extensive storehouse and wharf, with a counting-house above bridge, in London, for carrying on business. Early possession can be had of the above premises, and the business can be taken as at present carried on.—Particulars and full information to be obtained by applying to Messrs. DRIVER, Surveyors, Land Agents, and Auctioneers, 5, Whitehall, London.

MR. HORATIO N. GOULTY, Architect and Surveyor, Offices, No. 3, Pavilion-buildings, Brighton, has received instructions TO SELL two detached VILLA RESIDENCES, at HAYWARD'S HEATH, Sussex half an hour by rail from Brighton by railway), with coach-houses and stables, and one, two, or three acres of land. Also, TO LET, on lease, for building purposes, several PLOTS of LAND, at HAYWARD'S HEATH, within ten minutes' walk of the railway station, on the London and Brighton Railway. Good bricks, sand, and water, to be obtained on the estate.—For particulars respecting this and other property, apply as above.

VICTORIA-PARK.—TO BE SOLD, about FOUR ACRES of FREEHOLD LAND, fronting the Victoria park, and within two minutes' walk of the intended station on the North London Railway at Hackney-wick.—Particulars may be obtained of Mr. LAMBERT, Surveyor, 4, New Basinghall-street, City.

FREEHOLD BUILDING LAND, with Brick Earth, Islington.—TO BE SOLD, in one or more lots, about TWENTY TWO ACRES of LAND, situate between the Upper Holloway and Hornsey roads, within two and a half miles from the Angel,—exceedingly eligible for land societies, bricknakers, and builders.—Apply to Mr PEACHEY, 17, Salisbury-square.

GROUND RENTS (leasehold), WANTED to PURCHASE, with thirty or forty years to run. The property must be in London, or vicinity. Address, stating terms and particulars, to DELTA, Jennings's Library, Princes-buildings, Bath.

SPACIOUS BUSINESS PREMISES on LEASE from the Freeholder.—Apply at 1, Homer-place, New-road West, between TEN and FOUR o'clock, p.m.

KENSINGTON.—WANTED to PURCHASE, five or six acres of FREEHOLD LAND, within one mile of Kensington.—Full particulars to be forwarded to Messrs. R. J. and H. CLUTTON, 8, Whitehall-place, Westminster.

TO BUILDERS AND OTHERS.

WANTED to PURCHASE, a FREEHOLD VILLA RESIDENCE, at the west end, with stabling and garden. Regent's-park preferred. Wanted, also, about an acre of fresh land within three or four miles of town.—Apply to Mr. CHARLES LAWS, Architect, 17, Clement's-inn, Strand.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 11 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, coal-pits, &c. Hand pumps, slop, barge, brickmakers' contractors', gold diggers', brewers', chemical works, and in wrought and cast iron, copper and brass, for house, yard, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE: The largest stock in England of single and double pumps, from 4-in. to double 19-in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS

Patent Pump £1 15 0
Patent Pump, with 15 feet of lead pipe attached, and all fixings ready for fixing 3 0 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

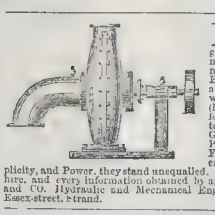
JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, locks, breweries, farms, gardens, stables, liquid manure, cisterns, barges, well-sinking, &c. adapted for any depth. Hydraulic rams and deep wells.



PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto ..... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick-makers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids (hot or cold) raised or forced, will find it greatly to their interest to use GWYNNE and CO'S PATENTED PUMPS. For Economy, Efficiency, Durability, Simplicity, and Power, they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS, Engineers and Portable Engine Makers, 99, Blackfriars road. These engines have been successfully employed for years.

FOR SALE, a 6-horse portable STEAM-ENGINE nearly new, worked only three months, by Tuxford and Son; also, a Mill for crushing hard substances, to be sold cheap.—Apply to P. BLAKER, Crayford, Kent.

STEAM-ENGINE.—FOR SALE, an excellent 8-Horse Power High-pressure, with pipes and foundation-stone, made by an eminent maker. Can be seen by applying to H. O. No. 1, Ravensbourne-street, Bridge-street, Greenwich.

TO EMIGRANTS, ENGINEERS, AND OTHERS.

TO BE SOLD, a capital Low Pressure, Condensing STEAM-ENGINE, of 24-horse power, with two wrought-iron Cornish boilers; also sawing and planing machinery ready to for cutting timber and deals, the whole in good working order, and may be seen at work, and every information respecting them, by applying to C. E. Post-office, Queen-street, Rotherhithe.

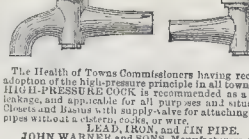
TO ENGINEERS.

WANTED to PURCHASE, a 6-horse power portable STEAM-THRASHING MACHINE, complete, on the most approved principle of construction, with attachments, &c. to serve as a clay or gault mill for tile-making, which not in use for thrashing purposes. Parties applying must state the exact price of the machine, with fittings, &c. complete, for immediate action, the cost per hour for fuel while working, and must warrant the machine to answer the purposes above required. Particulars to be sent to A. Z. Post-office, St. Ives, Hunts.

PRIZE MEDAL, CLASS 32.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 200 feet; their efficiency and durability is by experience established.



The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just issued a Pamphlet descriptive of various Patented Inventions for the Permanent Way of Railways, which are adopted and are being applied to more than 3,000 miles of line. On application a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Secretary.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Maiquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

WASHABLE GILT FRAMES.—J. RIDGWAY, 45, Tottenham-court-road, opposite Mews's Brewery, wholesale manufacturer of frame mouldings, room borderings, &c. of various patterns, strongly recommended for economy and durability. The trade supplied.

THEODOLITE WANTED.—A 7-inch Theodolite, second-hand, in perfect working order, divided either on silver or platinum to thirty seconds, with double telescope and two verniers or nonii.—Particulars, with price, to be addressed H. B. S. Post-office, Burnham, Bridgewater.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, single or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for Exing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and regged on a new system, which gives a superior tone and facility for ringing.

PATENT SOLID SEWAGE MANURE

COMPANY, incorporated by Acts of Parliament, 1852 and 1854.

For Purifying Sewage and other Feculent Waters, without exposure to the atmosphere

For Fixing and Precipitating their Ammonia, Salts, and other Fertilizing Matters; and

For condensing all the Fertilising Ingredients into a solid manure.

(Effected by one continuous operation under covered sheds.)

The Directors are prepared to grant LICENCES to Town Councils, Local Companies, Engineers, and others, for the application in particular districts of the Company's Patent processes under their four existing Patents with all future improvements.

The complete efficiency of the processes has been proved on a large scale at Leicester, and the extensive permanent Works of the Company for purifying all the Sewage of that Borough, containing a population of between 60,000 and 70,000, are now approaching completion, and will be in operation in the course of a few months.

By the Company's Act of the present Session, all Town Councils, Commissioners, and other Public Functionaries are empowered to enter into contracts with the Company without obtaining a special Act for the purpose.

Information as to terms of licence may be obtained on application to the Company's Solicitors, Messrs. WILSON and BRISTOW, 3, Copthall-buildings, London; or to the Secretary, THOMAS PHIPPS, Esq. 46, Coleman-street, London.

By order of the Board,

THOS PHIPPS, Secretary.

London, July 17, 1854

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE,

21, Munster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' oil stains, plug ditto, brass-work &c. &c. sheet-lead, and patent pipe plate, patent plate, sheet and cistern pipes, white-lead, oils, colours, &c. 1s. PER CWT. GIVEN for OLD LEAD; GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.

PURE WATER, for manufacturing purposes,

may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three and four guineas each, yielding 30, 50, 150, and 250 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 5000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

GLAZED STONEWARE and RED

DRAIN PIPE POTTERIES, Copperas lane, Church street, Deptford, Kent. ISAAC PARRY begs to invite the attention of Contractors, Builders, and Wholesale Dealers to his extensive ASSORTMENT OF ARTICLES for sanitary and other purposes, the only manufacture of the kind in the neighbourhood. Priced Lists forwarded on application

---

J. TURNER, Pottery, 2, South Wharf,

Pmed-street, Paddington.

Ironstone, Caen War, Porcelain, White Enamelled Closet Pans and Traps, of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85,

Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Conn's Registered Model Water-closet." This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of internal leakage is prevented.—A sectional of the above may be had on application, or the closet inspected, at the Manufactory, as above.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering it quite impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horseshoe Wharf, No. 6, Upper Thames-street. C. Richardson's, South Wharf, Paddington. G. Erith's, Cambridge Heath Wharf, Hackney.—Mitchwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

VICTORIA POTTERY, LEIGH,

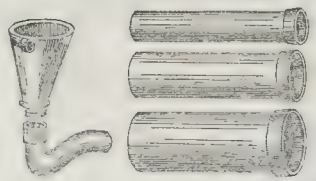
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware, on advantageous terms. Also, MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falconwharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

DOULTON AND WATTS,

LAMBETH POTTERY, LONDON.



REGISTERED CLOSET-PANS IN ENAMELLED STONE WARE.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1781.

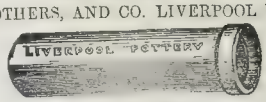
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.



May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2 South Wharf, Pmed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street

Drawings and List of Prices will be forwarded free on application

---

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

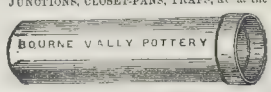
CARNARVON.....Jno. Jackson.	GUERNSEY.....Guerin, Brothers.
PRESTON.....J. Armstead, Hudson-street.	LONDONDERRY...W. and A. M'Elwee.
KENDAL.....Robt. Thompson.	WIGAN.....James Fairclough, King-street



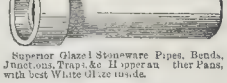
The most economical and efficient system of drainage is formed with DOULTON'S STONE WARE PIPES.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities

---

REDUCTION of PRICE in SALT-GLAZED STONEWARE PIPES, BENDS

JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the



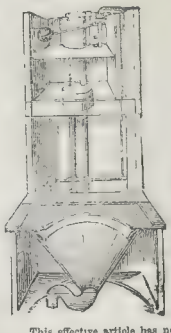
NEAR POOLE, DORSET; TWENTY PER CENT. UNDER LIST PRICE.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London, Agent; or to Mr. J. HUDSON, Agent, at the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. They are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

PATTEN'S PATENT HIGH-PRESSURE

WATER CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main. Also PATTEN'S Improved Powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

HAYES, BROUGH, and CO.

Works: Liwynemion, near Wrexham.
Offices: 11, James-street, Liverpool,

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

MILL-WALL POTTERY (near Scot

Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

JENNINGS'S GULLY AND OTHER TRAPS.

Fig. 1.

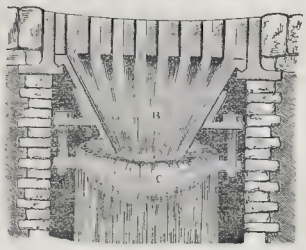


Fig. 2.

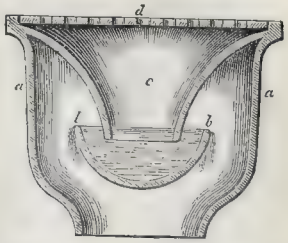

Fig. 3.

The poisonous gases generated in sewers and drains, from the decomposition of animal and vegetable matter, should not be allowed to escape, to the injury of the public health.

All Drains should be trapped, and those Traps which keep back all impure air, and prevent improper matters from entering drains, are the Traps best suited for the purpose.

GEORGE JENNINGS submits the above illustrations of his PATENT TRAPS for those interested, to judge of their merits.

Fig. 1 shows one of JENNINGS'S STREET GULLY TRAPS, in an iron case, which can be had of the following sizes:—10½ inches by 10½ inches; 12½ inches by 12½ inches; 14½ inches by 14½ inches; 17 inches by 14½ inches; 20 inches by 20 inches.

Fig. 2 shows the same kind of Trap, without the iron case, the brickwork of the gully hole answering for the case, and can be had as follows:—11 inches by 11 inches; 16½ inches by 14½ inches; 20 inches by 20 inches; 30 inches by 18 inches.

Fig. 3 shows one of JENNINGS'S SINK or AREA TRAPS. These can be had from 4 inches to 9 inches diameter, in lead or iron, galvanized or otherwise.

AS A PROOF OF THE EFFICIENCY OF

JENNINGS'S WATER-CLOSETS,

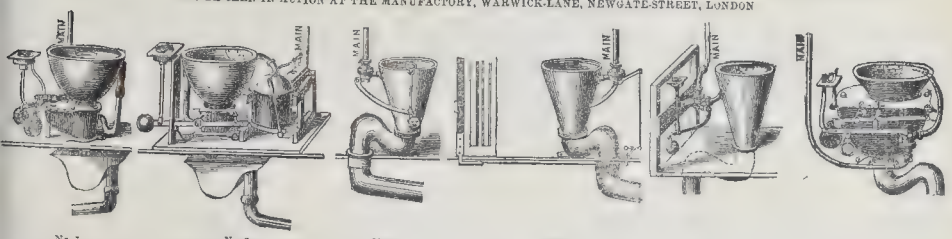
He has much pleasure in referring to the following Public Works:—

TY'S HOSPITAL, ST. THOMAS'S HOSPITAL, ST. LUKE'S, CITY OF LONDON, ADELPHI THEATRE, HOLBORN, STRAND, CAMBERWELL, WESTMINSTER, KENSINGTON, AND ST. SAVIOUR'S UNIONS;

THE DOCKYARDS OF WOOLWICH, DEPTFORD, SHEERNESS, AND DEVONPORT; THE BREWERIES OF MESSRS. REID & CO.; MESSRS. ELLIOTT, WATNEY, & CO.; MESSRS TRUMAN, HANBURY, & CO.;

The Establishments of Messrs. Hitchcock, Rogers, and Co.; Pawson and Co.; Bradbury, Evans, and Co.; Devas; Routledge and Co.

Besides which the Dublin and London Exhibitions, the Crystal Palace, Sydenham, Model Lodging houses, and many other public and private works can be referred to.



The prices of these Closets bring them within the reach of all classes, besides which they save the usually expensive Lead Trap. They are imperishable in their materials, and as easy to fix Cock to a Sink

Prices and full particulars of JENNINGS'S PATENT DRAIN PIPES, Imperishable WATER-CLOSETS, SLUICE VALVES, FIRE and ALL OTHER COCKS, Shop-shutter Shoes, &c. can had on application, or by post, if two stamps are enclosed to

GEORGE JENNINGS, ENGINEER AND GENERAL BRASSFOUNDER,
29, Great Charlotte-street, Blackfriars-road, London.

J. TYLOR AND SONS'
PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON

No. 1. No. 2. No. 4. No. 5. No. 6. No. 8.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

Y ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

MAYER, BOULTON, and CO. (from London), CORNWALLIS POTTERY, STAPLETON-ROAD, BRISTOL.—This is the only Manufactory in the Kingdom for the exclusive production of Pipe, Closet, Sanitary, and Lavatory Basins of all descriptions. M., B. and Co. having purchased these extensive Premises, which were formerly used as a tile factory and foundry, and converted the same into a Staffordshire Pottery, are now producing from 1,500 to 2,000 of these articles weekly, and from their intimate knowledge of, as well as their long practical acquaintance with, this peculiar business, they can manufacture cheaper than any other House. They invite especial attention to their Drab Hopper Basin and Trap, at 7s. 6d. each, delivered in any part of the kingdom, and where large quantities are required a liberal discount is allowed. Orders for White Drab, Marbled, Blue Printed, Enamelled, and Gilt Goods attended to on the shortest notice.

London Depôt—18 Wharf, City basin.

N.B. On Sale, Two Lathes, a Drilling Machine, a Facing ditto, a Punching ditto, a Bending ditto, a Stove, a large Fan, a pair of Shears; also, a great variety of Patterns and Tools used in the foundry business, and which must be removed before M. B. and Co. can complete their alterations.

SALES BY AUCTION.

FREEHOLD BUILDING LAND, at Maid-tone, opposite the first mile-stone on the Tunbridge-road, as a location that cannot be surpassed in the neighbourhood in the richness, variety, and beauty of its scenery.

MR. TOOTELL is directed to SELL by AUCTION, at the QUEEN'S HEAD INN, Maid-tone, on WEDNESDAY, September 27th, at 6 P.M., in lots, ELEVEN ACRES of excellent valuable BUILDING LAND, bounded on the east by the premises of the Manor House, the residence of Thomas Hyde Dyke Esq. having a frontage on the south side of the new road, 1,100 feet to the turnpike-road, and frontages of about 1,100 feet to the new road intended to be made, across the land, and to join the road at the rear of Mr. Hyde's estate, thereby affording another access to and from Maidstone. The land slopes to the south, and contains fine veins of ragstone and brick earth. The lots may be viewed.—Particulars, plans, and conditions of sale may be had of Messrs. W. and S. Norris, Solicitors, 7, Lincoln's Inn, London; at the Auction Mart, London; at the Crown Inns, Tunbridge and Seven Oaks; of the Sun, Cranbrook; New Falcon, Gravesend; at the Place of Sale, and of Mr. Tootell, Land Surveyor, Maidstone.

TO TIMBER MERCHANTS, SHIPBUILDERS, and others.—New Houghton, within twelve miles of the port of King's Lynn, and thirteen from the port of Wells

Lyon's Inn Hall, Newcastle street, Strand.

MINERALOGY.—KING'S COLLEGE, LONDON.—PROFESSOR TENNANT, F.G.S., will commence a COURSE of LECTURES on MINERALOGY, with a view to facilitate the Study of Geology, and of the application of Mineral Substances in the Arts. The Lectures will be illustrated by an extensive collection of Specimens, and will be on FRIDAY, OCTOBER 6th, at NINE o'clock a.m. They will be continued on each succeeding WEDNESDAY and FRIDAY at the same hour.

R. W. JELF, D.D. Principal.

PROFESSOR DONALDSON'S LECTURES on ARCHITECTURE and CONSTRUCTION at University College, will commence on FRIDAY, the 20th of OCTOBER. First course classes, at Half-past Six o'clock, p.m.; second course classes, at a Quarter past Eight o'clock, p.m. Further particulars may be had at the College.

COMPETITIONS.

TO ARCHITECTS

THE Committee of the Sheffield School of Art, being about to ERECT a NEW SCHOOL, have determined on offering Five Premiums of £10 each for designs, and hereby invite Architects to send in Plans, Elevations, and Sections complete. A Design is required to be on the same scale, namely, one inch (1 in.) per foot, and must be sent in on or before the 31st of DECEMBER next, addressed to the Honorary Secretary of the School of Art, Sheffield. Competitors are requested to put a distinguishing mark or motto on their designs, but not to attach their names. The letters accompanying the plans to contain the names of the competitors, but the letters of the successful competitors only will be opened. The architect who shall produce the most suitable design will have the erection of the building, and the second best design will receive a premium of fifty pounds. No plans will be received in competition which cannot be carried out for a sum not exceeding £2000. For plans of the ground, and particulars of requirements, apply to the Honorary Secretary, Sheffield; or at the Office of "The Builder."

By order of the Committee,
BENJAMIN WIGHTMAN, Honorary Secretary,
Sheffield School of Art.

KINGSTON-UPON-HULL.—The NEW CORN EXCHANGE.—A PREMIUM of £20 has been awarded by the Town Council to a Plan approved of as the best, and marked "Prudence," belonging to Messrs. BELLAMY and HARDY, Architects, Lincoln; and £10 10s. has been awarded to a Plan marked "Alpha," belonging to Mr. J. P. EARLE, Architect, Hull, which has been deemed the second best.

PREMIUMS for DESIGNS.—The Charlton Burial Board offers a Premium of Twenty Pounds for DESIGNS and ESTIMATES for the necessary CHAPELS, LODGE, &c., and the Laying Out Grounds, and Planting the intended Burial Ground at Charlton, near Woolwich, which will contain a minimum of Ten Pounds for detailed Drawings and Specification, to enable the Board to enter into contracts for the execution of the Works. Designs to be sent to Mr. J. L. BLENKARNE, Clerk to the Burial Board, Old Charlton, near Blackheath, on or before SATURDAY, the 21st of OCTOBER next. Any person desirous of competing for the above, will be furnished with a plan of ground and other particulars on application to the Clerk to the Board.

CONTRACTS.

MARKET WEIGHTON DRAINAGE and NAVIGATION.—To MASONS, EXCAVATORS, and GENERAL CONTRACTORS.—The Trustees of the Market Weighton Drainage and Navigation are prepared to receive TENDERS or PROPOSALS for the TAKING DOWN and RE-BUILDING of a PORTION of the HUMBER LOCK on the said Drainage and Navigation, the Re-laying of the Floor thereof, the Lengthening and Fixing of New Gates, and to Construct and Execute other Works connected therewith, and Plans and specifications may be seen, and further information obtained on and after THURSDAY, the 5th day of OCTOBER next, on application to Mr. J. W. LEATHER, Clerk to the Trustees, at the Office in Market Weighton. Tenders to be delivered up at the Office in Market Weighton, before 12 o'clock, a.m. on THURSDAY, the 12th day of OCTOBER next.

By order,
J. B. BURLAND, } Clerks to the
JNO. S. W. KIRKPATRICK, } said Trustees.
Market Weighton, Sept. 19, 1854.

TO BUILDERS

THE COMMITTEE of the CITY of LONDON and COUNTIES FREEHOLD LAND SOCIETY are desirous of receiving TENDERS for the Build ing of TWO SIX ROOMED HOUSES in a Street near the Railway Station, at SOUTH GATE. The specification and plans may be seen at the Offices of the Society's Surveyor, Mr. Albert Wigginton-chambers, Bunnell-hill, on and after the 27th inst. Tenders, sealed and endorsed, addressed to the Warden, to be delivered to the Architect, on or before the 12th day of OCTOBER next. The acceptance of the lowest Tender is not guaranteed, and parties must be prepared to give proper security, if required.

H. R. YEOVILLE, Architect.

TO BUILDERS AND OTHERS

PERSONS desirous of sending in TENDERS for the whole of the works proposed in order to effect the ENLARGEMENT and RESTORATION of the CHURCH of ST MARY, at ILKESTON, in the county of Derby, may see the plans and specification at the Offices of the Architect, Mr. THOMAS LARKIN WALKER, 6, New-street, Leicester, or at the Offices' Clerk's Room, at Ilkeston, on and after WEDNESDAY, OCTOBER 11th. Bills of quantities and forms of Tenders may be had of the Architect on application either personally or by letter, on and after WEDNESDAY, OCTOBER 11th, 1854. Sealed Tenders to be delivered to the Rev. G. SEARLE EBSWORTH, Vicar, on or before WEDNESDAY, OCTOBER 18th, 1854.

CONTRACTS.

BUILDERS desirous of CONTRACTING for the ERECTION of a new CHURCH at Ford Norton, in the county of Essex, for the Rev. H. Holland, may see the plans and specification at the Office of G. E. PRITCHETT, Architect, Bishop Stortford, Herts, and after the 25th of SEPTEMBER. Tenders to be delivered to the Architect on the 9th day of OCTOBER next. The rector does not pledge himself necessarily to accept the lowest Tender.

TO BUILDERS

ALTERATIONS and ADDITIONS to the WHITE HART HOTEL, at REIGATE.—Parties desirous of TENDERING for the several works in the above matter may inspect the plans and specification at our offices, High-street, Reigate, until the 12th day of OCTOBER next, before TWO o'clock, on which day sealed Tenders are to be delivered, endorsed "Tender for Additions to White Hart Hotel." The lowest or any Tender will not necessarily be accepted.

PAGE and DREW, Architects, Reigate and Dorking

COVENTRY LOCAL BOARD of HEALTH.—To SEWER CONTRACTORS and Others.—Proposals are invited for CONSTRUCTING for the CORPORATION of about 11,149 YARDS of BRICK SEWERS, and 25,982 YARDS of PIPE BRANCH SEWERS in connection therewith, according to the plans and specification, which may, together with the form of Tender, be seen at the Office of Mr. ROBINSON, C.E., Bank Chambers, High-street, Coventry, between the hours of ELEVEN o'clock a.m. and ONE o'clock p.m. of each day, until MONDAY, the 23rd of OCTOBER next, are requested to send sealed Tenders, endorsed "Tender for Sewers," to the Town Clerk's Office, Little Park-street, Coventry, at or before TEN o'clock in the forenoon of the above-mentioned day. The Local Board will require the whole of the works to be completed on or before the 31st day of JULY, 1856, in such portions and at such times as they may direct; and they do not find themselves to accept the lowest or any Tender.—By order of the Local Board of Health,

THOMAS HALL TROUGHTON, Town Clerk.

Coventry, September 15, 1854.

TO DUST CONTRACTORS AND OTHERS.

THE Commissioners for Paving, &c. Kentish Town, will meet at their BOARD-ROOM Junction-place, Kentish Town, on FRIDAY, the 6th OCTOBER, at SEVEN o'clock in the evening precisely, to receive SEALED TENDERS from persons willing to contract for one year for the privilege of COLLECTING the DUST, CINDERS, ASHES, &c. from the several houses and premises of the Inhabitants within the Parish, the Rent and remaining Instalments to be paid quarterly in advance; the first payment to be made on the execution of the contract. The contract will be required to be entered into and respectable sureties to the satisfaction of the Commissioners. The cost of the contract to be paid by the contractor. Tenders to be sealed up and delivered to the Surveyor, Mr. JOHN KNIGHT, at his residence, No. 3, Montague-place, Sept. 28, 1854, endorsed "Tender for Dust," and no person on behalf of each Tender is requested to attend. The Commissioners do not bind themselves to accept the lowest or any Tender. By order of the Board,

JOSEPH SALTER,
Clerk to the Commissioners.

3, Montague-place, Sept. 28, 1854.

TO IRON-FENCING CONTRACTORS, SMITHS, AND OTHERS

GLOUCESTERSHIRE FREEHOLD LAND and HOUSE SOCIETY.—The Executive Committee are prepared to receive TENDERS for executing about 800 lineal yards of IRON HURDLE FENCING and GATES, on the Painswick-road Estate, near Gloucester. DEFRIES'S Ventilating Apparatus can be fitted to Buildings by the Contractors, and the Trade supplied at the Offices, 67, Cornhill, or at the Manufactory, Newcastle-street, Strand.

WARMING by HOT WATER.—J. WEEKS and CO., KINGS-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, beg most respectfully soliciting the attention of Architects, Builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water on the principle recommended in the Report of the Architectural Society, which fully received the acknowledgments of the Rev. H. J. Boggis, delivered at a meeting of the Architectural Society, when Mr. Rice's system of heating, by J. Weeks's Hot Water Apparatus, was considered the most perfect and economical mode of warming churches, &c. Rising from all directions, and producing perfect ventilation with a uniform comfortable warmth throughout the buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boiler, requiring no brickwork. WARM AIR APPARATUS. SAMUEL SAYLES, Engineer, Battersea.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of VERTICAL SADDLE BOILERS in STOCK; also fire and flue bars, ornamental and plain ash-pan doors and frames, fire-clay and other fire goods, and the usual hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket pieces, &c.; also, ironplates. Drawings and prices of the above on application to J. JONES, Ironfounder, No. 9, Bankside, Lambeth, near the Obelisk, Surrey.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, boards, at houses, is obtained by the BOILESVE'S PATENT CALORIFERS, evaporating in twenty-four hours about 600 lbs of water without altering the finest forms or injuring the quality of the timber. Time for drying woods to their use, by the above means, from twenty to fifty hours. A saving of 50 per cent. in fuel. A great deal of the largest sizes saved, and rent thereby considerably reduced by the use of the above valuable apparatus. Also in operation as Wood-paving Company's Works, Pimlico, and Mr. Mackenzie's, Mount of Wood-paving, West Bromwich, Staffordshire. Models of the above, and several malsters, millers, and manufacturers in London, and country.—Apply, per post, to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Royal Institution, WEDNESDAY, MAY 14, results perfect combustion, consumes fuel, requires much less attention than the common stoves in general use, and is adapted by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 372, Holborn.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all RE-MAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Box-stops and Striking Plates, Fire-proof Safes, Deed and Cash Boxes, Engraving and Letter Presses. Descriptions and lists of prices may be had at the Depôt, 36, Strand, gratis.

SPECIAL DOOR LOCKS, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS. FIFTEEN SHILLINGS EACH.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who begs to call the attention of Builders, &c. to his Stock of Ironmongery, Brass Founding, Nails, Wrought and Cast Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired & so cheap.

J. H. BOOBBYER, 18, New STURCH and BOOBBYER, established nearly 30 years, for the supply of Goods from the best Manufactories at the lowest prices.

13, Stanhope-street, Clare market, London.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers and Bank-notes preserved in one of CHUBB'S SAFES, after four out of five days' intense heat. COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1834.

"Messrs. Chubb and Son.

"Gentlemen,—We have great pleasure in communicating to you that the large Patent Fire-proof Safe that we purchased from you 12 years since, for our late office in New Hich-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe after being exposed for four hours to the intense heat, was unlocked on the morning of the 2nd of March; the locks all answered to their respective keys, and all the papers therein were perfectly uninjured, except that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements. Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms, all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application to

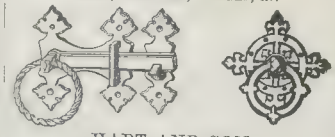
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, either public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

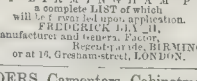
The floors are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.



Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for massive girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for many dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, Yorke-chambers, Adelphi.

DR. ARNOTT'S VENTILATORS, &c.



LOCKS, HANDLES, HINGES, &c.

HART AND SON,
MANUFACTURERS, &c.

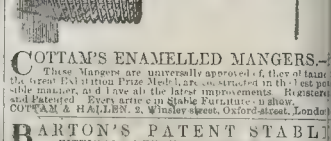
HAYWARD, BROTHERS, IRONMONGERS,
103, BLACKFRIARS-ROAD.

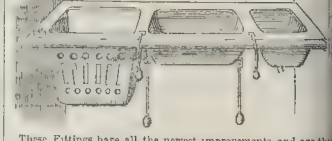
NAILS and IRONMONGERY, from BIRMINGHAM direct, Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES, a complete LIST of which will be forwarded upon application.



FREDERICK LEA, JUN.
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

BUILDERS, Carpenters, Cabinetmakers, and others are invited to inspect the STOCK of NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY, at the lowest possible prices at NAYLOR'S late Bennett and Naylor Great Western Warehouse, 536, Oxford street, between North Audley street and Park street.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented Fixed Iron Racks and Stable Furniture in show.—COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.



BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of the description to be had. Plain Enamelled, and Galvanized. All kinds of Stable Furniture kept in Stock. Iron Hurdles, Gates, Fencing, &c.

Manufacturer of BARTON'S Patent Combustion Smoke-curing Chimney Cans, 50 of this pattern on Buckingham Palace. Price 35s. each. JAMES BARTON, Ironfounder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled
Cosmos Watch-house, 81, Upper Thames-street.

FOUNDRY AND IRON WORKS,
88, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION either structural or ornamental.

Iron Columns, Balconies, Railing, Ornaments, Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. Air-tight and Sand Door, a liquid for tight ash-pits, &c.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book safes and Strong Rooms, Tanks and Boilers, and every description of ironwork, prepared in, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,
88, DRURY-LANE, and CHARLES-STREET.

IRON FOUNDRY, 80, Goswell-street (late of Brick-lane, St. Luke's).—J. J. JONES, having made great additions to his STOCK of PATTERNS, begs to inform the Trade that he can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Openings, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wrought Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 11, 11, and 12, Charles-street, Long-acre, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

STEAM-ENGINE, MACHINERY, CISTERNS, COLUMNS, &c. FOR SALE

One fine horse Pig-arrow and Egg-ended Boiler	£12 10
One Screw Punching-press and Handle	3 0
One Iron-founder's Pan, complete	2 10
One Fly-wheel, 7 ft. 6 in. diameter, with cast boss, wrought arms, and cast rim, about 6 cwt.	4 0
One Country-made Lathe, suitable for turning up rough work, with 15-inch centres, wood bed, and two hand slide-rests	15 0
A wrought-iron Boiler, suitable for heating green houses, &c.	3 0
A Warner's Hand-barrow Water-engine	2 0
One strong, round, wrought Water-cistern, holding 450 gallons	7 10
One ditto, ditto, 350 gallons	4 0
Twelve Hollow Iron Columns, with caps and bases on them, 5 inches at the bottom, and 3 inches at the top, the lot for	12 10
One Two-roomed Iron House, lined inside with wood, the roof forming the package, two windows to each room	25 0
Barrack, Exall, and Andrews' One-horse power patent Gear-work, complete for chaff-cutting, grinding, &c.	10 10
One Screw Lifting-jack, equal to five tons	4 0

Apply to GEORGE BOWER, Vulcan Foundry, St. Neot's, Huntingdonshire.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc, it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid forward, effectually protects the Zinc from those atmospheric influences which so rapidly cause its decay, while the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For reverse Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No 11	Gauge weighs about	18 oz.	per foot super	
No 13	"	"	24 oz.	6d. do.
No 14	"	"	21 oz.	4s. do.
No. 16	"	"	26 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

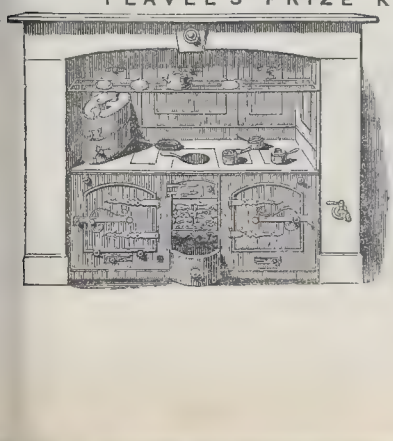
DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,



Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

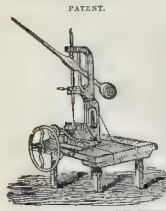
WIRE STRAND FENCING,

as furnished with all its fittings, by R. S. NEWALL and CO having since the annual Report of practical engineers confidently recommended as the best fencing for park and farm enclosure, or subdivisions, for temporary agricultural purposes instead of any kind of hurdles), for roads, &c. and &c. chief fencing.



The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fixed by R. S. Newall and Co. after the model of the fences of Epsom material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

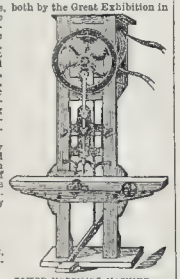
OFFICES.—Gateshead-on-Tyne.
110, Strand, London
67, Buchanan-street, Glasgow.
27, Dale-street, Manchester.

KIMBERLEY'S PATENT FLOORING CRAMPS still continue to take pre-eminence in all markets, notwithstanding the constant imitations of them which are daily offered to builders throughout the world. Thousands of architects and builders are prepared to testify to their great worth, from their simplicity, durability, and the great saving of labour they never fail to effect. Messrs. ROBINSON, LANGTON, and CO., 7, Talbot-court, Gracechurch-street, London, sole wholesale agents for this article (and all Kimberley's patent goods), announce that they keep a large stock always on hand, and they direct attention to the fact, that the real patent article, as sold by them, never lifts the boards or springs the joists; free out of the sale of many thousands, it is a well-established fact that three only have got out of repair. Merchants, shippers, and ironmongers supplied same as at the manufacturer's prices. Prices, 17s. 24s. and 28s. each. The several new inventions now introduced have failed to suppress the sale or break the confidence of the public in this cramp in the least degree.

PATENT.

BUILDERS will find that the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour. Can be had only at WEBB & GREENWAYS, Stee house lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener, Gothic Pattern Casement, and other Window Fastenings. Double action Floor Door-springs. Cupboard Turns, Barrel bolts, Pin on and other Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.



PATENT MORTISING MACHINES.—Builders and Joiners are respectfully solicited (before purchasing a machine) to inspect France's Patent, to be seen at 20, North Wharf-road, Paddington; they may be had on trial, and if not approved of returned. Price from 12l. 12s. with set of chisels complete. Every description machines for wood-cutting made to order on the most approved principles.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, TOWNS, JAMES, and CO.'s, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.

POWER MORTISING MACHINE.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by
WILLIAM FURNESS,
Patentee, No. 2, Lawton-street, Liverpool, from whom full particulars may be obtained.

TO ARCHITECTS, SURVEYORS, BUILDERS, PLUMBERS, &c.

WETTERSTEDT'S PATENT ROOFING METAL (originally named Marine Metal), has been proved by long experience, by its lightness, 1lb. to 2 lbs. per foot superficial, to be the cheapest, and by its durability to be the best and most effectual covering for flats, circular roofs, verandah's, &c. Proofs and testimonials of which, and references to all hirings up in which it has been used, with price and every other particular, may be obtained on application to the sole proprietors and manufacturers, W. W. and H. JOHNSON and SON, White Lead and Colour Works, Commercial-road, Limehouse, London. It is also made 8 oz. per foot for lining damp walls, &c.

NORTH BRITISH CAST and WROUGHT IRON OFFICE, No. 18, King William-street, Charing-cross, just opened, through which Builders can be supplied with castings direct from the foundry in Scotland, and wrought-iron goods from the works near Birmingham, at the manufacturer's prices, as the following list will testify:—

	2 in.	2½ in.	3 in.
Rain Pipes	10½d.	1s. 1d.	1s. 6d. per yard.
	3½ in.	4 in.	4½ in.
Cast-Iron Gutters	9½d.	10d.	1s per yard.

The new O G SOCKET GUTTERS. Instead of the clips being loose, they are cast on in the solid and form the Socket.

	3½ in.	4 in.	4½ in.	5 in.	
Plain	1s. 2d.	1s. 6d.	2s.		per yard.
Lion-head	1s. 2d.	1s. 4d.	1s. 6d.	2s.	"

All the larger sizes of pipes and gutters at equally low rates.
AIR BRICKS.—A new registered design at 4s. per dozen.
GALVANIZED CAST-IRON FURNACE-PANS, 6 to 25 gallons, at 1½d. per gallon.
SASH WEIGHTS, 8s. per cwt.
Stucting Cottage Ranges, with Boiler and Oven, from 32s. each.
Register and Elliptic Stoves, and all kinds of Builders' Castings at similar reduced quotations.
Orders taken for comm n Bar Iron, at 10s. 6d. per cwt. Cash on delivery. Manager, Mr. RUSSEL.

IRONMONGERS, ZINC-WORKERS, &c. supplied with Sheet Zinc, Perforated Zinc, Tubing, &c. of best quality, at prices lower than any other house, at WILLIAM HARMER'S Iron Metal, and Zinc Warehouse, New Peter-street, Horsley's road, Westminster. Cast-iron rain pipes, sash-weights, railing bars, &c.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for cabinets, parks, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO RAILWAY CONTRACTORS, BUILDERS, &c.

ON SALE, a large quantity of PLANT, consisting of locomotives, earth waggons, 16-horse engine, with mortar-pans complete, travelling cranes, temporary rails, barrows, planks, carts, dobbin-carts, trucks, shear legs, crabs, and sundry materials.—Apply to A. and G. HOLME, Crook-hall, Wigan.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, CABINET-MAKERS, AND THE TRADE IN GENERAL.

IRONMONGERY WAREHOUSE, established only for the sole supply of the above trades at wholesale prices. JAMES NAYLOR (late Bennett and Naylor), Birmingham and Wolverhampton, Agent and Factor, the Great Western Warehouse, 223, Oxford-street, between North Audley-street and Park street.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 5½d. 6½d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 55s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 66s. per cwt.
Best Patent Sash Line.

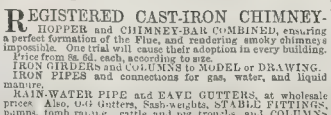
6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.
Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.



BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PFEIL and STEDALL'S, Nos. 8 and 6, BROAD-STREET, BLOOMSBURY. The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-Iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus, (Gas works erected complete) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every descr ption of Smith's Work of the best materials and workmanship. N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-POT HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 6s. 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of Builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground street, London, near Blackfriars-bridge.

THE LAW COURTS and ST. GEORGE'S-HALL, LIVERPOOL.—The inauguration of St. George's-hall, and the universal admiration which it has elicited as a work of consummate architectural magnificence and public utility, forcibly remind us of the obligations and the respect we owe to the genius and the efforts of its lamented author, the late W. L. Elmes, esq.

We should feel the obligations the more sensibly from the conviction that those efforts in our favour were amongst the proximate causes of his premature death, and from the fact that his surviving widow and son have been thereby subjected to pecuniary privations and embarrassments which we are honourably bound to mitigate by every means in our power. A committee has, therefore, been composed of the subjoined gentlemen, to carry out this expression, in which it is confidently believed every individual of our community will warmly participate, by the provision of such a sum as will relieve Mrs. Elmes from those embarrassments under which she is now suffering.

The late Mr. Elmes rose early into eminence upon very limited means; but the expenses consequent upon such professional distinction were unfortunately unrecompensed by that recompense, which, with time, would naturally have followed his meritorious labour. Still he neglected none of the duties of son, a husband, and a father. The prudent insurance of his life in the Sun Office was unhappily vitiated by his vain search of health in Jamaica, and his death there in 1847, of which a small sum only was recovered by the liberality of the directors of that institution.

The following gentlemen have been appointed a committee to receive subscriptions, and your contribution is respectfully solicited.

COMMITTEE.

The Mayor.	John Hay, esq.
William Brown, esq. M.P.	Wilfred Troutbeck, esq.
William Rathbone, esq.	William Fletcher, esq.
James Aikin, esq.	Rev. Dr. Hume.
J. K. Jeffery, esq.	Thomas Avison, esq.

TO BUILDERS' APPRENTICES, WORKMEN, &c.

EVENING INSTRUCTION given to a limited number of PUPILS in ARCHITECTURAL DRAWING and GENERAL DESIGN.—For terms and full particulars, apply by letter, ALPHA, 6, Middlesex-place, Newroad.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform Railway Directors, Landed Proprietors, Noblemen, Gentlemen, and others, that they EXECUTE every description of professional work on the most reasonable terms. Railways, roads, water-works, &c. planed, surveyed, levelled, and completed. Engineering and architectural plans, sections, and designs, prepared and executed. Estates, manors, parishes, and townships surveyed and mapped. Land, timber, buildings, &c measured and valued.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform gentlemen desirous of acquiring a thorough practical knowledge of the profession, that they have refitted up their OFFICES with every requisite, including models and instruments of every description. The CLASSES are all remodelled and enlarged, embracing all the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING OFFICES. Established by Messrs. HYDE, SMITH, and LEWIS. Architects, Civil Engineers, Surveyors, &c. For preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing and Colouring, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c.—Terms One Guinea per Quarter. For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 349, Fleet-street, London.
These Pencils are prepared in various degrees of hardness and shades.

H H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

TO THE CLERGY, ARCHITECTS, and CHURCHWARDENS.—GILBERT J. FRENCH, BOLTON, Lancashire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., requires immediately to all inquiries addressed to him at Bolton, from which place only orders are executed. He respectfully invites direct communications, as by far the most economical and satisfactory arrangement. Parcels free at the principal Railway Stations.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, Levant House, St. Helen's-place, Bishopsgate; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO Wholesale Agents, 62, King William-street, City; JACK and BRADY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, North Castle-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints and undertake painting shops, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-merchants. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs T and S KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead in oil.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grinding appearance, but also by the debasement of that body in their produce, which is known to the painter to be all-essential That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK —LONDON— PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks) London.

WHITE OXIDE of ZINC and ZINC PAINT, (Langstone Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this innoxious substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under brand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Prices list and prospectus of its superior properties for interior, exterior, and marine purposes forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

FOR FENCING and all OUTSIDE WOOD or IRON-WORK.—WILSHERE and CO.'S WATER-PROOF BLACK VARNISH is the best article that can be used. One coat will go as far as two of ordinary paint. It bears a rich gloss. 4s. per gallon. 2, Talbot court, Gracechurch street.

Agent—14, St. David-street, Edinburgh.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccos dry quickly, and can be painted upon within a few hours.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PORTLAND CEMENT. 6, South Wharf, Paddington.

CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which it emanates by Public properties stamp RICHARDSON as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cements can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GILGRAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl street, Blackfriars, or Mill Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Roaher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works, situate near Bridgewater and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days —CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent, and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly surpasses them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Glibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and L'AP Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzie, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks and Blackwall, and sold at No. 7, Paddington-street, Baker-street, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Tyne and Medical, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Rond-sance Court and the roof of the Alhambra Court. The Pompeian roofs is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experience and long experiment; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s. 6d. Prepared only by W. J. STENT, Warminster London Agents Messrs J and G WALLIS, 64, Long acre. Agent for Ireland Mr S. BOYD, 36, Mary-street, Dublin.

TO BUILDERS CONTRACTORS AND OTHERS

HALKIN MOUNTAIN HYDRAULIC LIME and LIME-STONE SHIPPED at GREENFIELD WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper. Apply to Mr. S. BARLOW 2, Thavies-inn, Holborn (between 1 and 2 p.m.), or to Mr. H. R. BARLOW, Office for Patents, Dacie place, Ex change, Manchester.

MAW'S ENCAUSTIC TILE PAVEMENTS—A highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO Manufacturers of THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM

in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE GOTHIC, Crystal Palace (M. D. Wyatt, esq. in "Official Handbook"), send, free of expense, their pattern and price book. Benthall Works, Broseley, Salop.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 35s. per 1,000; Floor Bricks and 6-inch Pavings, at 40s. per 1,000; 8-inch Pavings, at 50s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

BRICKS.—From Kent-fields.—Grey stock, shipping, paviors, &c. of superior quality; also, white Suffolk, and red facings.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address Mr. WM. WEBB, Brick-fields, Stoke Newington.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick fields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington-butts.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Conu-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Flounders' Loam, White and Red House Sand, &c. &c. at the cheapest rate Chief Office, 27, Regent-street.

TO BUILDERS, CONTRACTORS, AND OTHERS

THE LONDON PATENT BRICK COMPANY are now prepared to enter into contracts for the supply of Bricks made by BURSTALL'S PATENT. Apply to JOHN A. S. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

TO BRICKMAKERS

THE LONDON PATENT BRICK COMPANY (Burstall's Patent) are now prepared to enter into arrangements for the USE of the MACHINES in the London district. The chief advantages of these machines (which may be seen in full operation at the Company's Works) are, the superior quality and economy of manufacture, the bricks (produced from dry clay) are conveyed at once from the machine to the kiln, and are ready for delivery in fourteen days after they are made, thus avoiding all the usual damage, delays, and expensive process of drying, &c.; the machinery and buildings occupy a very small space.—Terms and further particulars may be had on application to J. A. DUFF, at the Company's Offices, 8, Old Jewry.

TO BE SOLD, a BRICKLAYER'S BUSINESS, with the household furniture, scaffold-poles, &c. ten miles from London, where an industrious man who knows his business and will attend to it may insure an excellent living. It has been established a great many years, and the proprietor is leaving it from ill-health. Apply to MOSES ADAMS and SON, Auctioneers and Surveyors, Isleworth.

PAPER-HANGINGS.—R. HORNE, PAPER-HANGING MANUFACTURER, 41, Gracechurch-street City, invites builders and others to inspect his extensive stock of NEW DESIGNS in PAPER-HANGINGS, which, by the aid of powerful machinery, he is enabled to offer at the following prices, in stock quantities, for cash only, viz.:—

Stout lining paper	5d.	30 Pieces.
Superior ditto	6d. and 7d.	
Bed-room papers, in great variety	8d.	
An excellent oak paper	8d.	
Sitting-room ditto, on blended grounds	7d. to 9d.	
Hall-made marbles	9d. to 1s. 6d.	
Good satin papers	1s. 0d. to 2s. 0s.	
Flock papers	2s. 0d. to 2s. 6d.	
Hall-made granites	9d. to 1s. 0d.	

Every novelty in French and English panelled decoration always on hand; also excellent imitation of fancy woods.

N.B. Patterns sent into the country, by post, showing the style and quality of the above, on receipt of two stamps, and the goods despatched with promptitude on receipt of a remittance to the amount of the order given

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GILES'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment

GLASS PAPER and GLUE.—Important to CABINET MAKERS, P. J. DAY'S celebrated extra large Glass Paper, 1½d. per ream; Cox's finest Scotch Glue, 57l. per ton, 6½d. per cwt.; finest Imperial Glue, 53l. per ton, 6½d. per cwt.; best London Glue 48l. per ton, 4½d. per cwt. Russian, German, and Columbine Glues, in great variety. Wholesale at 1 Retail, and 7, New Inn-yard, Curtain-road, Shoreditch, London.—Country orders executed on receipt of a post office order, payable as above.

VICTORIA MARBLE
AND
STONE WORKS & SAWMILL,
Worcester Wharf, top of Severn-street,
BIRMINGHAM

JAMES BENNETT & SON,
Marble and Stone Merchants, Masons, &c.
MANUFACTURERS OF
MARBLE CHIMNEY PIECES
AND
STONE WORK BY MACHINERY:
MONUMENTS, TOMBS, &C.

N.B Wanted, several good Marble Masons. Constant employment and liberal wages given.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 39 and 40, Upper Belgrave place, Pimlico. Patronised by Her Majesty, Prince Albert, the nobility, architects of eminence, and honoured with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition.

TO CONTRACTORS, WHARFINGERS, AND LIGHTERMEN.

GRAVEL, HOGGEN, SAND, and CHALK of the best quality, to an unlimited extent, may be obtained at a moderate royalty on the river Lee, which communicates direct with the Regent's Canal without passing into the Thames. For particulars apply to Mr. JOHN GLASS, Enfield Lock, Middlesex.

*** The river Lee rates of tonnage upon the above, 3d. per ton.

MONEY LENT on PERSONAL SECURITY, LEASES, LIFE POLICIES, &c. Sums from 3l. to 5l. not required two or three days after application, for two years, or one year, or six months, repayable any day in the week, by weekly, monthly, or quarterly instalments, and good bills discounted. Charges moderate, and strict confidence observed. LONDON and PROVINCIAL LOAN and DISCOUNT COMPANY, Private Office, 69, Gower's-walk, London. Open daily from nine till eight, thus avoiding inconvenience or publicity.—Forms of application and prospectus gratis, on receipt of stamped envelope. H. FLEAK, Manager.

A THOUSAND YEARS.—MONEY LENT. BUILDING LAND TO BE LET, for the above term. Ground rents low. Charges moderate. Advances liberal. Apply to Mr. WILLIAM ELLISON, Architect and Surveyor, 19, Stamshy-road, Lanehouse.

This Day, Fourth and cheaper Edition, revised, 3s. 6d.

LECTURES on ASTRONOMY, delivered at King's College, London.
By HENRY MOSELEY, M.A. F.R.S. one of her Majesty's Inspectors of Schools.
By the same Author, Third Edition, 6s. 6d.
MECHANICS APPLIED TO THE ARTS.
London: JOHN W. PARKER and SON, West Strand.

A new Edition, in 8vo. price 10s. 6d.

HISTORY of the IRON TRADE, from the Earliest Records to the Present Period.
By HARRY SCRIVENOR, Liverpool, Author of "The Railways of the United Kingdom Statistically Considered."
London: LONGMAN, BROWN, GREEN, and LONGMANS.

PEOPLE'S EDITIONS.
This day is published,
I.
ALISON'S HISTORY of EUROPE.
Vol. VII. price Four Shillings, cloth, and Part XXV. price One Shilling. To be completed in Forty Four Parts, forming Twelve Volumes.
ALSO, to this edition of ALISON'S EUROPE. Part VI. price Two Shillings and Sixpence. To be completed in Twelve Parts.
II.
WORKS of SAMUEL WARREN, D.C.L.
Part XIV. price One Shilling.
III.
PROFESSOR JOHNSTON'S CHEMISTRY of COMMON LIFE. No XI. price 6d. containing THE SMELLS WE DESIRE, viz.:—Mineral Smells. Vegetable Smells. Smells from Decaying Substances. Smells produced by Chemical Art. Balsoulby. Smells produced by our Manufactories.
WILLIAM BLACKWOOD and SONS, Edinburgh and London.
Sold by all Booksellers

TO CARPENTERS, JOINERS, CABINETMAKERS, GILDERS, &c.
Just published, price 1s. 6d.; post free, twenty-four stamps,
THE CARPENTER'S, JOINER'S, CABINETMAKERS, and GILDER'S COMPANION, containing rules and instructions in the art of carpentry, joining, cabinet-making, veneering, inlaying, varnishing, polishing, dying and staining wood, ivory, &c. The best methods of preparing glue, cements, and compositions, and a variety of valuable receipts, with illustrations, showing the various methods of dovetailing, mortising, tenoning, &c. &c.
By P. REINNEL, Architect and Surveyor.
ELLIOT, 276, New Oxford-street; and all Booksellers in town and country.

THE PRACTICAL MECHANIC'S JOURNAL, Part 19. October; Price 1s. Illustrations: Two Large Copper Plate Engravings of Wright and Brown's Self Air-Heating Blast Furnace, and M'Connell's Marine Steam Engines and Boiler, and thirty Wood Engravings. Contents: Patent Law; Wright and Brown's Self Air-Heating Blast Furnace; Decimal Coinage; Steam Engines and Boilers for Screw Propulsion; M'Connell's Engines and Boilers; Nelson and Co.'s Direct-acting Screw Engines; Penn's Direct-acting Inclined Screw Engines; Galvanism as a Motive Power; American Notes by our own Correspondent; Illustrated Specifications of Recent Patents; Railway Brakes; Jennings' Mackerel-making Machinery; Johnson; Sheffield Bracket; Brown; Smoke-consuming Lamp; Johnson; Press-screws for cotton-spinning; Settle and Cooper; Paper-cutting Machine; Cox; Portable Bells; Muir; Railway Axle-boxes and Bearing Springs; Dixon; Moulds for Casting Metal; Jotson: Reviews of New Books; Monthly Notes; Lists of all new Patents.
HERBERT NEWTON, Office, London's Offices (Offices for Patents), 47, Lincoln's-Inn-Fields, London, and 166, Buchanan-street, Glasgow.

In fcp 8vo. with woodcuts, price 7s. 6d cloth,
PROFESSOR BRANDE'S LECTURES on the ARTS connected with ORGANIC CHEMISTRY, as APPLIED to MANUFACTURES, including Dyeing, Bleaching, Calico-printing, Sugar-manufacture, the Preservation of Wood, Tanning, &c. delivered before the Members of the Royal Institution.
Arranged by permission from the Lecturer's Notes by
J. SCOFFERN, M.B.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

MURRAY'S BRITISH CLASSICS.
Publishing Monthly, in Demy 8vo. Volumes.
On Sept. 30th, Vol. I. 8vo. 7s. 6d.
JOHNSON'S LIVES of the ENGLISH POETS, with Critical Observations on their Works.
Edited, with Corrective and Explanatory Notes, by PETER CUNNINGHAM, F.S.A.
To be completed in 3 Vols.
"Murray's British Classics, so edited and printed as to take the highest place in any library. Beyond all question the cheapest books of the day."—Critic
JOHN MURRAY, Albemarle street.

Now ready, price One Shilling (Vol. VII. Cabinet Series),
DIRT and PICTURES SEPARATED in the Works of the Old Painters.
By H. MERRIFIT.
London: HOLLYOAKE and CO. 147, Fleet-street.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VII. for July, just published
GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST END DEPOT, for Yorkshire Paving, Forth and Bolt Stone, Bangor Slates, Slab, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Timber of all kinds. WORKS and Land Agent of Bricks, Mortars, and others, to their Seats in the country, will be charged at the lowest prices. Headstones, Tablets, Kerbs, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and personally on the Block Knoll, in order to make the choicest pieces of Statuary, begs to call the attention connected with the Metropolis that he has a Show-room for the display of extensive stock of Statuary, Veined and Plain Paper, and Block and Gothic Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, at the foot of Vauxhall Bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the above premises to Nos. 9 and 10, Carrara Wharf, Pimlico, the Proprietorship of Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the retail trade as heretofore, and that Mr. Thompson, being no longer engaged with Mr. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better rates and quicker time than any others.

N.B The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout Italy, England, and America.

THE MARBLE WHARF, Thames Bank, Pimlico adjoining Vauxhall Bridge.—PHILPSON and HOMMIS, Slate, Stone and Stove Dealers, Builders, Contractors, and Builders' Agents. Every description of English, Foreign, and Scotch Marbles, Stone for Offices, Counter and Shop Fronts, Paving, Landings, Steps, Hearths, Chimney Pieces, Tombs, Tablets, Monuments, Headstones, Kerbs

The Builder.

SATURDAY, SEPTEMBER 30, 1854.

AS SCHOOLS increase in number and efficiency, the necessity for prisons, hospitals, and workhouses will become less. This is surely worth thinking about.

The late Educational Exhibition, under the auspices of the Society of Arts, will, we have no doubt, advance the cause of education, both by the impetus given through the medium of the lecture-room, and by affording a knowledge at once of what we have, and what we want in educational equipment. All such opportunities of *collating* information are valuable in the highest degree: they bring before the eyes of the teacher all the varieties of machinery contrived to aid him in his task, and by such comparison enable him to ascertain how and where he may best expend the scanty funds at his disposal, as well as select the works most suitable for his peculiar case. More especially would this hold true if the collection were a permanent one, always accessible, properly catalogued, and arranged in such a manner that space could be obtained for the thorough examination of articles exhibited. Therefore, we heartily concur in the suggestion made for rendering this primary effort the nucleus of a regular Educational Museum. It is to be hoped that the exertion which the Society is at present making to this end will be so seconded as to ensure its success. One thing, however, we hold to be a *sine qua non:* exhibitors must have a pledge that their contributions shall be deposited where they will be readily seen. It is not gracious to hint very strongly at the deficiencies which characterized the rudimentary step, but certainly many of those who came forward to carry it through complain, and with some reason, of the inadequate accommodation. The booksellers especially suffered. Then, one of the most interesting departments in the whole room, we venture to say, remained sealed to nine-tenths of the visitors. We hear and read a great deal of art-education on the Continent, and the French contributions to this Exhibition would have read our schoolmasters a useful lesson if they had been there. But they were entombed, we are told, in a bundle of portfolios, some of them stowed away behind sundry incumbrances, or buried beneath others.

Those few who had the courage or patience to excavate these specimens, would ascertain by the officially-attested copies of drawings by boys and girls, from eleven to fourteen years of age, how far our Department of Art must yet advance before it will put the youth of Great Britain on a par in this respect with their new allies across the Channel.

Other departments, too, there were of paramount interest, which the confined space circumscribed in usefulness. If a suitable repository can be guaranteed for the future, there is no doubt but that exhibitors have sufficient evidence that it would very soon be a *paying* step to present their wares to the Educational Museum.

In connection with that first and indispensable part of educational apparatus which falls within our special range, we purpose taking a glance at the history and condition of school architecture in the "States," and the gradation of educational machinery there, to which our attention is called by a new Epitome of Mr. Barnard's work on "School Architecture," &c. recently issued.*

* "Practical Illustrations of the Principles of School Architecture." By Henry Barnard, Superintendent of the Common Schools in Connecticut. New York: C. B. Norton. London: Trubner and Co. 1854.

It is now a question asked with reference to almost every great subject,—"How are they managing these things in America?" The few memoranda which we digest from Mr. Barnard's work, are collected purely as notes of American progress in this direction. They may afford some useful hints to us by the way. But our present purpose is not to enter into a comparison of the respective excellence of school architecture in the two countries. Our columns are, from time to time, the repository of the system at home: let the American superintendent tell, so far as our memoranda of his own facts and language will allow, how far the two countries agree, or how much they differ. To those practically acquainted with the subject, as most of our readers are, these brief selections will be sufficient.

Of the great Transatlantic cities, Boston is one of the best supplied with schools. They are her boast and pride. In 1848, after a variety of experiments in school architecture, the Quincy Grammar School-house was opened, and their mayor, Quincy, had the courage to utter the following noble sentiments. Perhaps not many chief magistrates could or would declare their sentiments in a similar manner. It is a test wherewith earnest, enthusiastic men may stir up more sluggish spirits, and as such we gather a few lines:—

As chairman of the "City Fathers," he did not hesitate to stand there and tell the paying community that they had in this manner just expended 200,000 dollars of their money; and he was confident the question would not be asked, why spend so much? Why spend more for popular education in the city of Boston, than is expended in the whole of Great Britain? [*Query*. What was the worthy mayor's exact meaning here? Is it not a flower of rhetoric?]

He said, if but once in a century a little being should be sent into this world, of most delicate and beautiful structure, and we were told that a wonderful principle pervaded every part of it, capable of unlimited expression and happiness, capable of being fitted to associate with angels, and becoming the friend of God; or if it should reveal a wrong bias, of growing up in enmity against him, and incurring everlasting misery; could any expense of education which would contribute to save from such misery and elevate to such happiness, be too much? But, instead of one such little being, 24,000 were now entrusted to the care of the "City Fathers," and their education in this world will determine their future destiny,—of companionship with angels, or with the degraded wretched enemies of God.

If the community had no responsibility in the matter, how, he asked, could it spend money better than in educating these children? But they would soon control the affairs of Boston, and, to a great extent, of the commonwealth. Nor would their influence stop here. "No man liveth for himself." Each of these children would form a centre of widening influence, whose circumference might yet embrace millions of minds, and extend through unnumbered centuries.

There, unlike other countries, every restraint to individual elevation is thrown off. All have the most perfect liberty that can be enjoyed, without infringing upon the rights of others. How important, then, that such child should be educated to understand his rights, and the principles and habits of *self-government*.

We are all, said he, in a partnership, and if one of these little partners suffers in his character, the whole community suffer in consequence.

He believed that nearly half of the 400 boys in that school were not Americans. Many of their parents were not fitted for the duties of a republic. But these children, educated side by side with their own, would learn self-government, and be trained to become worthy citizens of that free country.

It seemed, he said, the design of Providence to mix races; and the influx of foreigners might constitute the very elements necessary to give to American character its highest excellence. Standing on such a moral elevation as Boston did, they felt it a duty to provide for the education of all, and thus present to the whole country *models* of popular education.

The men who feel and act thus cannot be destitute of a school system of architecture deserving our attention. The history of its rise and progress in that great country is interesting. The subject is almost a new one with them. Until very recently, our author tells us, it had not received that attention from the public generally, or from practical educators in particular, which its important bearing, direct and indirect, on the health, manners, morals, and intellectual progress of the children, and on the health and success of the teacher, both in government and instruction, demand. Until 1829 we find no public document on the subject. In 1830, Mr. Adams, of New York, delivered a lecture before the American Institute of Instruction, "On School Houses and School Apparatus." Stimulated by that lecture, the directors of the Institute in the following year offered a premium for the best "Essay on the Construction of School-houses." This was gained by Dr. W. A. Alcott, and his prize essay was widely circulated. In 1833, the Essex County Teachers' Association published a "Report on School-houses," prepared by the Rev. G. B. Perry. This was a thorough and vigorous exposure of the evils resulting from the defective construction and arrangements of school-houses; and after this date public attention was fairly aroused,—improvements were made in the construction and furniture of school-rooms, especially in large cities and villages.

In 1838, the secretary of the Board of Education in Massachusetts, the Hon. Horace Mann, submitted an elaborate report on the subject, in which it was handled with great ability, and the important question of ventilation discussed. It was widely disseminated, and gave an impulse to the matter throughout the States. In 1838, the Hon. Henry Barnard (the author with whom we are now dealing, and then secretary to the commissioners of schools), prepared an essay on school architecture, in which was embodied the results of much observation, experience, and reflection, adapted, from its systematic and practical nature, for the guidance of those who had occasion to superintend the erection, alteration, or furnishing of school-houses. This treatise, printed in 1841, was, in 1842, submitted to the Legislature. It may be mentioned, "as an evidence of the low appreciation in which the whole subject was regarded at that time, in a State which prides herself on the condition of her common schools, and on the liberality with which her system of public education is endowed, that the joint Standing Committee on Education, on the part of the Senate and House, refused to recommend the publication of the essay, although it is by far the most complete which has appeared either in Europe or America. And it was only through the strenuous efforts of a few intelligent friends of school improvement that its publication was secured." More than 100,000 copies of that essay have since been distributed.

In 1842, some practical views on the subject of the "School-house" were drawn up by Mr. G. B. Emerson. A copy of this work was presented to each of the 11,000 school districts in the State of New York, and each of the 3,400 districts in Massachusetts. In 1848, and again in the present year, Mr. Barnard republished his essay, embodying various plans and features of importance, which subsequent writers had drawn up or explained. The work now before us is a revised summary of the large treatise.

When Mr. Barnard began his labours in the field of education, everything in connection with the subject was forced upon his attention in a disagreeable way. That experience we shall present in his own words, as it is a good epitome of those general views on school architecture which it is imperative that the architect should at every step bear in mind:—"Go where he would, in city or country, he encountered the district school-house, standing in disgraceful contrast with every other structure designed for public or domestic use. Its location, construction, furniture, and arrangements, seemed intended to hinder, and not to promote—to defeat, and not to perfect, the work which was to be carried on within and without its walls. The attention of parents and school-officers was early and earnestly called to the close connection between a good school-house and a good school, and to the great principle, that to make an edifice good for school purposes, it should be built for children at school, and their teachers; for children differing in age, sex, size, and studies, and therefore requiring different accommodations; for children engaged sometimes in study and sometimes in recitations; for children whose health and success in study require that they shall be frequently, and every day, in the open air, for exercise and recreation, and at all times supplied with pure air to breathe; for children who are to occupy it in the hot days of summer and the cold days of winter, and to occupy it for periods in different parts of the day in positions which become wearisome, if the seats are not in all respects comfortable, and which may affect symmetry of form and length of life, if the construction and relative heights of the seats and desks are not properly attended to; for children whose manners and morals,—whose habits of order, cleanliness, and punctuality,—whose temper, love of study and of the school, are in no inconsiderable degree affected by the attractive or repulsive location and appearance, the inexpensive outdoor arrangements, and the internal construction of the place where they spend, or should spend, a large part of the most impressible period of their lives. This place, too, it should be borne in mind, is to be occupied by a teacher whose own health and daily happiness are affected by most of the various circumstances above alluded to, and whose best plans of order, classification, discipline, and recitation, may be utterly baffled, or greatly promoted, by the manner in which the school-house may be located, lighted, warmed, ventilated, and seated."

According to the American system, school-houses of one room are generally intended either for DISTRICT or PRIMARY schools.

By a District School is understood a public school, open to all the children of the district, of both sexes, and of that age which the practice of the district, or any special regulation ordained by the local authorities, may fix. There are formidable difficulties presented to the architect in attempting to furnish an edifice of this kind, especially considering the very slight expense which is generally regarded as sufficient for the purpose. The school is an unclassified one, superintended by a single teacher, without even the aid of older pupils. Then it varies according to the season, in the number and age of the children, and, as a consequence, in the method of instruction. In summer, there are the younger children, who demand elementary instruction; and in winter, are found older ones, who require more advanced studies. This irregularity of age and attendance, renders it difficult to arrange seats and desks. Great physical suffering is often the result of crowding both classes of scholars into one small apartment. The plan is either to design the building for the maximum members of each class at any particular season, or, if this is impossible, then, in winter, the seats and desks of the smaller children ought to be removed to the attics, to give greater space for those of the elders, and in summer, a contrary arrangement to take place.

By a Primary School, is understood specifically, that class or grade of schools which receive only the youngest pupils, and those least advanced in their studies; in other words, an infant school. This very important class of educational institutions is peculiarly valuable in all cities, manufacturing villages, and large neighbourhoods. It is amongst the population of such places that parents are sure to be found, who, for want of intelligence or leisure, "of constancy or patience, are unfitted to watch the first blossoming of the souls of their children, and to train them to good physical habits and virtuous impulses, to cleanliness, obedience, openness, mutual kindliness, piety, and all the virtues which wise and far-seeing parents desire for their offspring. The general result of the training of the children of such parents, is the neglect of all moral culture where such culture is most valuable; and the acquisition of manners, personal habits, and language, which the best training at a later period can with difficulty eradicate." From such malign influences, the earlier the children are withdrawn, the better for their welfare and the good of society. To meet this want, the labours of Oberlin and Wilderspin were directed. We have neither space, nor is it our province, to enter upon the very interesting arrangements which, whether it be by furniture or apparatus, or in playground and schoolroom, are so carefully matured, in order that such schools, in the hands of a good teacher, may be taught properly "to regulate the hours of play and study, so as to give variety, vivacity, and interest to all the exercises, without over-exciting the nervous system, or overtasking any faculty of body or mind; to train boys and girls to mild dispositions, graceful and respectful manners, and unquestioning obedience; to preserve and quicken a tenderness and sensibility of conscience, as the instinctive monitor of the approach of wrong; to cultivate the senses and habits of quick and accurate observation and discrimination, to prevent the formation of artificial and sing-song tones; to teach the use of the voice, and of simple, ready, and correct language,—and beginning in this way, and by appropriate exercises in drawing, calculation, and lessons on the properties and classification of objects, to cultivate the intellectual faculties."

But we shall note the principles which they lay down for guidance in the design of such buildings, and quote a few of the features which distinguish those in existence. Our own Committee of Council on Education have framed some minutes on the organization of schools. With these we are familiar, and in most essential points the recommendations given by heads of departments in America agree. As regards the choice of a site, however, our Transatlantic friends, with their greater "land privileges," are more liberal. Mr. Barnard says, select "a location healthy, accessible from all parts of the district; retired from the dust, noise, and danger of the highway; attractive from its choice of sun and shade, and commanding, in one or more directions, the cheap yet priceless educating influences of fine scenery." Mr. George B. Emerson, the president of the American Institute of Instruction, desires that "when the laws of health and the dictates of taste may be consulted, the schools shall be placed on firm ground, on the southern declivity of a gently sloping hill, open to the south-west, from which quarter come the pleasantest winds in summer, and protected on the north-east by the top of the hill, or by a thick wood." We may scarcely follow Mr. Emerson into those features of landscape gardening with which he would environ the school-room. In the "far west" there may be room for such elegancies, but here we are forced in general to rest content with much more moderate accommodation. Instead of the trees, the shrubs, and the evergreens with which the president would gratify the eye, and educate the taste of the young, they are here too often hemmed in by dismal houses, or sometimes penned up in a vault, room, dungeon, or whatever it may be called, beneath a church. It is in Scotland, we believe, that these latter cases are most frequently to be met with; and whatever can be said on the subject by some on the score of economy, they are exquisitely painful to behold.

Mr. Emerson remarks that, in point of size, the room should be sufficiently large to allow every pupil, first, to sit comfortably at his desk; secondly, to leave it without disturbing any one else; thirdly, to see explanations on his lessons, and to write without being incommoded by or incommoding others; fourthly, to breathe a wholesome atmosphere. If the three first objects are fully provided for, the space on the floor will be sufficient. But to secure this advantage of an adequate supply of air, the room must not be less than 10, and if possible, 12 or 14 feet high.

Arrangement.—In the accommodation of fifty-six scholars, so as to give ample room for moving, for recitations, and for air, the dimensions of the house should be 33 feet by 25 feet, and 10 feet in height. This will allow an entry of 14 feet by 7½ feet, lighted by a window, to be furnished with wooden pegs for the accommodation of clothes; a wood-room, 10 feet by 7½ feet, to serve also as an entry for girls at recess, or as a recitation-room; a space behind the desks 8 feet wide for fireplace, passage, and recitations with permanent seats against the wall 10 or 11 inches wide; a platform, 7 feet wide, for the teacher, with the library, black boards, globes and other apparatus for teaching, the remaining space to be occupied by the desks and seats of the scholars. For every additional eight scholars the room may be lengthened 2½ feet. The desks and seats for scholars should be of different dimensions. A desk for two may be 3½ or 4 feet long. If the younger children are placed nearest the master's desk, the desks in the front range may be 13 inches wide, the two next 14 inches, the two next 15 inches, and the two most remote 16 inches, with the height respectively of 24, 25, 26, and 27 inches. The seats should vary in like manner: those in the front range should be 10 inches wide, in the two next 10½ inches, in the two next 11 inches, in the two last 11½ or 12 inches, and 13½, 14, 15, and 16 inches respectively high. All edges and corners are to be carefully rounded.

It is very desirable that the *north* end of the school-house be occupied by the master's desk; that this end be a dead wall; that the front be towards the south, and that the desks be so placed that the pupils, as they sit at them, shall look towards the north. The advantages of this arrangement are—1. That the scholars will obtain more correct ideas upon the elements of geography, as all maps suppose the reader to be looking northward; 2. The north wall having no windows, will exclude the severest cold of winter; 3. The scholars will, in this case, look towards a dead wall, and thus avoid the great evil of facing a glare of light; or if a window or two be allowed in the north wall, the light coming from that quarter is less vivid, and therefore less dangerous than that which comes from any other; 4. The door, being on the south, will open towards the winds which prevail in summer, and *from* the cold winds of winter.

The suggestion here made as to the arrangement of desks for the purpose of inculcating correct ideas on geography is a good one, and by no means to be overlooked when it can be conveniently made.

Mr. Barnard, in his ninth and tenth general principles, lays down the following rules concerning the desk and seat:—"A desk with at least 2 feet of top surface, and in no case for more than two pupils, widened toward the front edge 1 inch in a foot, except 2 to 3 inches of the most distant portion, which should be level—covered with cloth to prevent noise—fitted with an ink-pot (supplied with a lid and a pencil-wiper) and a slate, with a pencil-holder and a sponge attached—supported by end-pieces and stanchions, curved so as to be convenient for sweeping, and to admit of easy access to the seat—and of varying heights for small and large pupils, the front edge of each desk being from 6 to 9 inches (7 for the lowest and 9 for the highest) higher than the front edge of the seat or chair attached.

A chair or bench for each pupil, and in no case for more than two, unless separated by an aisle, with a seat hollowed like an ordinary chair, and varying in height from 10 to 17 inches from the outer edge to the floor, so that each pupil, when properly seated, can rest his feet on the floor without the muscles of the thigh pressing hard upon the front edge of the seat, and with a support for the muscles of the back, rising above the shoulder-blades.

We observe that in the description of the school-house in Windsor (Conn.), each pupil is provided with a desk and seat, the front of the former constituting the back or support of the latter, which slopes $2\frac{1}{2}$ in 16. The seat also inclines a little from the edge. The seats vary in height from $9\frac{1}{2}$ inches to 17, the youngest children occupying those nearest the platform. The desks are 2 feet long by 18 inches wide, with a shelf beneath for books, and a groove on the back side to receive a slate, with which each desk is furnished by the district."

In the district school-house of Centremill the smoke-pipe is carried up between the ventilating-flues, and the top of the chimney is finished so as to accommodate the bell.

In an ensuing article we shall enter into a few details connected with one or two of the best school-houses which have been recently erected in cities and large villages, especially those of higher class, in New York, Boston, and Philadelphia — High-schools, Grammar-schools, and others.

The multiplication and improvement of our schools is a practical point for the operations of all who are anxious to aid in advancing society and elevating the human race.

ON COLOUR AND ITS USE IN ARCHITECTURAL ART.*

Let us now say a few words on the colour 'red," the central colour of the prism. Of all colours, it is the most positive, and has the middle station of the primaries. Black and white are the negative colours, and occupy the extremes of the scale. Red contrasts and harmonizes well both with black and white.

The anecdote of the blind man, related by Locke, who compared the colour "scarlet" to the sound of a trumpet, proves that he had no bad conception of its analogies and nature. We have here one of those coincidences which seem forcibly to point to the connection between all our senses, and to show that between just proportions of form, just harmonies of sound, and harmonies of colour, there is a common and all-pervading law, which not merely settles their various relationships, but reveals the identity of their origin.

And here I cannot but touch upon another of those resemblances or analogies which, even on his subject of colour, reminds me of the constitution of our human wills and affections. Red, of all colours, is undoubtedly the most beautiful; but by that just law which decrees that in proportion as the privileges of each are great, so are his dangers,—the colour which is most lovely in its tender bloom, becomes horrible, and even frightful in its excess. The great secret why, in our modern painted glass the reds are so poor, is, that we employ such large quantities of it, and that our glass-stainers, being men for the most part ignorant of the true principles of colour, have imagined that in order to make a brilliant window, little more is necessary than to use an abundance of gaudy red,—the reverse being far nearer the truth, viz. the smaller the brightest bits of colour are, and the more they are counterpoised by large masses of carefully arranged neutral tones, the more likely are we to attain that sober splendour, that subdued brilliancy, which is the great desideratum in all colouring.

Nature, in this, as in all other points, should be our great mistress; and a diligent observation, not merely of her laws, but even, if I may so say, of her whims and fancies, her "quips and quirks," as Milton so prettily terms them, will fully repay the attentive student. If young men, instead of turning to the meretricious smiles of Fashion,—a mere coquette as she is,—would reverently woo and honour honest and ingenuous dame Nature, the fairest of maidens, and when once won, the truest of wives, they never would have reason, as artists, to regret the virtuous, the blessed self-denial of their youth.

Where does Nature scatter red? Is it not in her jewels with their bright setting of green and gold? Is it not in floreal pastures and trim gardens?—not merely in the poppy or the tulip, or even in the rose, but more beautifully, perhaps, even lower down in the scale—in the wood-strawberry or the rim of the humble daisy. Ever most beautiful when most delicate—in the blush of the infant, or the hectic colour which betokens an early flight to mansions of pure bliss.

Scarlet is a royal colour, and it is a glorious sight to see a regiment of British soldiers winding through a vale well timbered, or with their bayonets gleaming in the sun about to encounter the shock of arms; but these beauties are not equal to the former,—to the tender hues, for instance, of the rose-bud, or the cherry lip of innocence, or the pink tips of Aurora's fingers.

Red, again, is mentioned in Scripture as ornamenting both the Tabernacle and the Temple; but it will always be observed in very minute quantities, and associated with purple and gold. No modest woman, for example, if she have good taste, will like to appear in a scarlet dress. Here and there bits of red may appear,—roses in the hair, a red drapery over the shoulders, or a ribbon, but never too much of it, it being, as before observed, the most precious in quality, but the most perilous of all the primaries to employ. The horror which, where much blood is spilt, necessarily arises in most men's minds, may have been a providential arrangement for mitigating the ferocious passions of our sinful nature.

The ancients, as Field observes, beautifully and expressively represented the goddess "Spes," or Hope, with an opening rose-bud in her hand. This therefore, is the emblem of hope; and as destiny is veiled with hope, so, according to Catullus, the destinies wore rose-coloured veils tied with white.

Lord Lindsay has, in his work on Christian Art, a very eloquent passage on this same flower, the rose, which I cannot but indulge myself in quoting. He, indeed, has no particular reference to the colour of the flower, though it will be observed, that by a fair extension of its meaning it is not inapplicable to the subject of our lecture.

"An interesting work might," he observes, "be written on the symbolism and legendary history of mute nature—mute, but animated, of flowers, plants, and trees—a subject, however, associating itself, only in a minor and collateral degree, with Christian art. It forms, in fact, a department by itself, distinct alike from art and poetry, strictly so called, and well worthy of exploration. And this exploration should be a comprehensive one, including the symbolism of the ancients, and of the extra European world, and Christendom need not shrink from the comparison. In nothing, indeed, is her superiority more manifest. The rose, for instance, the flower of Venus, blushing with the blood of Adonis, the darling of the Graces, the symbol of worldly pleasure, and of the frailty of life, too brief for its enjoyment.

> Pluck we the rose at smiling morn,
> Soon to perish with the day;
> Pluck the fair rose of love, nor scorn
> To taste sweet love while yet we may.

What is it but a weed in comparison with the rose of Christendom? the type of the freshness of maiden purity, that sprang up out of persecution, when the holy maiden of Bethlehem, 'blamed with wrong and sclaundered withe [evil],' as narrated by Mandeville, 'was domed to the dethe, and as the fyre began to brenne about hire, sche made hire preyers to oure Lord, that, as sche was not gylty of that synne, that he wold helpe hire, and make it to be knouen to alle men of his mercyfulle grace. And whan sche hade thus seyd, anon was the fyre quenched and oute; and the brendes that weren brennen becomen red roseres, and the brendes that weren not kindled becomen white roseres, fulle of roses. And these were the first roseres and roses, both white and red, that ever ony man saughe, and thus was this maiden saved by the grace of God.' And this," adds Lord Lindsay, with his own peculiar and beautiful enthusiasm, "is but one among many Christian legends of the rose, once the theme of universal song, sweeter far than that which hushed the very breeze into attention in the gardens of Armida."

No legend, perhaps, is more beautiful, no idea more poetic, than that of Dante, the great mediæval intellect, who represents in his Paradise the whole company of the redeemed, both men and angels, clustered in the form of a full-blown rose about the throne of their Redeemer; their countenances of pure flame, their wings of purest gold, and their robes of virgin white, "singing praises to Him who sitteth upon the throne, and to the Lamb for ever and ever."

I have thus run over hastily some of the characteristics which mark most prominently the three primitive colours, the glorious Trinity, if I may so speak without irreverence, into which the primal ray—the type and emblem of the Deity—is divided. Nothing, perhaps, is more remarkable, than the mode in which these colours act and react upon each other. A colour is no longer the same when in association with another. Red seen by the side of blue is modified into purple; by the side of yellow into orange. Just in the same way the orange tints of the setting sun darken the foliage, which becomes of a bluish green; while the fields, which erst were dusty in the glare of day, assume a deep and beautiful russet below the hanging woods. Thus in sunsets. But in each scene of nature it is the same. We can no more judge of colours than of objects, without regard to their relation and position. What a long perspective into the glories of creation does this open out. Each object of faith, like each object of sight, beautiful as it is for us, can only be fully appreciated when seen in due subordination to the other features of the universal scheme of Providence. The rainbow alone, in its true totality, can give us the true notion of the beauty of colour.

In carrying on this subject, it is impossible not to admire a beautiful symbolism in the fact, that the eye resting upon any colour, say scarlet, for a while—a few minutes, perhaps—upon being closed presents green to our mind's eye. Any one may try the experiment for himself. Have we not here a lesson never to tax our mental energies too hard in one particular direction? Is the glare of the sun too powerful?—we seek the shade. Are the nights too long?—we revel in the scanty portion of sunshine left to us. "Neque semper arcum tendit Apollo," is a lesson which all nature teaches us, and which is by no means left to the moralist or philosopher alone.

It would be beyond the limits of a short discourse to put down a long description of the secondary and tertiary colours, though much might be learnt from such study. I can simply call your attention to them with this remark, that from their extensive prevalence in nature, it is to them and not to the primaries that our chief attention as colourists should be given. True it is, that the primaries are those from which all other colours flow; and with a per-

* See page 497, ante.

fectly good blue, a good yellow, and a good red, there is no combination which might not be successfully undertaken; but they are seldom used alone, except in minute quantities. To illustrate this, let any one take half a sheet of paper, and colour it blue, yellow, or red, or black or white. If he takes it into the open air, and places it in juxtaposition with some object he has been accustomed to call black or white, or yellow or red, or blue, he will be astonished at its intensity. Try, for instance, a sheet of common letterpaper against the stem of a birch-tree which we are accustomed to look at as one of the whitest things in a natural landscape. The difference is very great. An exception should perhaps be made of yellow, which, from its affinity to light, is not so well seen in the open air as in houses.

Leaving, then, untouched the interesting question of the secondary and tertiary colours, a few practical hints upon colour in general may serve to conclude this short discourse. The art of polychrome will not prosper among us until we bestow a more diligent attention first upon nature (and that after no cursory manner, but in the spirit of philosophic experiment), and then upon the ancient masters. I fear it may be said that as colourists we have gone back since the days of Reynolds. Englishmen, I am disposed to believe, have a good eye for colour: Gainsborough, and Reynolds himself, among figure painters, Wilson and Bonnington, but above all, Turner, are examples. With the improvement that has taken place in general design and the higher branches of art during the last ten years, it has been my lot to observe no *great* improvement in colouring. A scrupulous and careful handling of the figure has been attained in some cases, by a sacrifice of that transparency in which Reynolds was hardly second to Rembrandt himself. A vigorous "impasto" has been gained, but we are painfully reminded that white and pink paint do not make flesh like Titian's.

Some of our greatest artists have of late years, in my judgment, been obnoxious to this criticism of hardness, and the fashion of the day—gaudiness and want of depth—having taken root among our painters, has unhappily extended with still more pernicious effect into our buildings. Go where we will we find no repose.

I will venture to give an instance of this, in an apartment which perhaps, as a display of gorgeous colour, has not been surpassed by any building of later than Mediæval date: I allude to the House of Lords. Some years ago, when that grand edifice was first opened to public use, there was only one fresco in it, by Dyce: two recesses were fitted up for the future reception of other paintings in fresco: over them hung a quiet crimson drapery,—forming a delightful resting-place for the eye,—a little bit of blank, as it were, on which we could repose after being filled with wonder and admiration at the beauty of the ceiling and gilded fretwork,—so gorgeous as almost to recall to mind the description of the Temple in the Bible.

These two recesses, as affording what we wanted, were most valuable, but unfortunately it had been determined to fill them with paintings. The consequence could hardly have been anticipated. The quiet crimson draperies removed, two beautiful works, of which it is impossible to speak too highly in themselves, were inserted. What was the consequence? The eye, instead of being gratified by the *coup d'œil*, became teased and worried by the *embarras de richesses* set before it. The spectacle became what a dinner would be if it were all dessert, or a gown if it were all made up of flounces. We must not strive for universal brightness, but for brightness in the *right spot*, spreading, as it were, a subdued lustre over the whole prospect of our vision.

There are few rooms in London to which appeal can be made as good examples of taste in colouring. It is only of late years that polychrome has been introduced into our churches, and the general absence both of pictures and marbles in them places us in this respect at an immense disadvantage with regard to our continental neighbours. The great staircase at Stafford-house, a noble monument to Philip Wyatt, the architect, is nearly the best example of colour London affords. The scarlet carpet with which the base is covered, is too large and gaudy, and might be with advantage changed for a pavement of encaustic tiles. The general disposition of colour is good. Yellow scagliola forms the principal element, while grey and reddish scagliola diminish its extreme warmth. Besides this, on the wall opposite the entrance, hang three large copies of Veronese, which, while they afford points of interest, give by the predominance of blue which they exhibit, a sort of outlet to the eye, and harmonize the whole. The Banqueting-house at Whitehall is also worthy of a visit, from the glory of its ceiling, which is by Rubens, and deserves the attentive study of the colourists. The frames in the ceiling are of black and gold, and look well.

In churches, viewed as specimens of colour, we have literally nothing. The Temple Church and the new church, All Saints', in Margaret-street, are the best examples we can produce. The latter bids fair to do honour to the architect, though I am sorry to add, not altogether free from gaudiness. To this the large mass of brickwork, of a deep red, which is let into the walls, probably adds. A great want to my mind is apparent, from the total absence, or almost total absence, of a warm grey, which is after all as good a ground as we have for the display of bright colours, and which being the natural colour of stone, is much missed by the eye in those buildings which have it not. In our search after polychrome, do not let us forget that stone and marble are in themselves beautifully coloured objects, for the loss of which no brilliancy of decoration can atone. In connection with this part of the subject, I had proposed to myself to make a few remarks on the taste, or want of taste, whichever it be, which is exhibited in the highly coloured decorations of the people's palace at Sydenham. Time, however, fails me, and the subject in itself is sufficient for an essay.

Before, however, concluding, I cannot but add a few words on those laudable attempts at giving external colour to our buildings which the streets of London begin to exhibit. It is a sad thing to speak unwelcome truths, but, with a few notable exceptions, such as Westminster Abbey, St. Paul's, the new Houses of Parliament, the characteristic of the streets of this great city is meanness. I see no chance of improvement, except it be by the revival or improvement of our street architecture. The word revival I use advisedly, for, surely, the old timber houses of the Middle Ages were far more picturesque than those of the present day: properly adapted to modern uses, with plate-glass lights, instead of leaded lights, they form no inappropriate type of the kind of building we might adopt. I allude to their form, rather than to their materials, and I rejoice to see so good a beginning made in this direction by Mr. Gilbert Scott.

If, however, the revival of our street style of architecture is to be popular, we must have, especially in a climate so murky as ours, not merely form but colour. London, let me remind you, is a brick town, and few architects have yet shown what may be done with bricks. I am not clear that even the dirty yellow brick, which is the common material of our dullest and dingiest streets, might not, if worked up into noble outlines, and embellished by mouldings and ornamentation of red or some richer colour of bricks, produce buildings, which, if they did not come up to stone, would, at least, be in better taste than those stucco-faced mansions which fill the ample squares and broad streets of Belgravia.

In the buildings of higher pretension no more beautiful introduction can be imagined than Aberdeen granite. Of this Mr. Hope's house in Piccadilly affords an example which I should be glad to see followed, although I do not admire that mansion as a whole. Mr. Daniell, the china manufacturer, of Bond-street, deserves thanks for showing us that encaustic tiles are well fitted, not merely for internal decoration, but also for the external ornamentation of balconies and houses. In the hands of a skilful architect such a hint might be turned to account.

To conclude: I remember hearing of a passage in some old divine who was recommending the congregation to attend to the pious practice o listening to the preacher when expounding the Scriptures from the pulpit. "All, however, cannot be gifted with eloquence," and in such case the old-fashioned preacher quaintly remarks, "God takes up the word and preaches patience." Now eloquence, in many points, is not unlike colouring: it requires the same play of light and shade, the same variation in tone that colour does; and, like the preacher, the colourist has a powerful assistant in reserve. Old time comes in and corrects, if not all, at least many of our mistakes, and modifies, though nothing perhaps can quite neutralize, the mistakes of thoughtless and untasteful men. When man has done his worst, nature takes up the paint-brush and helps us to restore that perfect harmony which after all, is only her own.

Sir Walter James remarked at the outset of his lecture, that it did not attempt to aim at scientific accuracy, but might simply be regarded as a few scattered remarks upon the subject of colour, which experience and reading had enabled him to throw into the form of a lecture.

MODERN THEORIES OF ARCHITECTURAL TASTE.

The classes of architecture and construction at University College for the session 1854-5 will commence on Friday, the 19th October. I venture on this occasion to exercise the privilege of which I have hitherto occasionally availed myself, to offer a few general remarks upon different theories now afloat on the public mind respecting architectural taste and architectural education.

At this time there are various classes of writers, not professional men, nor aware of the sober, stern realities of professional life, who assume great authority on the subject, and seek to control the studies and direct the taste of the rising generation. Every attempt is made to throw discredit on classical art altogether although, with the exception of religious buildings, it is the style most generally prevalent. Some urge as heterodox the use of any but what is called "Christian art." Many would confine it exclusively to the earlier periods of the Pointed style. There are some who, with graceful and earnest eloquence, and carried away by the enthusiasm of excited feelings and a fals sentimentality, would lead us back to the exclusive adoption of a spurious mediævalism, to picturesque or scenic architecture, like that of Venice, which preceded the times of Palladio Sansovino, and Scammozzi. Those who prais the Palazzo del Doge, or the basilica of St Marco, are silent as to the grandeur of the Liberia, or the stupendous nobility of the basilica of Vicenza; and Brunelleschi, Bramante Vignola, Inigo Jones and Wren are ignored the principles of sound construction and pure taste are set at defiance, and the mind of the student is directed more to the study of the ornamental, as the detail of a capital, a leaf or a flower, than to the proportion and expression and character of entire edifices. The architect is expected to design the picturesque, rather than to submit his conceptions to the chaste, the correct, the eurythmetical; just as in depraved times the gorgeous spectacle of the melodrama supersedes the more refined and sublime productions of the legitimate drama, and the intellectual yields to the sensuous.

It may unfortunately be true that the architecture of antiquity is too often to be judged by those who have not studied the actual monuments of Greece and Rome, in the dry scholastic specimens of its application in some modern buildings. These are occasionally tame and insipid, and devoid of the characteristic expression, instead of reflecting the appropriateness fulness, and artistic embellishment which give sentiment of generous munificence to the original type. They may reflect the mere order with its column and entablature, and in due proportion; but where is the splendid materia of the ancients? where the spirit, thought and purpose of the original? It is like the lifeless and severely literal translation of a foreign author, without his point and vigorous form of expression. But such contending themes distract the mind of the student: the class-room is not the proper arena for such discussions: it is

only in the repose of earnest, constant, and decided study that the mind can prepare itself for the realization and embodiment of principles, founded upon the mastery of what has gone before—the acquisition of the expression of past ages. The theories of contending parties may afterwards be met, and the contrast may then perhaps healthily stimulate the mind, but not during the period of pupilage.

My purpose, therefore, in the series of lectures which constitute the entire course, is to make the student acquainted with the principles of construction, and familiar with the different classes of materials, and their proper use and application.

In the series upon the fine art division of the subject, I seek to avoid any exclusive preference, but to open up the whole range of monumental architecture of the truly civilised portion of the world, through all periods and in all countries; and I take a survey of the principles which have guided the erection of those edifices which have commanded the admiration of those of real calm judgment and refined taste in succeeding ages. The student must know, and that thoroughly, the elements of sublimity in architecture, so as to handle them, as they did in the olden time, in all their varied application, and with the like liberty of variety and transposition, to make them appropriately suit any special purpose, and give them the impress of individuality, novelty, variety, and reasonableness. Whenever these are acquired, the architect will produce impressions in proportion as he knows how to choose his style, follow the laws of taste peculiar to his "motive," and allow his imagination to be warmed and excited by the successful adaptation of the means to the end proposed: this may be predicated of every style.

Thus prepared, the architect may defy the false influences under which it is nowadays attempted to place him, and he may follow the inspirations of his genius, deriving encouragement in the development of those ideas congenial to his taste, and from the fruits of his own emotions and principles of thought; being neither the servile copyist, ignorant of the freshness of a new-born thought, nor the wild libertine, who sets all precedents at defiance. But there is another class of students immediately connected with building operations, whose object is of a more practical nature: to them the acquisition of the first principles of the science of construction is invaluable for future practice, and creates a spirit of just reasoning and investigation, and their knowledge of the general laws of architectural taste, as exhibited in fine monuments of the art, enables them to carry out more faithfully the ideas of the architect.

To the architectural student the association with those engaged in the same pursuit, and with a like generous ardour, stimulates to exertion; thus forming perhaps the basis of his future distinction and high position in the art; at the same time that it may create a high tone of feeling, and usefully increase the sphere of his professional friendships among the sons and pupils of the leading men of the profession.

THOS. L. DONALDSON, Prof. Arch.

ISLINGTON.

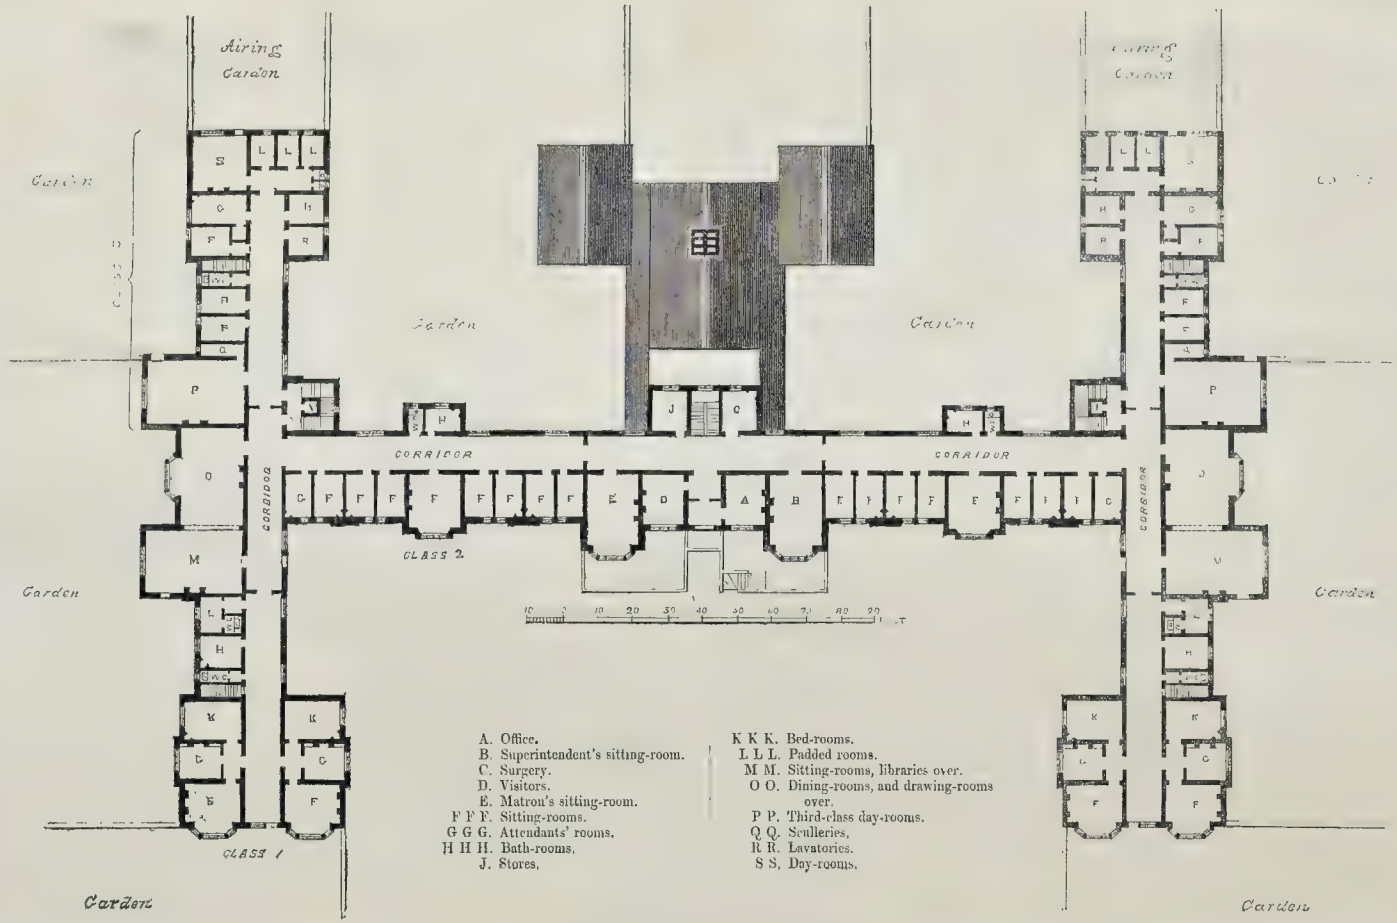
A NEW church, in the Pointed Style, dedicated to St. Jude, is rising in Mildmay Park. It is in one span, with transepts, and has a tower and spire on the south side. The walls are faced with Kentish Rag stone, and have Bath stone dressings. Mr. A. D. Gough is the architect, and Messrs. Dove are the builders. The first stone was laid on the 29th of last month, by the Rev. John Sandys.——Numerous houses are rising in all directions, some of them, as in Highbury new park, of considerable size and good appearance. General activity is apparent: the Dispensary, near the church, has been materially enlarged and improved, and the accommodation for the Ragged School, in Duddy's-rents, is being increased.——Some of the courts in the older parts of Islington are in a frightful condition, and should receive attention. One was recently mentioned in our pages, and the complaint made of that would apply to several. On the east side of High-street, near the Angel, there are courts containing houses altogether unfitted for occupation. The property on that side of the High-street, is necessarily kept down in value. Some general plan for the improvement of this part should be made, and steps taken by the whole parish to carry it out. Every resident (we ought to take a wider range), is personally interested in such a movement. These courts are hot-beds of disease, vice, waste, and misery. As we have often said, as the homes so the men. Well might a writer in a local paper of last year exclaim with reference to these dens,—"Islington, famous for thy salubrious breezes and sunny skies,—behold! There is a foul stain on thy bright escutcheon—there is a sore and pestilential ulcer in thy very heart. Be silent when people speak of the cellars of St. Giles and the dens of the Devil's Acre! be silent and blush, for thou art no better than thy neighbours. Thou boastest of open squares and stately terraces, and pretty villas, all embowered in shady trees, and surrounded by the children of Flora; but look into thine innermost recesses, and what wilt thou find? Filth, squalor, misery, disease, and the crime that is the result of such conditions. Up, guardian-angel of Islington!"

Endeavours have been made, especially by one of the inhabitants, Mr. Hallows, to improve the High-street on the other side of the way, where there is a considerable space between the road and the houses. Something has been done towards this, but it is still in a very unsatisfactory state. It might be made one of the most beautiful roads out of the metropolis. Its improvement by the owners of the houses would pay, even as a commercial speculation.——In another part of Islington, namely, on the west side of the road at Upper Holloway, near the mile-stone on the ascent to Highgate, the authorities of Islington have been putting up a stone, thus inscribed, on the site of one which had been removed:—"Whityngton Stone. Sir R. Whityngton, thrice Lord Mayor of London. 1397, Richard II. 1406, Henry IV. 1420, Henry V. Sheriff, 1395." Here, says tradition, sat Whittington ruminating, when Bow bells bade him "turn again." It is an ugly affair, but nevertheless shows right feeling: let us hope that it may fare better than those which preceded it. Islington has become a most important portion of the metropolis, and deserves careful government on the part of the local authorities, and the most strenuous exertions of those who are interested in its improvement.

THE OZONE THEORIES, AND SULPHUR IN CHOLERA.

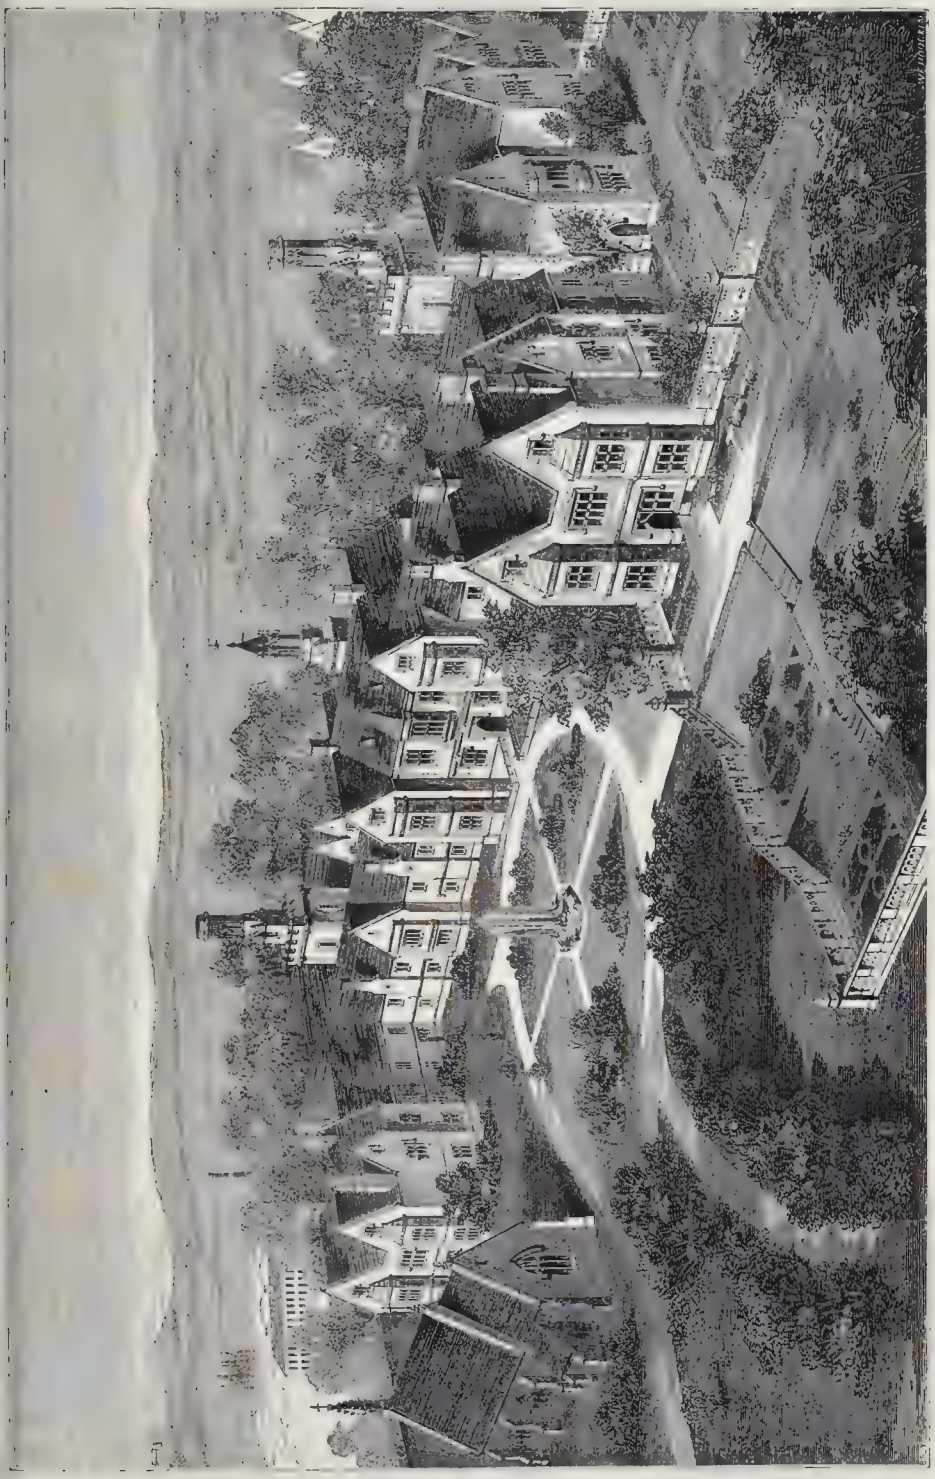
WE are gratified to find that our article of last week on this subject has excited some attention, and, what is more, is believed to have already done some practical good. The Local Board of Health at Merthyr Tydvil, amongst others, appear to have been impressed with the probabilities involved in the process of reasoning through which our conclusion that inflamed or electrified oxygen may be productive of cholera was arrived at, and Mr. Henry, C.E. the surveyor to that board, as a precautionary measure, has lost no time in adopting sulphur as a fumigator in dwellings or districts where deaths were taking place, and at the same time reprinted and circulated our article on the subject. He writes us to the effect that already it seems to have proved beneficial, and he suggests the burning of the sulphur also in fire-places, and allowing it to ascend the chimneys, so as to purify the atmosphere around the dwelling as well as within it.

Another correspondent, Mr. T. D. Welsh, informs us of a circumstance corroborative of our assertion that sulphur relieved premonitory cramps. A member of his family, he states, "has for years been subject to severe cramps, and it has been her invariable rule to take a piece of sulphur into her hand when attacked; and as invariably, after grasping it firmly, the cramp has abated, or suddenly ceased, and this cessation was simultaneously attended with the breakage of the sulphur into two parts." These singular effects he is inclined to attribute to electrical action, the superabundant (positive?) electricity in the muscular system being absorbed by the sulphur, which, we may here remark, is a high electro-negative,—a fact which induced us to use it internally in the cure of cramp, without reference to the ozone theories, but which corroborates our idea, that the oxygen inhaled through the lungs, if it be excited by *positive* electricity, may be released by sulphur from its abnormal and virulent "ozone" state. We hope to hear more of the use of sulphur and its fumes, even though the cholera is now very rapidly abating. Writing us on Tuesday last, we may add, the Merthyr Tydvil Board of Health Surveyor announces that the disease was better there, only eight deaths having occurred on that day in a population of 46,000.



Every day makes more apparent that we are correct in ascribing to cesspools an enormous influence in the production of disease.

HOSPITAL FOR THE INSANE, ERECTED ON COTON-HILL, NEAR STAFFORD.



THIS building, intended for the upper and middle portions of society, which is now nearly finished, and has been partly occupied by patients for some time past, is on a scale suitable to various classes of society, with entertaining rooms, corridors for exercise, and other arrangements which have been found advantageous in the treatment of the insane. The general plan of the building consists of an extended centre of 240 feet frontage, terminated with a receding and projecting wing at each end, and at right angles with it, forming a lengthened **H**; each of the wings having a frontage of 210 feet. The domestic offices are placed in the rear. The apartments of the superior officers and the committee-room are placed near the central entrance, as well as the visiting-room. These apartments will occupy about one-third of the centre: on either side, and extending to the wings, commence the suite of apartments proposed to be appropriated to second-class patients, whose circumstances enable them to pay such weekly sum as will afford them the accommodation of a comfortable private bed-room, and the common use of a handsome gallery, sitting-room, library, dining and billiard room, on the male side, and the same on the female side, substituting a music-room and a drawing-room for the library and billiard-room. At the junction of the wings to the centre building, and in the projecting portion of it, having all the convenience of a detached residence, are the apartments appropriated to the higher classes, in which eight distinct suites of apartments are provided, of various dimensions, with apartments for a private attendant or servant, communicating with a private garden. The general entertaining rooms, before described, are so situated as to be conveniently approached from these apartments. A private entrance for the first and second classes to their respective apartments is arranged distinct from the central entrances before described. In the receding portion of each wing are the galleries, and separated and associated sleeping-rooms, for the class requiring the greatest amount of assistance from the charitable funds of the institution. The building is two stories in height. The chapel is detached: in our view we have brought it up a little closer to the main building than it really is. The roofs are of a steep pitch, and are brought over the walls on a moulded eaves course; and above the summit of the roofs, and at the junction of the wings to the centre, a tower on each side, of considerable elevation, is raised, used as extraction shafts, and contains cisterns of water, from whence it is distributed to all parts of the building. The building is constructed of pale coloured bricks, with Bath stone for the dressings, and is covered with slate. Terraced walks and gardens are laid out on the sides, appropriated to the patients. The estimated cost of the buildings, chapel, laying out of grounds, &c. was under 29,000*l.*; and this sum, we are told, will not be materially if at all exceeded. Messrs. Fulljames and Waller were the architects.

It seems that the committee were their own builders. Mr. Richard Hawke was the clerk of the works, and he has carried out the whole of the work to the satisfaction of the architects.

THE ARCHITECTURAL ASSOCIATION will hold their opening *conversazione* at Lyon's-hill-hall, on Friday, October 6th.

PLAN OF HOSPITAL FOR THE INSANE.

HOSPITAL FOR THE INSANE, COTON-HILL, NEAR STAFFORD.—Messrs Pellatts and Weller, Architects.

CHURCHES AND SCHOOLS.

Algarkirk.—The church of Algarkirk, between Boston and Spalding, has been largely restored and decorated by the proprietor and pastor, the Rev. Basil Beridge. The north side of the church has been almost entirely rebuilt; and the earth around the building has been removed to the depth of several feet. The south porch, which has been restored, is inclosed with a pair of iron gates. The tower has been restored, and the spire, which fell down centuries ago, put up and ornamented with a weathercock. The Early English windows in the tower are new, but they have been erected so as to correspond with their original state; and the whole of the exterior has been restored. Inside the floor has been lowered from 10 to 18 inches, laying bare the bases of the pillars, all of which have been restored. The seats are open, and of solid oak. There are eight coloured windows in the chancel, including the large one: these are by Hardman. In the chancel also is an oak latticed window looking into the vestry, the cross bars of which are decorated with gold and crimson. The whole of the woodwork has been executed under the superintendence of Mr. Webster, of Wyberton. The decorations have been executed by Mr. Crace. The chancel is paved with Minton's tiles laid in cement. The stone reredos carving represents the history of St. Peter and St. Paul, to whom the church is dedicated. The panels of the reredos are filled with decorated emblems of the Evangelists, and underneath is gilt diaper-work. The sedilia and piscina are also decorated, and the altar-rail is of light iron-work in white, blue, and gold. The walls of the chancel are decorated with tile pattern, surrounded with borders of passion flowers, &c. On each side of the chancel is a carved oak seat, with open tracery at top, arcades, &c. The roof of the chancel consists of highly-decorated woodwork, resting upon a richly ornamented moulding, having gilt ball flowers, alternately blue and red, and connected with foliage. On the east wall of the south transept, the two tables are emblazoned. Here is a piscina with canopy, supported by a quaint figure. The roofs of nave and side aisles are new, and have been raised, and all the windows in this part restored, and the tracery made new. The opening took place on Sunday fortnight.

Little Chesterford, Essex.—The church here is about to undergo considerable alterations and improvements, under the direction of Mr. James Barr, architect, Windsor. The present unsightly timber-built and tiled bell-cot will be replaced with a substantial and ornamental stone turret: a new vestry will be built, some new buttresses added, the gables coped with stone, the east one ornamented with a cross, &c. The present sittings have all to be removed and replaced with new; also a new pulpit, of oak. The contract is taken by Mr. Smith, of Elmdon. Mr. Whitehead, of Royston, has engaged to do the stonework, &c.

Henley-on-Thames.—The repairs and enlargement of the parish church which during the last twelvemonth have been in progress, are now drawing towards completion. The day for re-opening will shortly be announced.

Wheatley.—A church-rate of sixpence in the pound has been voted by this parish, in vestry, towards the cost of a new burial-ground. It is also proposed, with the approval of the bishop, to make use of the opportunity thus afforded, by rebuilding, through public subscription, the church on the new site above the village towards the London road, so as to be capable of affording increased accommodation. The present building, partly in consequence of its mode of construction, will require extensive repairs, if not taken down. For the new church a considerable sum is already collected.

Burslem.—The first stone of a chapel and lecture-hall, in connection with the Dalehall Temperance Society, was laid on Monday week, by the chief bailiff of Burslem.

Torquay.—Two new churches are to be built at Torquay, on sites given by Sir Lawrence and Mr. Palk, near Meadfoot and Wellowood, in that town. It is intended to proceed with the erection of both churches at once. Considerable assistance has already been promised to the building fund.

Coventry.—The following remarks are from the *Coventry Standard*:—"We had supposed that the days of Daniel Daub had passed away, and that no churchwarden in the year 1854 would either whitewash or drabwash a parish church. We have been repeatedly told that nothing could be done towards repairing St. John's, for want of funds, yet some pounds were wasted a short time ago in drabwashing the interior, which has made the church look much worse than before, and in some parts the drabwash is already rubbed off. Some years ago 25*l.* were paid for drabwashing the exterior of St. Peter's, Hill-field. This was useless, as the wash is gone, and the bricks are now all visible. These shams and architectural hypocrisies had better be avoided: they are costly, and only deceive for a time. What is done, let it be done well, and with proper materials, or *not at all*. The south transept window of St. John's has just been stuccoed, and a novel specimen of stained glass introduced, in the *harlequin* style. We should like to know the names of the artist and his patron. Their names ought to be handed down to posterity." They ought, indeed, and the glass should be taken out carefully, and put away in the local museum, if there be one, as an evidence of the state of taste in Coventry in the year of safety 1854. We viewed it the other day with horror.

Preston.—On Saturday before last, the workmen engaged in the erection of the parish church, Preston, had a rearing supper provided for them in the National Church School-room. It is expected the church will be roofed in, in about five or six weeks. There are now three stained windows in the chancel, and others are shortly expected to be finished. A subscription will be commenced for improving and beautifying the case of the organ, to make it agree with the architecture of the church.

Leeds.—A letter has been received from the Home Secretary's office, in reply to a memorial of the vicar and churchwardens of Leeds, praying that private vaults and graves may be exempted from the Order in Council for closing the parochial burial-grounds. The concluding passage of the letter states that Lord Palmerston is sorry he cannot recommend such alteration in the arrangement for closing the said burial-grounds.

SPRING HILL COLLEGE COMPETITION.

I FORWARD to you a protest signed by all the unsuccessful architects at the late competition for Spring Hill College, Birmingham. If the document be not too long for your columns, you will much oblige us by publishing the same.

When committees issue conditions for a competition, they enter *ipso facto* into a contract with those who compete on that basis; and when we find that everything that constitutes an obligation on the committee is evaded, while all the advantage of the suggestions of the other parties to the contract remains with them, I think we are entitled to appeal to public opinion to check so unequal a state of things, especially when, as in this case, every appeal to the committee has been made in vain.

A COMPETITOR.

The protest sets forth that—

"Early in 1853 the committee issued 'particulars and conditions for a competition,' and amongst these the following paragraph found a conspicuous place. 'To insure, as far as possible, a sound decision, the committee will obtain the assistance of an architect of eminence, resident in London, and not competing, who will advise them on all questions relating to style, construction, cost, &c.'

In accordance with these conditions, we, in common with many others, sent in designs, and were, after much delay, informed by advertisement that, inasmuch as all the designs submitted would require the expenditure of a larger sum than that fixed by the committee, none could be adopted. The first premium was, however, awarded to Mr. J. J. Bateman, the second to Mr E. M. Barry, and four other architects, namely, Messrs. Wehnert and Ashdown, Mr. J. James, Messrs. Coe and Goodwin and Mr. Raffles Brown, were invited to send in their names to the committee. It was afterwards understood that Professor Cockerell had been consulted professionally in accordance with the promise given above.

On the 22nd July, the committee issued a circular, expressing their willingness to receive further suggestions from the above-named gentlemen, and accordingly modifying their original conditions in several particulars. These modifications, involving among other points of less importance, the addition of 1,000*l.* to the estimated cost, and the reduction in case of absolute necessity of the number of inmates to be accommodated, were all severally and explicitly laid down, and in addition, it was distinctly stated 'that the other conditions of February last, not mentioned in this letter remain as before.' No mention having been made of any departure from the original arrangement, with regard to the consultation of an eminent architect, which was manifestly one of the most important of the original conditions, and on which the committee themselves had particularly dwelt, as 'tending to insure, as far as possible, a sound decision,' we conceive we had a right to reckon on its being as strictly adhered to in the second competition as in the first. But the grounds of this natural deduction are greatly strengthened by the fact of this same circular letter providing that 'the cost is to be determined by the professional person or persons the committee may employ,' and concluding with a promise that the names and addresses of the competitors 'shall be carefully concealed from any professional gentleman whose opinion may be consulted.'

The promise, therefore, contained in the first conditions was not only reaffirmed in general terms, but directly alluded to in the separate clauses of the second circular letter.

In compliance with the above revised conditions, we prepared and forwarded designs a second time, and now learn with the greatest surprise that the committee have not only departed from the counsel of their distinguished referee in the first competition (Professor Cockerell), but have selected the joint design of Messrs. J. James and Raffles Brown, without seeking the opinion of any eminent professional adviser, in accordance with their promise thus made and repeated to us.

We desire to offer no opinion on the merit of that design, but we must ever consider that the course the committee have thought proper to adopt is utterly at variance with all principles of justice and equity, inasmuch as it involves a breach of faith with those who, in reliance on the observance by the committee of the conditions laid down by themselves, have expended both time and money in the attempt to meet their requirements, and now find their labour thrown away, their confidence misplaced, and the promise made to them completely set aside.

(Signed) J. J. BATEMAN,
E. M. BARRY,
WEHNERT AND ASHDOWN,
COE AND GOODWIN."

PROVINCIAL NEWS.

Market-Rasen.—The second of the two new exchanges, in this small town, namely, the Market-place Exchange, was formally opened on Tuesday in last week. The building is not yet quite completed. The site is at the corner of the Market-place, and formerly occupied with unsightly old buildings. The main entrance is at the outer angle of the building, and consists of a circular portico having an inner entrance, on each side of which are offices or rooms, serving as waiting or ante-rooms at assemblies and other times. One of these has been taken for the use of the Mechanics' Institution. The Exchange-hall contains a larger area than any other in the town, being 70 feet long by 30 feet wide, and is designed, not only for a Corn-exchange, but for all public purposes. The patent sun-light gas-burner has been introduced in the ceiling. At the farther end of the hall there is a semi-circular arch, with small arches, one on each side, and so constructed to answer for an orchestra when needed. Around the outside of the hall a number of shops have been arranged, and already let. The elevation is in the Italian style, of the Doric order, surmounted by a balustrade. The total cost will be 1,490*l.* being less than the architects' estimate. The building is executed in Ancaster stone and white bricks. The architects were Messrs. Bellamy and Hardy, of Lincoln, to whom the first prize was awarded in the late competition for the Boston Corn-exchange and Athenæum. Messrs. Chapman and Wallis, of Market-Rasen, are the builders; and the gas-fittings, &c. were furnished by Messrs. Simpson and Son, of Lincoln.

Norwich.—The Wellington statue, says the *Norfolk Chronicle*, "has arrived in this city, but has not yet been exhibited, the present duke

having, we understand, expressed a wish that his father's first presentation to the people of Norwich in a metallic form should be made on the site and at the elevation which may be intended for his permanent occupation. The best proposal we have yet heard is to place the statue in the centre of the market, and to remove Nelson—which, being of marble, would not well pair with Wellington—to the centre of Tombland. A large portion of the middle of the Tombland might very appropriately be railed off and planted with shrubs." Poor Nelson! His monuments are either never done with, or never let alone. The movement of his tomb in St. Paul's, to make way for Wellington, reminded us of the voice in the legend of the "Three Kings of Cologne," as they lay in their royal tombs. "Lye farther along, my noble brother," might with sufficient propriety apply to the "making" of "room" for Nelson's noble brother Wellington, in St. Paul's Cathedral, where the most central or exclusive place of honour was pre-occupied by Nelson alone; but we hope that this exceptional act is not to be taken as a precedent for displacing Nelson's statues to make room for Wellington's, wherever they may be.

Reading.—The erection of the new corn exchange by the contractors, is progressing rapidly. On Monday in last week, the mayor and corporation of the borough laid a large stone in front of the building, with some ceremony. On the face of the stone is a brass plate, bearing the following inscription:—"Reading Corn Exchange, erected by the Corporation, 1854. F. Hawkes, J. B. Clacy, architects." The men employed at the works were regaled with beer on the occasion.

Oxford.—Many of the citizens, says the *University Herald*, have availed themselves of the Long Vacation to effect alterations and improvements in their dwelling-houses, and we are pleased to find that in the exterior alterations generally, care has been taken to adhere as closely as convenient to the general style of the Oxford-street architecture. Flat and commonplace elevations have been avoided, and in consequence, the streets have not lost much in effect by the new houses and frontages.

Leominster.—The first stone of a series of new markets, which will cost nearly 5,500*l.* was laid with some ceremony in week before last. In the evening a public dinner took place at the principal inn in the town, at which the mayor presided.

Denbigh.—It has been resolved by the vestry to light this town.

Knighton.—The opening of the Silurian Mills at Knighton, in Radnorshire, on Friday week, appears to have been regarded there as an event of great importance, and a testimonial of silver plate was presented, on the occasion, to the proprietor, Mr. Banks. The manufactory is built of stone, and slated, containing three stories, each floor being about 70 feet by 50, with steam-engine house at the back, and drying-ground adjoining. It is out of the town, near the Teme, which here divides Radnor and Salop. The building is heated by steam. The engineering works are by Messrs. Fairbairn and Sons, of Manchester, and the machinery comprises all the recent improvements from the works of Mr. John Mason, Messrs. Manlove and Alliott, and other machinists. The machines are calculated to work the wools of Radnorshire and the adjoining counties, and the class of goods produced will be Welsh flannels, tweeds, blankets, rugs, and a new description of goods called "Silurian Cloth."

Birmingham.—The Willenhall Gas Company have been constructing a new gasometer, near the site of the old one, for the purpose of obtaining a double power of supplying the town with light. In excavating for the new tank, the workmen approached too closely to the old gasometer, and the result was that the intervening earth was broken down by the weight of the tar contained in the old tank. The tar flooded the excavation just made, and the gutters of the public streets were inundated with tar and ammoniacal liquor. Thence it found its way to the river Tame, a pump being used to send it there more expeditiously, and the consequence was that the water was so defiled that the water company's reservoir at Aston was closed against it, and the town had to be supplied with water by carts. Means were afterwards used to promote the flow of the gas-filth past the reservoir, and so purify the water as to render it fit for use again.

Manchester.—A new glass-house has been erected at the Botanic-gardens. In plan the building is a parallelogram of 150 feet long by 57 feet wide; it is constructed of timber framework filled in with glass for the sides, and framing similarly glazed for the roof. The sides and ends rise to the height of 14 feet from the ground, and then support a roof of glass, of flat pitch, covering aisles inside the building about 13 feet 6 inches wide. The upper edge of this roof rests upon a row of pillars which support a clerestory of considerable altitude, with pitched roof and end gables, in each of which is inserted a large wheel window, ornamented with geometric forms. The central space between the two rows of pillars is about 27 feet. Flanking each gable are two turrets about 6 feet square, rising to the height of 50 feet from the ground, exclusive of flag-staffs. These turrets are of open work, and seem to be adapted from those attached to the palaces of the Italian nobles. The space beneath one of the wheel windows has been appropriated for the use of an orchestra, when it may be found desirable to have one. The glass used is Hartley's patent for the roof and Chance's patent for the upright portions. The interior arrangements appear to be very simple. On that side of the building which faces to the south, a broad terrace has yet to be formed. As to colour, the intention at present is merely to give a dressing of paint to secure the perishable material from the weather. Messrs. D. Bellhouse and Sons have executed the work at a cost of about 3,000*l.* Mr. T. Worthington, of this town, was the designer. ——The opening of St. George's Hall, Liverpool, appears to be exciting a desire at Manchester to have a building for public meetings erected there. It is much wanted, and has even been long talked of.

Preston.—A contractor has been charged at the Preston Police-court, by the secretary of the Blackburn Waterworks Company, with using the water for purposes he had not contracted for, namely, for the purpose of slaking the lime used for the erection of two cottage houses in Mary Ann-street. The secretary stated that the charge of the company for water for the purpose of slaking lime was 3s. 6d. per house of the same description as those built by defendant. The penalty by the company's Act for the offence was 5*l.* but the bench mitigated it to 10s. and costs.

Newcastle-upon-Tyne.—A public meeting has been held and a movement commenced for the formation of a public park here, and a circular road to connect the western and northern districts of the town.

A DROP OF OIL.

EVERY man who lives in a house, especially if the house be his own, should oil all the various parts of it once in two or three months. The house will last much longer, and will be much more quiet to live in. Oil the locks, bolts, hinges of the street-door, and it will shut gently, with luxurious ease, and with the use of a small amount of force. A neglected lock requires great violence to cause it to shut, and with so much violence that the whole house, its doors, its windows, its very floors and joists, are much shaken, and in time they get out of repair in all sorts of ways, to say nothing of the dust that is dislodged every time the place is so shaken. The incessant banging of doors, scrooping of locks, creaking and screaming of hinges, is a great discomfort. Even the bell wire cranks should be sometimes oiled, and they will act more certainly and with such gentle force that there will be little danger of breaking any part of them. The castors of tables and chairs should be sometimes oiled, and they will move with such gentle impulse and so quietly, that a sleeping child or old man is not awakened. A well-oiled door-lock opens and shuts with hardly a whisper. Three pennyworth of oil used in a large house once a year will save many shillings in locks and other materials, and in the end will save many pounds in even the substantial repairs of a house; and an old wife living and sleeping in quiet repose will enjoy many more years of even temper and active usefulness. Housekeepers, pray do not forget the oil. A stitch in time saves nine, and a drop in time saves pounds.

ST. GEORGE'S HALL, LIVERPOOL.

THANKS to a description of this fine building in a local work, "The Stranger's Vade Mecum," ready to their hand, the daily papers have given such full particulars of its form and appearance as to render repetition almost unnecessary. Moreover, we propose shortly to see it for ourselves, and to give our own impression of it, and some illustrations; so that we shall confine ourselves now to a few brief notes from the accounts of others.

Many of our readers know it was at first intended that the assize courts and St. George's Hall should form two separate and distinct structures, and premiums were offered for separate plans of the assize courts and the hall, in both of which Mr. Henry Lonsdale Elmes was the successful competitor, out of seventy-five for the courts and eighty-six for the hall. The original design, however, was abandoned, and the architect was directed to make a fresh design, which was approved of in May, 1811; and during the same year the foundation-stone was laid.

The interior of the hall measures 169 feet by 75, the height being 82 feet. It is lighted by gallery windows in the west, and by windows near the roof, in arched recesses at the ends. The breadth of the hall is increased to 100 feet by ten recesses—five on each side, 12 feet in depth, containing five rows of benches. The organ is placed at the north end, occupying the space between four of the lofty polished red granite pillars which support the roof, and nearly fills the entire breadth of the hall. The workmanship within the building is massive, like that without, and the greater part of the carpentry is of polished oak. At the south there is the Nisi Prius Court and grand jury room; at the north, the Crown Court and a large concert-room, on a level with the noble chamber in the centre. There are also court-rooms for the duchy of Lancaster and for the sheriff, and several other apartments, including a library. There are three entrances to the structure, the chief by the south portico, on each side of which a noble staircase extends to the recessed galleries of the great hall. The northern entrance is through an apartment under the semi-circular concert-room; and the third entrance is from the eastern façade, opening directly into the corridor which passes round the hall. There are six entrances to the ground-floor of the hall, three on each side from the corridors. These are flanked with grey granite pillars, on which are hung brass doors, which cost about 250*l.* each, executed by Messrs. Potter, of London. There was a competition for the design of the doors; but we believe these are executed from the drawings of Professor Cockerell, to whom the completion of the building was confided on the death of Mr. Elmes.

For the glass to fill the windows, too, a competition was proposed some time since, and small prizes given; the first to Mr. Miller, of London, for a set of designs, principally architectural, but introducing medallions with historical subjects, copied from pictures, and the second to Messrs. Pilkington, of St. Helen's, for a set of designs by Mr. F. Howard, who proposed to fill the window opposite the door with an original design of "St. George and the Dragon," occupying the whole space, 18 feet by 8 feet 6 inches, with the exception of a border; groups, illustrating commerce and industry, to occupy similar space in the outside; and ornamental designs in the intervening windows, including medallions of Mr. Elmes, Roscoe, Canning, Huskisson, and other distinguished persons connected with Liverpool. What will actually be done is still unsettled. It is a difficult point to determine.

The hall is paved with tiles by Mr. Minton, of very elaborate design.

Gas lustres by Messenger of Birmingham hang down on each side from the key-stones of the arches, which are fashioned into the prows of vessels. The jets of gas issue from the points of stars.

There are between the doors twelve niches, for statues, two of which hold figures of Sir Robert Peel and George Stephenson. Panels of Irish marble, green in colour, are let into the walls, and a gallery with balustrade of British

marbles, of various colours, runs along each side.

The effect of the balustrade is said to be very good: it is composed of black and variegated marble, with serpentine slabs at intervals. Serpentine is likewise introduced upon the walls.* The roof is supported upon twenty-two granite pillars, of large diameter. Rising above the capitals, and between the minor arches of the galleries, are twelve emblematic sculptures in bas-relief, white on pale blue. Within each of these ten recesses the work of the sculptor has further adorned the building, and the ceiling, which is arched, is a very elaborate piece of decoration, with blazoned shields and gilded stars, not *quite* so severe as the exterior of the structure. Of course there are objectors to some of the details, and the enclosure of the building outside has produced much adverse criticism: of this, however, hereafter.

The corporation of Liverpool have not gained much credit by their management of the inauguration: it was wanting in wise liberality and foresight.

Miscellanea.

RAILWAY MATTERS.—A portion of the winding two-mile tunnel at Bramhope, on the Leeds Northern line, fell in on Tuesday week while a passenger-train of twelve or thirteen carriages was passing, and severed the train in two, burying two of the carriages, and causing the detached carriages to run back down the incline so as to come into collision with a truck full of Irish reapers. Many persons were seriously injured, though none were killed on the spot. The tunnel was choked by hundreds of tons of stones and earth. Upon an examination of the roof, which continued to fall in small portions at short intervals, it was found that the arch had become depressed and fallen in to the extent of 11 feet in width by 15 in length, the longest portion being across the tunnel. Above this aperture the rocks, stones, and earth had fallen, leaving a chasm over the archway probably 20 feet high. The mass of rubbish which had fallen into the tunnel, and beneath which the engines and tenders were buried, filled up the whole breadth of the tunnel to within a few feet of the roof. The removal of the *débris* was commenced early on the Wednesday morning, but it will be weeks, it is said, before the traffic can be resumed, if not months.—— From a Parliamentary paper just printed, it appears that there were 100 persons killed and 119 injured by accidents on all the railways in the United Kingdom during the half-year ending June 30, 1854; there being 81 killed and 102 injured in England and Wales, 14 killed and 13 injured in Scotland, and 5 killed and 4 injured in Ireland. These accidents occurred on 7,813 miles of railway, of which 5,964 are open in England and Wales, 996 in Scotland, and 953 in Ireland. The number of accidents to trains was 47, 36 being to passenger and 11 to goods and mineral trains. Of the 36 accidents to passenger trains, 21 were collisions between passenger and other trains or engines, and of the 11 accidents to goods and mineral trains 5 were collisions. The total number of deaths resulting from accidents to trains was 11, and of injuries 85. Of these no less than 9 deaths and 64 injuries were caused by collisions alone, 2 deaths and 57 injuries being to passengers, and the remainder to railway servants.—— Some experiments have just been made by Captain Tyler on the Brighton line to ascertain how soon a train could be stopped. The effect of all was, that the train, while travelling at the rate of a mile in 63 seconds, was pulled up in a minute and a half after the signal, and in the distance of 1,386 yards.—— Before Louis Napoleon's last departure from Paris, a railway carriage on the American plan was built specially for the journey—a vehicle divided into two large rooms, for the imperial party and their household, provided with writing materials, books, a piano, billiard-table for the aide-de-camp, &c. &c.

MURAL PAINTINGS.—Recent restorations in Bacton Church, Suffolk, have revealed the fact that the whole interior was anciently covered with mural paintings of scriptural and legendary subjects; among them a giant Christopher; and a Doom, in its usual position over the chancel arch.

CHURCH-KEYS.—Wherever I find the clerk "not at home," I always send my card into the parsonage, and have had no difficulty in seeing the church; on the contrary, every facility shown as to rubbing the brasses, or taking a sketch. As far as I know, every clergyman has the key of the church at his house, as well as our friend, the clerk, who is generally a man unsuited for his duties. "OLD RUSTY."

* Much of the internal work was executed by Messrs. W. Cubitt and Co. of London.

DWELLINGS OF THE AGRICULTURAL CLASSES.—The Rev. H. Stuart, of Oathlaw, whose late pamphlet on the position of the agricultural labourers of Scotland attracted attention, has been on a visit to Dunrobin Castle, at the special request of the Duke of Sutherland, in order to suggest to his Grace what could be done to improve the condition of his people. The duke placed in Mr. Stuart's hands a blank paper book and a pencil, with a request that he would write down on the spot his freest censure of everything objectionable in his farm-dwellings on the Sutherland estates. Together they made a thorough examination of houses, cottages, and bothies, prying into closets, mounting into garrets, and leaving no hole or corner unvisited.

THE NORWICH SCHOOL OF ART.—During last week numbers of the citizens and boys of the different schools of Norwich have, by invitation, visited a small exhibition in the gallery above the school, in St. Andrew's, and consisting of a selection from the productions for which medals were awarded at the recent spring examination of the works of the various schools of art in the country. There were no specimens by students of this year in the Norwich school. This school will be opened at the beginning of next month with a festive meeting. It will be on a larger scale than heretofore, and an assistant master is appointed to take charge of the elementary classes. Mr. Claude L. Nursey, the present master, says the *Norfolk Chronicle*, was appointed to the Leeds Government School of Design in 1844, which school he formed, and also established a school at Bradford. Whilst at Leeds, he was employed by the Board of Trade to inspect the drawing-classes at the Mechanics' Institutions in the large towns of Yorkshire and Liverpool. For his successful management of the Leeds school, and for reports on the above classes, he was promoted in 1849 to the Belfast school, at an increased salary, by the Board of Trade. At this latter school he remained five years, and so successful has the Belfast school been under his management, that many of the recently-opened schools have adopted the system of the Belfast school. This last has been the only provincial school in which local scholarships have been established, but the Norwich school, we understand, will soon be able to lay claims to similar advantages, as Mr. Nursey has already induced one or two gentlemen to promise aid in this way. Mr. Nursey was a student in the Life School of the Royal Academy of Arts, London, and was a pupil of the late Sir David Wilkie, R.A. and painted for Sir David for four years. He was thus engaged with Sir David until his death on his return from the East.

VALUE OF AGREEMENTS WITH WORKMEN.—Mr. G. Woolfall, glass bottle manufacturer, at Manchester, lately preferred an information against three of his workmen, for breach of agreement. It appears that Mr. Woolfall engages his men for one year, and requires that they shall sign an agreement, which not only regulates their duties, but binds them to stay in his service for twelve months. The three defendants had signed this agreement, but had run away. Mr. Woolfall, notwithstanding that he had sustained a loss of 10*l.* per day, by his men leaving their work, consented to withdraw the charge against two of them, who were married men, on condition that they returned to their work and paid costs, but pressed for a conviction as an example against the third, who was a single man. The two former were, therefore, discharged, and the third committed to prison for twenty-one days.

THE BOMARSUND FORTIFICATIONS.—The Czar, it is reported, has ordered the arrest of the contractors who constructed the works at Bomarsund, now destroyed. The charge alleged against them is, that they undertook to *build* the fortifications from base to summit, while it is now proved that the interior was simply a loose rubble, incapable of opposing any resistance to the concussion of the shot, and pouring out from the least breach in the facing of the forts. Moreover, the commandants of all the other fortresses in the Gulf of Finland are said to have received orders to make a searching examination of the state of their works, and at once to report the result to the Minister of War at St. Petersburg. It was to be expected that some attempt would be made to save the renown of the Czar's grand Chinese fortifications, sadly shaken at Bomarsund, which, doubtless, were not a whit worse constructed than are all the rest of the lot.

RAILWAY WORK: BEDFORD AND LEICESTER RAILWAY.—Is it not of the utmost importance that the work forming bridges, &c. should be done in the soundest possible manner, having bricks well burnt and thoroughly cemented together with mortar? for surely, if this is not attended to, the line cannot be considered safe. The opposite to this occurs not many miles from Ickelford: it not only may prove an injury to the community at large, but must have been already an injury inflicted upon the honest tradesmen.

A SUBSCRIBER.

WHITEWASHING.—London is a dark place, its narrow streets, high houses, and smoke-pall make its various apartments gloomy and cheerless. We obviate this somewhat by the expensive reflectors of Chappuis and others, but much more might be done, and by very cheap means. Whitewashed boards, placed at an angle of 45 deg. in the areas of cellars, and against the windows of many dark apartments, will strangely illuminate them, and make places clear as daylight which were otherwise quite dark. Much also might be done by the very simple and cleanly process of whitewashing the backs of all houses. These very often in the City form irregular quadrangles, which, if whitewashed all round once a year, would add much to the cheerfulness and lightsomeness of places that are now gloomy and miserable enough: at the cost of a few shillings the daylight might be extended an hour in every twenty-four.

LINCOLN ARCHITECTURAL SOCIETY.—The annual public meeting of the Architectural Society of the diocese of Lincoln, was held in the Town-hall, East Retford, on Thursday in last week. Mr. G. E. H. Vernon, M.P. in the absence of the Duke of Newcastle, presided. The hall was artistically decorated with anastatic transfers of monumental brasses, &c.; and on the table were a number of volumes, comprising views of ancient pulpits, analyses of the various orders of architecture, &c.; and impressions, amounting to some hundreds, of similar brasses to the large one decorating the hall. The report for the past year was presented, after which papers were read "On the Fortunes of the Church of Southwell during the Troubles of the Sixteenth Century," by the Rev. J. F. Dimock; "On the Church and College of Sibthorpe," by the Rev. G. H. Smyttan; and "On the Abbey and Church of Blyth," by the Rev. John Raine. An evening meeting was held, when papers were read "On the Study of Monumental Brasses," by the Rev. F. P. Lowe; and "On the Churches of East and West Retford, with a brief Notice of one of the historical Events connected with the Town," by Mr. Hawksley Hall. An excursion was made on Friday to some of the neighbouring churches, including Blyth, Worksop, and Haughton Chapel.

FALL OF A CHURCH: TWENTY PERSONS KILLED.—One of the most violent storms, says the *Louisville Democrat*, which has ever swept over this section of Kentucky left its dreadful footprints in the city on Aug. 27th. After a severe drought of many weeks' duration, the sky early in the day indicated rain. The clouds gathered, and we had what persons not within the reach of the tornado accompanying it would call a thunder shower; but within the reach of its sweeping breath was the Third Presbyterian Church, corner of Eleventh and Walnut-streets, which it completely wrecked, blowing from a westwardly direction: the entire building fell in,—roof, rafters, brick walls, and all, crushing some twenty of the congregation to instant death, and wounding seriously, perhaps mortally, some ten or twelve others.

IMPREGNATION OF WATER.—I have before written to you on the fallacy of the Nuisances Removal Act, and I beg now to state a fact for the benefit of those whose cry is "Cesspools and Constitutional Government—Gases and Glory." I have left the "Hill Gods" to their own mode of opposing "movements of all kinds, whether sanitary, social, or revolutionary." I have retired to the valley, thinking there to enjoy the "insipid water" which the "Hill Gods" are said to reject. The water was beautiful, as I in my blessed ignorance had fancied. Philanthropic individuals reported many cottages on the crown of the hill above me, where the poor creatures declared they were in warm weather unable to remain in their houses. They stated, "it makes life a burden." They made a stir in the matter, by writing a strong letter to the board of guardians, who, under the Nuisances Removal Act, instructed the inspector to make another and more efficient stir. Vaults were emptied, the accursed cesspools cleansed, and chloride of lime was used in abundance by those who could afford it: mark the result upon me *at half a mile's distance* My well, of hitherto apparently pure water, became a solution of chloride of lime! It, however, was of little consequence, for in a day or two there was no water at all. The fact I have mentioned shows that even the passage of water through the bowels of the earth for nearly half a mile by no means ensures the public against impregnation by the worse than barbarous custom of privy vaults and cesspools; yet we find in Swindon these filthy receptacles are in most houses near to, and in many within one or two yards of the water-well. In very old houses we find much mischief prevented by "puddling" with clay round the water-well, but modern speculators eschew the puddling process. If only their own wells were injured, the punishment would be just; but as I have shown in my own case, it is uncertain how far off you may inflict on your fellow-man the diet Sennacherib thought objectionable.

C. A. W.

Museum of Ornamental Art.—The museum at Marlborough House will be re-opened on Monday, October 2nd. During the recess the specimens have been re-arranged, and considerable additions have been made. The collection of arms from the Royal Armoury at Windsor will continue to be exhibited. An alteration has been made in the days of admission. In future the museum will be opened on Saturdays, which will be free days, instead of Tuesdays, chiefly with the view of enabling the schools in the metropolis to send their students to visit the museum on the afternoons of Saturdays.

Smoke.—Allow me to suggest a few improvements in the smoke-consuming appliances, as described in the *Builder* of September 16th. If the flue was *covered* instead of being at right angles, it would be of decided advantage for increasing an uninterrupted draught, as well as the facility of sweeping. The cistern should be a feeding one, supplied constantly from another, and with a regular supply, with an equal pressure on the rose. Further, if a receptacle was made under the tank, the bottom, at least, of iron, the contents of soot, when fell, could easily be dried by a charcoal fire. The superfluous water might be caused to flow into the pans of water-closets, if the level would admit. It possesses strong deodorizing qualities.—T. G.

Wakefield-bridge Chapel. — It may be interesting to some of your readers to know that the chapel on Wakefield-bridge was not only restored, but rebuilt, after the ancient model, which now stands in the grounds of Kettlethorpe-hall, a short distance off. I mention this as many would feel a greater interest at seeing the original than its *fac-simile*.—W. M. F.

The Sheffield Montgomery Monument.—A "sketch model" by Mr. Bell, for the proposed memorial to Montgomery, has been exhibited at the Cutlers' Hall, Sheffield. The plan of the base is cruciform, with a series of base mouldings, and a rusticated basement. Upon the four arms of the cross, so to speak, are seated figures of Piety, Poetry, Benevolence, and Patriotism. From the centre of this group rises a tall octagonal pedestal, which grows into a square, the upper edge of which is moulded, and on this, terminating the composition, is the statue of the poet. The figures are to be in bronze, the masonry in granite of a grey tone. The total height of the monument will be 25 feet. As to the site, the general feeling, according to the *Sheffield Independent*, is against its erection in the cemetery. At the church-gates, it is added, ample space and the most central part of the town would both be secured.

The Cambrian Archæological Association—On Monday, the 18th, the society visited Vale Crucis Abbey and Llangollen. At the County Hall, Mr. Longuvile Jones read a lecture on Roman roads and cromlechs (cromlechi). A circular was then read as to a proposed new window for Ruthin Church. On Tuesday a portion of the members visited Rug, and in the evening a private meeting of the committee closed the proceedings.

Progress of Rural Architecture.—Under this title the *Mark Lane Express* has an article in which it is strongly advised that thermometrical observations of the atmosphere should be made within different sorts of buildings, high and low, having thick walls, hollow walls, &c. &c. and under all sorts of meteorological circumstances. White varnish, if it can be had cheap, is recommended for the roofs of cottages and farm buildings as a resistive to heat in summer and cold in winter; also double windows, walls, and roofs, high ceilings, &c.

Want of Water in Canals, Waterworks, &c.—The want of water throughout the country this autumn, is something no less remarkable than the deficiency in thunder and lightning of which we spoke last week, and is, doubtless, closely connected with it. There are several hundreds of miles of canal shut up from want of water in the provinces, and everywhere there have been complaints of want of water supply in towns.

Ventilation of Sewers.—As disease and its prevention are just now occupying so much public attention, allow me to suggest one very simple, and, I have no doubt, efficient preventive for much of the mischief caused by the generation and emission of poisonous gases from the sewers in large towns, this being one of the most fruitful sources of disease. The plan suggested is the construction of drains from the main or branch sewers to the ash-pits of such manufactories as have a good chimney and a fire generally burning; then, by simply having a door to the ash-pit, similar to that of the fireplace, to shut off the draught, the supply must come from the sewer, which would keep up such a current of air in the sewers that no gases could accumulate, and such as did, would be purified by passing the "fiery ordeal." The cost of a few such ventilators would not be very great, and the boon to such places must be immense.

M. H. S.

Felstead Competition.—About three months since, a limited number of architects were invited to send in plans for the extension of the present Felstead Grammar School, and also for the erection of entirely new buildings. At the meeting of the trustees held last week, the premium of 50*l.* was awarded to Mr. F. Chancellor, of Chelmsford.

American Sculpture. — A correspondent of the *Newark (U.S. Advertiser*, writing from Florence, says of Miss Hosmer, the young American sculptress:—"Miss Hosmer has taken a villa for the summer in the environs of Florence, and will here occupy herself with drawing out compositions to mould later into clay. Her drawings are said to be full of feeling, and classically beautiful. She has already made several successful busts; also the study for an ideal statue, which will occupy her next winter at Rome. Being but twenty-two years of age, what she has done is remarkable, and full of promise, which cannot fail to be realised, her genius being united to an intrepid will and executive force seldom met with in so young a person. She is wholly devoted to her art—rises at six, works all day, and to lose no time in the feminine art of the toilette, adopts such *modes* as utility, not the French *modiste*, invents."

Tenders in Melbourne.—A writer in the Melbourne *Argus*, finding that "the Melbourne architects advertise for tenders for certain works—the same are given in, and in many cases nothing more is heard of them," suggests "that it would be beneficial to more than the builder if the plan of the London architects was adopted, by which all tenders would be advertised, and insolvencies less frequent amongst contractors."

Fever-famed Dwellings.—A very handsome house near one of our best provincial towns, says a country paper, could never keep its tenants, and at last stood empty and became worthless, because a detestable fever seized upon every family that lived in it. A ready-witted observer promised the owner to find out the cause. He traced the mischief to one room, and presently conjectured what was the matter there. He let a slip of glass into the wall, and found it the next day dimmed with a fetid condensed vapour. He tore down a strip of the paper, and discovered abundant cause for any amount of fever. For generations the walls had been papered afresh, without the removal of anything underneath; and there was the putrid size and the fermenting old papers, inches deep! A thorough clearance, scraping, and cleansing put an end to the fever, and restored the value of the house.

Trapping Drains.—Permit me, through the medium of your columns, to agree with the observations of your correspondent, "R. R. A." on the advantage which would be gained by issue of *imperative order*, that all house drains connected with main drains or sewers shall be trapped, otherwise the gully-hole traps correct an evil in one locality (the streets), and drive it into another (the houses), either vent being, without doubt, the great cause of the majority of cholera cases from the sluggish sewers, which are mainly constructed on *too flat falls*, and, consequently, generate poisonous gases, which I propose should be collected by charcoal or coke fires from the sewers, and burnt off, the fires being made available for other commercial uses, for steam-engines, &c. &c.; but the idea cannot, and must not, be entertained for a moment, "of driving these horrid gases through simple shafts," which would have outlet at the top, and beat back into our bed-rooms and attic windows with every current of wind. The gases *must be destroyed*, or no good is gained, and cholera and typhus will have their sway with every successive warm season. Prevention is better than cure, and we are bound, by every law of God and man, to protect those who cannot do so themselves—*the poor*, compelled by adverse circumstances, to live in low neighbourhoods. W. A.

Cœur de Lion.—I have been turned out of Palace-yard, where I had taken up my abode, and am now a wanderer again, ignorant of what position I am destined to occupy. As I consider myself rather a good-looking fellow (to say nothing of my horse), I hope I may not be buried in some confined nook, but be placed in some open position, where my fine person and gallant steed may be seen to advantage. If the choice were left to me, there is a spot I would wish to be placed upon, and which is in close proximity to the scene of my former triumphs, when, in 1851, thousands of my admirers used to flock daily to my levees, and gaze upon me with delight. It is in the centre of the *new* broad walk in Kensington-gardens, and where no less than eight avenues meet. I should thus be seen, first, from Kensington Palace, secondly, from the Bayswater-road, thirdly, from the Ride, in Hyde-park, fourthly, from the drive in ditto, besides the other four avenues. Trusting you will permit me to make my wishes public, through the medium of your paper, I am, your obedient servant,

Richard Cœur de Lion.

Modern Monumental Brasses.—The use of these appears to increase, although but slowly. We have recently seen one, executed by Mr. Waller, in memory of John Skinner, A.M. Dean of Dunkeld, who died as long ago as 1841. It has been erected by the members of his congregation, and is a good specimen. It is noticeable, too, for the lettering, which, while quite appropriate to the Gothic character of the brass, is perfectly legible.

The Architectural Museum.—It is suggested that architects should insert in their specifications for the restoration of old churches, in the event of casts of existing ornaments being required for facilitating such restorations, that copies should be taken and sent to the museum.

TENDERS

For new barracks, at Richmond. Mr. Pownall, architect.

ADVERTISEMENTS.

BOROUGH of WOLVERHAMPTON.—PUBLIC HEALTH ACT. SURVEYOR WANTED.—WANTED, by the Local Board of Health of the Borough of Wolverhampton, a SURVEYOR. He must be practically acquainted with all the duties devolving upon such officer under the Public Health Act, 1848. He will be required to reside within the borough, and to devote his whole time to his official duties, to the exclusion of all private or other business. Salary, 300l per annum, and an allowance of 50l per annum for the purchase and keep of a horse. Offices will be provided by the Local Board, and the Surveyor will have the aid of an assistant and of an office clerk. Persons desirous of applying for the appointment must send in applications and testimonials, addressed to the Town-Clerk, under cover to the Chairman of the General Purposes Committee, on or before the 2nd day of October, 1854.—By order,

THOS WALKER, Town-clerk.

Town-hall, Wolverhampton, 11th September, 1854.

LEAMINGTON LOCAL BOARD of HEALTH.—To Clerks to Local Boards of Health, Surveyors, and Superintendents of Police.—The Local Board of Health for the district of Leamington, constituted under the provisions of the Public Health Act, 1848, are prepared to receive APPLICATIONS from Candidates for the respective offices of CLERK, SURVEYOR, and SUPERINTENDENT of POLICE and INSPECTOR of NUISANCES on appointment, for whom an official residence will be provided, with coal and candles. Persons desirous of becoming candidates for any of the above appointments must, on or before the 30th day of SEPTEMBER inst. send in testimonials, addressed "To the Chairman of the Local Board of Health," endorsed "Offices' Tender," stating salary, calling, and age. Each officer will be required to give up the whole of his time to the duties of his office, and not engage in any other occupation without the special leave of the Board. The Board do not pledge themselves to accept the lowest or any Tender.

By order,
A. HAYNES, Clerk.

Town-hall, Leamington, 19th Sept. 1854.

TO CARPENTERS AND JOINERS.

GOOD WORKMEN may meet with constant EMPLOYMENT, on application to JAMES E. HALL, Builder, Carrington, St. Bridge, Nottingham.—Liberal wages will be given

TO PARENTS AND GUARDIANS.

TWO ARCHITECTS, in Partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter to A. B. 16, Waterloo-place, Regent-street

TO BUILDERS' FOREMEN.

WANTED, an experienced Man, as General FOREMAN, to superintend a large work in London.—Address, by letter, stating full particulars, and where last employed, to A. B. 19, Tokenhouse-yard, City.

TO STONEMASONS.

WANTED, TEN or TWELVE good HANDS to work on soft stone at St. George's Church, Doncaster. Wages, 4s 6d per day. Two years' work can be guaranteed to good workmen.—Application to be made to the foreman, on the works, or by letter to Mr. CHARLES IRESON, Jun. Builder, Newland, Northampton

TO PARENTS AND GUARDIANS.

WANTED, a respectable YOUTH as an IN-DOOR APPRENTICE, to learn the art of Gold Beating. An opportunity for a youth who has been accustomed to Christian duties. A moderate premium required.—Apply at Messrs. HARRIS and LONGMORE'S, 3, Wilmot-square, late of Pollard's-row, Bethnal-green.

TO BUILDERS, ARCHITECTS, &c.

WANTED, by the Advertiser, a RE-ENGAGEMENT as General Foreman or Clerk of Works. Can be well recommended by his present employers. No objection to the country. Direct W. H. at Mr. Pratt's, 16, Smithfield-bars, London.

WANTED, by a respectable Man, who thoroughly understands the business of Brick and Tile making, a SITUATION as FOREMAN in the above line, or would take it by contract.—Address Y. Z. at Mr. Loudon's, Burrough's-place, Hendon, Middlesex.

TO BUILDERS.

WANTED, by an experienced and Practical Man, a SITUATION as SHOP or OUT-DOOR FOREMAN. No objection to the country. Satisfactory references can be had from his last employer. Direct to O. P. Office of "The Builder"

TO BUILDERS AND BRICKMAKERS.

SITUATION WANTED, by a Young Man, fully competent to take the entire management of fields for BRICK FIELD Age, 33 years. Has had the management of fields for ten years. A good reference can be had.—C. G. 12, George-yard, Lombard street, City.

TO ARCHITECTS.

WANTED, by an Architectural Draughtsman, who has been accustomed to make perspective, fair, working, and detail drawings, &c. a RE-ENGAGEMENT in a London office. Salary moderate.—Address, E. F. No. 9, Elizabeth street South, Pimlico.

TO GRAINERS AND DECORATORS.

WANTED, to APPRENTICE a respectable YOUTH, 15 years of age, to the above trades. A Premium will be given.—Address, free, J. J. care of Mr. Macey, Upholsterers' Warehouseman, 87, Great Titchfield-street.

TO SURVEYORS, LAND AGENTS, &c.

THE Advertiser, a Surveyor of considerable experience in town, parish, and other surveys, and a good draughtsman, will shortly complete his present engagement, and wishes for a RE-ENGAGEMENT as early as possible.—Address, A. Y. Z. Post-office, Burton-upon-Trent.

TO ARCHITECTS, &c.

MENSURATION.—A practical Surveyor of some experience is prepared to give INSTRUCTION to young Architects, who may be desirous of making themselves acquainted with taking out quantities, abstracting, &c. For terms and particulars apply to Mr. JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

TO ENGINEERS, SURVEYORS, &c.

THE Advertiser, who has been engaged several years as an Office Assistant, and whose work has always borne the highest character, is desirous of an ENGAGEMENT. Can give every and faction in the way of reference.—Address, H. S. 221, High-street, Borough.

LAND AGENT.—A Gentleman, experienced in planting, draining, timber falling, building, and farming, wishes for EMPLOYMENT as an agent or steward. Good reference and security will be given, and only a moderate salary required.—Apply to A B care of Charles Etheridge, Esq. Land Agent, Station, Harleston, Norfolk.

TO ARCHITECTS, CIVIL ENGINEERS, &c.

A SURVEYOR, of considerable practical experience, is desirous of meeting with gentlemen who would be willing to enter into arrangements with him either for measuring of artificers' work, making out specifications, and preparing estimates for projected buildings, railways, or other works of magnitude, surveying and valuing property, &c. For further information, apply either personally or by letter, to Mr. JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn

TO MASTER PLUMBERS.

A YOUNG MAN, who has been many years in the above business, wishes to ARTICLE himself for a short time. Understands painting and glazing.—Address, E. F. G. Mr Thrupp's, 48, James street, Oxford-street, London.

TO BUILDERS.

AN experienced SHOP FOREMAN is desirous of a RE ENGAGEMENT. Unexceptionable reference from the situation he is about to leave. Direct, C. B. 126, St John-street, Smithfield, London

A YOUNG MAN, having a practical knowledge of MECHANICAL ENGINEERING, is desirous of PERFECTING HIMSELF in the DRAWING DEPARTMENT, of which he has had some experience. He will give his time gratuitously.—Address, B C 8, Bloomfield street, Finsbury.

TO BUILDERS, IRONMONGERS, AND TRADESMEN REQUIRING SMITHS' WORK.

AN experienced Hand is open to an ENGAGEMENT in the Rate, Reading, Bellhanging, and Building Trades, thoroughly understands every description of wrought and cast iron work. The Advertiser would take work at a fair price finding tools and iron only, if required, or would join a small business where experience and energy, coupled with steadiness and respectability, would be a desideratum. No objection to a town or country. Good reference can be furnished.—Address, A. B. Wilkinson, 4 News office, Watling street, Brompton

TO CARPENTERS AND CABINET-MAKERS.

AN active respectable Youth wishes to APPRENTICE himself to a Carpenter or Cabinet-maker for three years.—Address, J. G. 23, Great William street, Caledonian-road

TO BUILDERS.

A YOUNG MAN, accustomed to the duties of a Builder's office, requires a SITUATION. Address, F. C. Cold Higham Villa, Towcester, Northamptonshire

TO ENGINEERS, SURVEYORS, &c.

A THOROUGH Practical Mechanical DRAUGHTSMAN, COLORIST, SURVEYOR, &c. has just completed an engagement, and will be glad to enter upon another immediately.—Please address to M. D S. Mr. Coon's, Lithographer, Cheapside

TO ARCHITECTS.

A CLERK of WORKS, who has just completed superintending an extensive public building, is desirous of an ENGAGEMENT. Is a mason or G fair, having had a great experience in both. The most satisfactory reference can be given. Address, A B 15, Russel-street, Stepney.

TO BUILDERS, PLUMBERS, PAINTERS, &c.

AN experienced Man, a Carpenter, who has filled the situation of painter, painter, grainer, paper hanger, and decorator, in the repairs of houses, had good experience in shop fronts, sashes, bevelling, stained glass, and fronts. He WANTS a SITUATION, at moderate salary.—Address, M W. S, Mount street, Walworth-road

AN ARCHITECT of eighteen years' experience would devote his mornings in the service of a first-rate Builder, practical observation of the execution and value of work being his object rather than amount of remuneration. A partnership, if satisfactory investment of capital be warranted, might not be refused. Address, A. B. Bleckley's Newspaper Office, 14, Great Marylebone-street.

TO ARCHITECTS AND SURVEYORS.

A QUALIFIED ASSISTANT, with ample references as to personal and general efficiency, is open to an ENGAGEMENT. Salary moderate. Address, R. S. 77, Spencer-place, Euston-road

TO ARCHITECTS.

A THOROUGHLY Practical DRAUGHTSMAN, who has had several years' experience in making perspective, fair, and working drawings, writing specifications, &c., and who is moreover highly businesslike in habits and capabilities, is desirous of meeting with a SITUATION in town or country. References of the highest respectability. The advertiser being married, would like to meet with a permanency. Address, S. H. C. care of Mr Seckham, 6, St Aldate's, Oxford.

TO PLUMBERS AND BUILDERS.

A YOUNG MAN, who understands painting, glazing, paper-hanging, and jobbing plumbing, wishes for a country SITUATION, in or near town.—Address, stating terms, to T. F. 27, Sidney-street, Somers town.

A RESPECTABLE, middle-aged Man, who has had many years' experience in a builder's office, wishes for an ENGAGEMENT, either permanently or partly. Is well acquainted with the routine of a builder's office, measuring up dimensions, abstracting, and bill ing, and would be glad to make himself serviceable.—Address, W. D. A 38, Hatfield street, Blackfriars-road.

C. LEFTWICH, VARNISH MANUFACTURER, LEAD, GLASS, and COLOUR WAREHOUSE, 21, Munster-street, Regent's-park. C. L. begs to call the attention of the Trade, Builders, &c. to his stock of plumbers' closet-basins, plug ditto, brasswork, &c. &c. Sheeted lead, and patent pipe, plate, plate, sheet and crown glass, white-lead, oils, colours, &c. &c. PER CWT GIVEN for OLD LEAD; GLASS ILLUMINATORS for FLOORS, AREA VAULTS, &c.

A PARTNER, and STEAM POWER and PREMISES WANTED.—A Partner wanted who can command from 500l to 1000l to extend the manufacture of an article of universal and continuous consumpt on, and which returns a large profit. As a premises with from four to ten horse steam-power. Address, A. Z. Mr. Bilhus, Lamp Manufacturer, Old Barrack-yard, Knightsbridge.

PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just issued a Pamphlet descriptive of various Patented Inventions for the Permanent Way of Railways, which are adopted and are being applied to more than 3 000 miles of line. On application a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Secretary.

LEATHER BANDS for DRIVING MACHINERY EDWARDS PATENT. Engineers, Millowners, Printers, and others using bands for driving machinery, are respectfully invited to inspect EDWARDS IMPROVED FOLDED FLAT and ROUND LEATHER BANDS (the round bands from ¼ inch to 6 inch diameter), which for strength, durability, and straightness in working, surpass any bands at present in use. Manufactory, 32, Great Sutton-street, Clerkenwell.

TO STONE-MASONS.

TO BE DISPOSED OF, an old-established BUSINESS, upwards of sixty years carried on by the present family, near the New City of London Cemetery.—Address to A. A. A. Office of "The Builder."

TO BE DISPOSED OF, at King's Lynn, Norfolk, a SMALL STEAM-ENGINE MANUFACTORY, with Iron Foundry, Smiths' Shops, Steam Power, Lathes, Drill, Planing machines, Shears, Punch, &c. The present proprietor is retiring, and can introduce to the business a highly respectable local connection, and to any one competent to undertake the class of work the present opportunity is most desirable. The premises are either to be sold or let, and the plant, which is not large may be taken at a valuation. Information may be had, and the premises viewed, by applying to Mr. WILLETT, Lynn, Norfolk.

IRONMONGERY BUSINESS to be DISPOSED OF, on most advantageous terms. The present proprietor, who is of an advanced age is anxious to get out of business, and would part with it on easy terms. The house and premises, which are situate in a pleasant town on the south coast of Kent, are excellent, and well adapted for an increasing trade. To a young man of energy who can command a capital of 500l, it is an opportunity which seldom offers.—For further particulars, address to J. E. Elliott and Son's Library, Ashford, Kent.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

TO BE DISPOSED OF, an old established BUSINESS in the above line, an excellent opportunity for one in the trade. Satisfactory reason given for leaving.—Address, J. M. Mr. Edwards's Coffee house, Seymour place, Brynston-square No agents need apply

TO BUILDERS, &c.

TO BE DISPOSED OF, a good Builder's BUSINESS, in the country, with immediate possession. Rent, 40s per week for rebuilding.—Apply by letter, to G H. Office of "The Builder"

CANNON-STREET IMPROVEMENT.—BUILDING LEASES.—The Committee for Improvements within the City of London hereby give Notice, that they will meet at GUILDHALL, on MONDAY, the 16th day of OCTOBER next, at ONE o'clock in the afternoon precisely, to receive TENDERS, in writing, agreeably to a form to be obtained at the Office of the City's Architect, from parties willing to take BUILDING LEASES of SUNDRY LOTS of GROUND, in the south side of Cannon street West, and on the west side of Old Change. Plans can be inspected, and conditions seen, upon application at the Architect's Office, Guildhall, on any day (Sundays excepted), between the hours of ELEVEN and THREE.

Guildhall, Sept 1854. MEREWETHER.

IMPORTANT BUILDING GROUND.—CITY of LONDON.—The Merchant Tailors' Company are prepared to receive TENDERS for BUILDING LEASES of several PLOTS of GROUND in Threadneedle street and Finchlane. A plan of the ground and form of Tender may be obtained at the Company's Office, Henrietta-street, Cavendish square, and at the Clerk's Office, Merchant Tailors' Hall, Threadneedle-street, where Tenders under seal are to be delivered on or before the Afternoon, after which no Tender can be received. The Committee will meet on the following day FRIDAY, the 20th of OCTOBER, at TWO o'clock, to open the same, when the parties will be expected to attend. The Company do not bind themselves to accept the highest or any Tender

SAMUEL FISHER, Clerk to the Company.

FREEHOLD and LONG LEASEHOLD, BUILDING LAND, COTTAGES, and GROUND-RENTS, Isle of Wight: Sandown Bay: about Seven Acres of Freehold and Long Leasehold Building Land, adjoining the cliff, with unimpeded views of the English Channel and inland scenery of the Island, a most healthy bracing air; sand-rock substratum; excellent spring water; safe bathing; close to church and post-office in the immediate vicinity, and adjoining the high road from Ryde to Ventnor, to and from whence coaches pass several times daily

In the above locality, a Freehold Cottage Orné and pleasure-ground, cottage-house, and stable, two sitting and five bed-rooms. Let on repairing lease to a highly respectable tenant.

A Freehold Cottage and Garden, being "Little Jane's, the young cottager," situate at Brading.

About 1a. 2r. Freehold Building Land, in a most sheltered and picturesque situation at the foot of Brading, down on the southern side, with splendid views of the sea.

22l per annum well secured Ground-rents.

The above to be disposed of by private treaty.—Particulars of Mr. WOODMAN, Architect, Hove, Brighton; or Mr CHARLES TAYLOR, Grange place, Sandown, Isle of Wight.

LANDING WHARF and DRAWING DOCK, LETTS WHARF, near Waterloo bridge, Surrey side.—Every accommodation is offered for the extensive wharfage, landing, shipping, drawing, and warehousing goods. English and foreign timber, iron, stone, bricks, sand, coals, &c. &c. 150feet river frontage for floats of timber, large wapples, a thirty-ton crane for heavy goods, boilers, &c.; also a ten-ton crane.—Apply to ROUTLEDGE and SON, on the Wharf

WANTED, a WHARF and Enclosed Premises, with Sheds or Warehouses facing the Thames. Apply, stating where situated and rent, to Messrs. OSRI and ARMANI, No 6, Guildhall chambers, Basinghall-street

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 39, Albany-street, Regent's-park.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,
65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.
MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

SEYSSEL ASPHALTE COMPANY,
STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications,

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.
ORSI AND ARMANI.
THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)
DIRECT FROM THE MINES.
REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.
AND THE
WORK GUARANTEED FOR THREE YEARS.
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.
A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of
ORSI AND ARMANI.
THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER
THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.
OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great nationa ehows it has been exhibited, and OBTAINED THE PRIZE. For being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Durable Felt, for covering Boilers, &c., is also manufactured by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the only means of being supplied with the genuine article, and in the best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION of the said Works in Great Britain where the above Felt is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt To be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other Buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

BECK'S WHARF, ISLEWORTH.
BUILDING MATERIALS. Builders having works to execute southwest of London, will find a good supply from this wharf, on reasonable terms, with every convenience for speedy Loading by travelling cranes, other large but easy carriages. Portland, Caen, Bath, and Yorkshire stone, always in stock; landings, paving, &c. Also, marble in slab, chimney pieces &c., and end to end slates from the Penrhyn quarries, timber, deals, limes cements, clay goods, &c.—N.B. This wharf is very near the St. Margaret's estate

CLERGYMEN and the PUBLIC are in-
forming a Society, established for the erection of PAID-FOR PEW-RENT FREE CHURCHES, to be let for a few years at a moderate rent until paid for, obtained by order or by lining. It is easy to unite the churchwarden and sidesmen to promote. They are to be complete for use; 300 sittings, 450l.; 500 sittings, 750l.; 1,000 sittings, 1,200l. Application to the superintending Architect, Mr. F. THOMSON, Grantham place, Trinity Church Square, Park.—Specimens to be seen

TO ARCHITECTS, BUILDERS, AND OTHERS

R. L. MOORE, late of Pentonville, PLAIN and ORNAMENTAL LEAD GLAZIER, begs to inform his friends, having recently removed to more extensive and convenient premises, situate No. 5, Castle street East, Oxford-street, is prepared to execute all commissions of glazing in the most workmanlike manner and despatch, with which he solicits a continuance of their favours. Manufacturing and repairing of all sorts of lead to the Trade. 5, Castle-street East, Oxford-street.

SUCCESSFUL VENTILATION.—
WATSON'S PATENT SELF ACTING DOUBLE CURRENT VENTILATORS have been successfully applied to Courts of Justice, Public Halls, Sashes, and almost every kind of Building, as well as to withdraw Steam Smoke Dust, and Heat from metal, and other information forwarded on receipt of a postage stamp. Instructions need for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

PREVENTION of SMOKE, and improved
COMBUSTION of FUEL in FURNACES—WOODCOCK'S PATENTS.—These inventions which have rapidly created a sensation, perfect combustion, even during banking and stoking, by which every ounce of coal is made to produce the ordinary draft, the attendant is relieved of the necessity of opening doors and trap, and effects a large saving in fuel.—For particulars and charges apply to WILLIAM WOODCOCK, Earl's Court Brewery, Brompton. The invention can be seen at work at 108, HOLYDAY STREET, STRAND, on MONDAY, TUESDAY, or SATURDAY, between the hours of TEN and FOUR.

SMOKE NUISANCE.—Mill Owners are
respectfully informed, that smoke arising from their furnaces can be consumed at very little expense, with certainty in general by steam, and can be applied to any boiler and will not impede the draft. For further particulars and reference, apply to Mr J. E. CANDLE, 3 William-street, Lincoln's Inn-fields, London, or to Mr JOHN BARKINGTON, Engineer, Yorkshire Lead, Lancashire.

SMOKE.—Mr. BOOTH, Civil Engineer,
9, Portland-place, Wandsworth-road, London, has succeeded in destroying smoke under the most difficult engine and other boilers. A saving of 4l. per week has been made in an engine boiler of 36-horse power. References can be given to all parties who desire to have their boilers under the same system.

SMOKE PREVENTION.—(OFFICE of
REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.)—NOURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

ASPHALTE.—GERVASE FOOTTIT,
Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—
Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN FITKIN-DON, PODONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

THE CHOLERA and LIFE ASSURANCE.
TO PERSONS of LIMITED INCOME.—In a former occasion, when the country was visited with the fearful scourge of cholera, the Directors of the PROVIDENT CLERKS' ASSURANCE ASSOCIATION earnestly called attention to the danger of neglecting the easy and certain provision for a beloved family which Life Assurance affords; in many cases their appeal was listened to, and numbers were thereby saved from having their property consumed by the privations of want and poverty. On the present or a like occasion they again desire strongly to urge upon those, especially whose income dies with them the imperative necessity and pecuniary advantage which an assurance effected on the above principle affords, by which the benefits are both important and extensive; not less than forty aged clerks and widows being already in receipt of annuities varying from 10l. to 30l. a year each from the PROVIDENT CLERKS' BENEVOLENT FUND. Any information relative to the purposes of the Association, its rates of assurance, &c. may be obtained of the agents, or at the Chief Office, 15, Moorgate-street, London. By order of the Board,
WM. THOMAS LINFORD, Secretary.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

eing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 6 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. For which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland.

N.B. The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse 315, OXFORD-STREET.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

GREAT REDUCTION in the PRICE of FLOORING.—A large Stock of SEASONED FLOORING always on hand at the following prices:—

		Per square.
¾ inch (2 cuts in 2½ inch), yellow		16s.
1 " " " "		20s.
¾ " " " white		15s. 6d.
1 " " " "		19s.

Yellow Deals, 4s.; White, 3s. 9d. per 12 feet.
Yellow Battens, 2s. 6d.; White, 2s. 3d. per 12 feet.
Pine Planks, 8s. 6d. per 12 feet.
Swede Timber, per load 62s. 6d.
Dantzic " 65s.

A. and A. beg to inform their customers they have now taken off the 20 per cent. from their mouldings, and the prices will be the same as last heretofore.

ARCHIBALD and ATKINSON, St. Pancras Saw Mills, Camden-bridge-street, Old St. Pancras-road.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING, Mitred and MATCH BOARDING, of all lengths and sizes. Also an extensive stock of dry White Yellow and Pine Deal Ends, 2nds, 3rds, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, and delivered punctually to the time mentioned, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory, Wilton-road, Pimlico Basin.

MAHOGANY, FURTHER REDUCTION. SAMUEL PURNEY begs respectfully to solicit the attention of Manufacturers and others to the reduced prices of his dry Stocks of Spanish and Honduras Mahogany, Wainscot, Pine Planks, Deals, &c.:—

Spanish Mahogany in planks and boards, from 8d. per foot super			
Honduras ditto	"	"	7½d. "
Wainscot	"	"	4d. "
Yellow Deals, 12 3 by 9			4s. 0d. each.
Spruce ditto	"		3s. 6d. "
Dry Pine Planks, 12 3 by 11			4s. 0d. "
Spruce Paling Laths			10s. 6d. per 120.

An extensive Assortment of Veneers and Cut Stuff of every description always on hand, at equally low prices.

Borough-road, Southwark, and Elm street, Gray's-inn-lane.

TO FANCY-WOOD MERCHANTS.

VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced more than by the ordinary method.—For specimens of work and particulars of price, apply to J. CHACK, Sole Patentee, Veneer Cutting Works, 44, Robert-street (adjoining the King's-road Saw-mills), Chelsea.

PREPARED FLOORING, &c.—ALFRED ROLLINGS begs to inform parties shipping wood goods to the colonies that he can supply any quantity or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY begs to draw attention to the following:—

2,400 Pieces of Timber
15,000 Planks, Deals and Battens.
35,000 Prepared Floor Boards, of all lengths and sizes.

The Building Trade are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for the month can be had on application.

N.B. The extensive saw-mills are now in operation.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood cutting Company beg leave to inform their customers that the company's additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1851.

TIMBER.—To RAILWAY COMPANIES, CONTRACTORS, BUILDERS, &c.—MACKINNON and CO. Commission Agents, Montreal, Canada, and Agents in North America for Messrs. Fairbairn and Sons, Manchester, &c. &c. are prepared to make selections and purchases in Canada, of oak elm, ash, birch, red and white pine, spruce, hackmatac, &c. either in bulk or specified lengths, or cut to any scantling, such as suitable for railway sleepers, railway wagon and carriage manufacture, flooring or joining purposes, sheet piling, &c. &c. thereby saving waste freight, and additional cost of cutting up in England. MACKINNON and CO are also prepared to state prices (in sterling money) of above, delivered free on board, at Montreal or Quebec.

Montreal, 17th July, 1854.

Reference:—Messrs. W. Fairbairn and Sons, Manchester; Messrs. Laurie, Clark, and Co. Liverpool.

CYCLORAMA, Albany-street.—Now Open, with a COLOSSAL MOVING DIORAMA of the CITY and BAY of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the Great Eruption of '79, and present state of the excavated City, painted by Mr. McNevin, from sketches taken by himself in 1853. Daily at Three and Eight o'clock, with appropriate music and description. Admission, 1s. Children and Schools half-price.

PATRON H.R.H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION. Under entirely new Management. The Seventh of the Monday Evening Course of Lectures to the Industrial Classes will be given on the 25th instant, by Dr Bachhoffner, being his Second Lecture on Electricity, illustrated with brilliant experiments. Lectures by Dr Scoffern, on the Destructive Chemical Resources of Modern Warfare. Nature Painting, by Dr Bachhoffner. Exhibition of Dubosq's Illuminated Cascade, in addition to all the Daily Lectures. Optical Exhibitions, Photographic Portrait Gallery, &c. A Band of Music under the direction of Mr. Wand, of the Royal Italian Opera. The Gas-lighting by John Leslie, Esq.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored to machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, carlens, stables, liquid manure, ships, barges, well-sinking, &c., adapted for any depth. Hydraulic pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N B The above can be worked either by hand, horse, or engine power.

Iron Pails 3s. per doz. painted.
Ditto ... 4s. per doz. galvanized.

Upper Ground street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

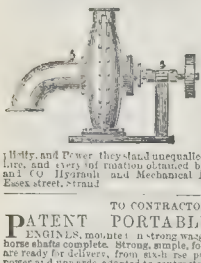
which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS



The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick-makers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids (hot or cold) raised or forced, will find it greatly to their interest to use GWYNNE and CO'S PATENTED PUMPS. For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MELVIN and HALLS, Engineers and Portable Engine Makers, 52, Blackfriars road. These engines have been successfully employed for years

FOR SALE, a 6-horse portable STEAM-ENGINE nearly new, worked by three months, by Tuxford and Son, also a Mill for crushing hard substances, to be sold cheap Apply to P. BLAKER, Crayford, Kent.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE CHECK COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852.—In answer to your inquiries respecting the gutta percha tubing for pumps, I find that the water has not affected it in the least although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours &c. C. Hacker." N B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c., will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf road, City-road, London.

ISAAC PARRY'S POTTERIES, Copperas-lane, Church-street, Deptford, Kent, begs to invite the attention of Contractors, Builders, and Wholesale Dealers to his extensive assortment of articles in the GLAZED STONEWARE, for sanitary and other purposes; likewise Red Drain-pipes, Chimney pots, &c. The only manufactory of the kind in the neighbourhood.

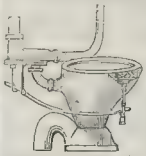
TO SANITARY COMMISSIONERS, SURVEYORS, ARCHITECTS, BRASSFOUNDERS, PLUMBERS, BUILDERS, ENGINEERS, &c.

MAYER, BOULTON, and CO. (from London), CORNWALLIS POTTERY, STAPLETON-ROAD, BRISTOL.—This is the only Manufactory in the kingdom for the exclusive production of Flint, Closet, Sanitary, and Lavatory Basins of all descriptions. M. B. and Co having purchased the extensive Premises, which were formerly used as a Pottery and foundry, and converted the same into a Staffordshire Pottery, are now producing from 2,500 to 3,000 of these articles weekly, and from their intimate knowledge of, as well as their long practical acquaintance with, this peculiar business, they can manufacture cheaper than any other house. They invite especial attention to their Drab Hopper Basin and Trap, at 7s. 6d. each, delivered in any part of the kingdom, and where large quantities are required a liberal discount is allowed. Orders for White Drab, Marbled, Blue Printed, Enamelled, and Gilt Goods attended to on the shortest notice.

London Depôt—18 Wharf, City basin.

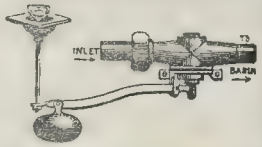
N B. On Sale, Two Lathes, a Drilling Machine, a Facing ditto, a Punching ditto, a Bending ditto, a Stove, a large Fan, a pair of Shears; also, a great variety of Patterns and Tools used in the foundry business, and which must be removed before M. B. and Co can complete their alterations.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,



MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware and miscellaneous Goods. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at the Hard House, Blackwall. Orders executed from the above places, from Falconwharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 23, Old Fish-street, near St. Paul's, London.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

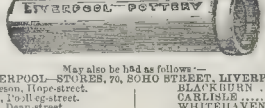
Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.—FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 3 inch to 36 inch, Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

PURE WATER, for manufacturing purposes may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Boilers and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.



DOULTON AND WATTS,

LAMBETH POTTERY, LONDON.

STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

JENNINGS'S GULLY AND OTHER TRAPS.

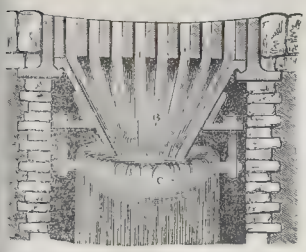

Fig. 1.

The poisonous gases generated in Sewers and Drains, from the decomposition of animal and vegetable matter, should not be allowed to escape, to the injury of the public health.

All Drains should be trapped, and those Traps which keep back all impure air, and prevent improper matters from entering drains, are the Traps best suited for the purpose.

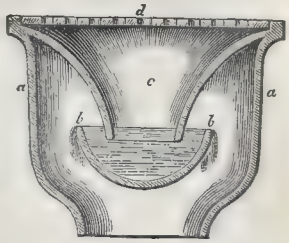
GEORGE JENNINGS submits the above illustrations of his PATENT TRAPS for the determination of those who judge of their merits.

Fig 1 shows one of JENNINGS'S SKELETON GULLY TRAPS, the brickwork of the gully hole answering for the case, and can be had as follows:—11 inches by 11 inches; 16½ inches by 14½ inches; 20 inches by 20 inches; 28 inches by 18 inches.

Fig. 2 shows one of JENNINGS'S SINK or AREA TRAPS. These can be had from 4 inches to 9 inches diameter, in lead or iron, galvanized or otherwise.

Prices and full particulars of JENNINGS'S PATENT DRAIN PIPES, Imperishable WATER-CLOSETS, SLUICE VALVES, FIRE and ALL OTHER COCKS, Slop-cutter Shoes, &c. can be had on application, or by post, if two stamps are enclosed to

GEORGE JENNINGS,
ENGINEER AND GENERAL BRASSFOUNDER,
29, Great Charlotte-street, Blackfriars-road.



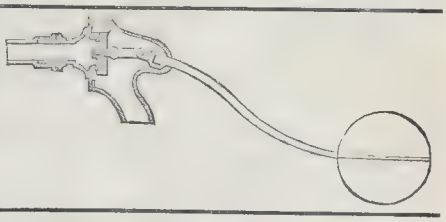


Fig. 2.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections to fittings such as spindles, slides, and cylinder fittings, so fatal to Ball-valves generally. They are perfectly correct in action, and so arranged as to accumulate the power of closing against the column of water whenmost required, and are warranted to stand any known pressure of water.

	⅜	½	¾	1	1 inch.
Complete with Balls:—Plain shank	5s.	6s.	6s. 8d.	7s. 11	12s. 6d each.
" " Screw ferrule	6s.	0s. 6d.	7s. 6d.	8s. 3d.	1as. 6d. each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that these are correct prices for inserting in specifications.

J. TYLOR AND SONS, WARWICK-LANE, NEWGATE-STREET, LONDON.

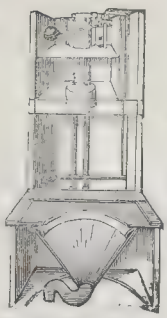
DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Tupperan ther Pans, with best White Glaze inside.



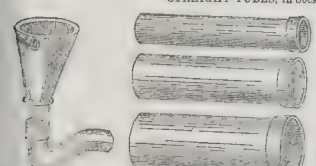
Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.



GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. F. HOUGATE, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

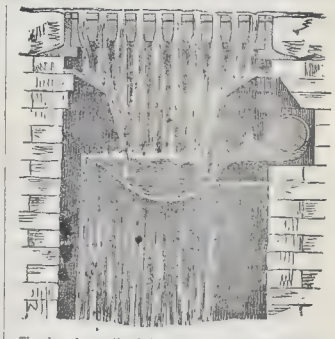
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.



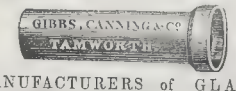
Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Islington; TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Bryd ges-street, Covent Garden; and at EDWARD COCKS, 94, Wardour-street, Oxford-street.
Drawings and List of Prices will be forwarded free, on application.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connell's Registered Model Water-closet."—This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

BUNNETT and CO's PATENT SELF-ACTING EFFLUVIA-TRAP, for Sewers, Drains, and Cesspools, is entirely self-acting and self-cleansing, cannot get out of order, and requires no attention.



The above is a sectional view of the Trap in its ordinary position, with the rolling weight at the extremity of the lever attached to the moveable pan. The body of the trap, dipping into the moveable pan, forms a perfect vapour-proof joint, and should the trap ever get stopped, the water will rise in the body of it till it overbalances the weight, which then rolls towards the centre, and allows the pan to fall to its fullest extent, effectually discharging all obstructions; the weight then rolls back, and brings up the pan to its former position, catching sufficient water to form a fresh joint.

Five years' extensive use in various parts of the kingdom have thoroughly tested the practical superiority and utility of the above invention over all others, as proved by constant repetition of orders, and numerous testimonials from various local boards, town surveyors, and others who have adopted them.
Office, 26, LOMBARD-STREET, LONDON. Works, DEPTFORD, KENT, where particulars, testimonials, &c. may be obtained; also of most respectable Ironmongers.

J. TURNER, Pottery, 2, South Wharf, Praed-street, Paddington.

Ironstone, Caen Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c., &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

SALES BY AUCTION.

PIMLICO.—To Ironfounders, Cemetery Companies, and parties having out Ornamental Grounds, Nurserymen, Builders, and Others

MR. LEREW is favoured with instructions from Messrs. Fox, Henderson, and Co. to SELL by AUCTION, on the PREMISES, No. 24, Bessborough-street, Pimlico, on MONDAY, on Tide Road, and two following days at TWELVE for ONE o'clock day, about 150 TONS of ORNAMENTAL IRON PALISADING and RAILING, to form part of the Pall Mall Road, on Hyde-park; several tons of wrought iron in bolts and cotters, gutter-ends and shoes, sills, posts and rails, and old cast-iron standards, tee and other girders, cast plate and other gratings, sash-frames, sash-bars, and sundry ironwork; also a quantity of Hartley's rough plate glass; ton of rope and scaffold poles, and sundry vices, bellows, 100 navvy barrows, four wagons, stone-trucks, timber-carriage, and miscellaneous materials. MESSRS. BEADEL and SONS are instructed to SELL by AUCTION, at the MART, London, on TUESDAY, OCTOBER 3, at TWELVE, in Six Lots, valuable WHARFAGE, SHOPS, and DWELLING-HOUSES, fronting the River Thames, extensive and substantially erected Warehouses, Offices, Stores, Stabling, and other Building, suitable for the carrying on of wharfinger purposes; also a convenient DWELLING-HOUSE, Summer-street, in excellent repair, fit for immediate occupation, and a portion of the late Swan Inn, and Premises, lately used for business purposes.—Particulars, with plans, may be had at the Auction Rooms, Bartholomew-close; of Messrs. Nayler and Reid and Co. at the Bank, Windsor; and of Messrs. Beadel and Sons, 25, Gresham-street, London.

BATTERSEA, SURREY.—Long Leasehold Property, equal to Freehold.

MESSRS. NICHOLSON and SONS will SELL by AUCTION, at the SWAN INN, Battersea, on FRIDAY, OCTOBER 6th, 1854, at TWO for THREE o'clock precisely, in one lot, two good brick built and slated HOUSES and SHOPS, as also the commodious and extensive premises, with the whole of the improvements thereon, situate in Creek-road, Battersea, Surrey. Each house contains four rooms and a back kitchen, fitted up with every convenience, and has a piece of garden in front. Rent 18*l.* per annum. The premises are well drained. The above property is held under a lease for the term of seventy-five years, from the 25th day of March, 1852, at a ground-rent of 3*l.* 15*s.* per annum. May be viewed by permission of the respective tenants, who have directions to the sale.—Particulars and conditions of sale, may be had of Messrs. Constables and Hamilton, 3, Inner Temple-lane, and 5, Raymond-buildings, Gray's-inn, London; at the Swan Inn; of Mr. Passmore, Lavender-road, Battersea; and at the Auctioneers' Offices, High-street, Wandsworth.

MIDDLESEX, near Uxbridge.—For SALE by AUCTION, by MESSRS. COBB, at the MART, London, on TUESDAY, the 31st of OCTOBER 1854, at TWELVE o'clock in Five Lots, pursuant to an order of the High Court of Chancery, made in certain causes of Colston v. Lilley and Staple-v. Carr, a highly desirable FREEHOLD ESTATE, in the parish of West Drayton, near the village immediately adjoining the church, comprising a genteel and extensive range of substantial brick-built residence, lodge, &c. in the occupation of Mr. Bagley, and 19a. 0r. 8p. of fruit, plantation, and garden ground in front of the said premises, on rising ground by high-road, with walks, having good building frontages on the high road, and resting on a deep substratum of capital brick earth, less than a quarter of a mile from the Drayton Railway Station, three miles from Uxbridge, and thirteen miles from London, offering a rare opportunity to land and building societies, builders, brickburners, and others desirous of investing in a valuable freehold property of this best description, with great local and other advantages in a parish where much of the land is copyhold and of less desirable tenure. The premises can be viewed by permission of the tenant, and particulars, with plans, may be had at the Mart; the De Burgh Arms, West Drayton; of Messrs. Freeman and Bothomley, Solicitors, 20, Coleman-street; of Mr. E. F. Seagy, Solicitor, 27, Mortgate-street; of Mr. S. Naylor, Solicitor, Great Newport-street, St. Martin's-lane; of Messrs. Mourilyan and Rowsell, Solicitors, Venables-buildings, Gray's-inn; of Mr. C. J. Monkhouse, Solicitor, Craven-street, Strand; and of Messrs. Cobb, Surveyors and Land Agents, 18, Lincoln's-inn-fields.

Fourth Sale of the Building Materials, to clear the ground for Battersea-park.

MR. W. R. GLASIER is honoured with instructions from the Commissioners of her Majesty's Woods and Public Buildings to SELL by AUCTION, on the PREMISES, the Works, Depôt, Dock, and Tide Wharf, near Vauxhall Wat rworks, Battersea-fields, on WEDNESDAY, OCTOBER 11, at TWELVE for ONE, the valuable BUILDING MATERIALS, Fixtures, and Fittings of the Abandoned Works, comprising the Lime, sheds, Office, &c. and consisting of about 1,000 different parcels of the following useful timbers in rafters, principals, &c.; about 30,000 fire-bricks, 300,000 capital stock-bricks; useful steam-engine of 6-horse power, iron boilers, lift-pump, hot air apparatus, 800-gallon steam-boiler, cistern, iron furnace-bars, frames and sashes, doors, a few stoves, Scotch and other rafters. May be viewed the day prior and morning of sale, and catalogues had at the Office of Works, 12, Whitehall-place; of James Pennethorne, Esq. 7, Whitehall yard; at the Office of the Clerk of Works, Park-road, Battersea; at Garraway's, Change-alley, Cornhill; on the Premises, and of the Auctioneer, 21, Charing-cross.

SALES BY AUCTION.

Baltic, Quebec, and St. John's Timber, Deals, and Battens, and other Wood Goods.

FOR SALE by PUBLIC AUCTION, on WEDNESDAY, the 4th day of OCTOBER, 1854, several CARGOES of the following WOOD GOODS: Memel, 3 in. by 11 in. and 3 in. by 9 in. red deals; 3 in. by 11 in. and 3 in. by 9 in. crown white deals; Gottenburg, 3 in. by 11 in. red deals and 3 in. by 9 in. ditto; also 3 in. by 7 in. and 2½ in. by 7 in. battens; Christiana, 2½ in. by 7 in. battens; Dantzic, 3 in. by 11 in. deals; Quebec, 3 in. by 9 in. best floated red and bright pine, first and second quality; 3 in. by 19 in. to 3 in. by 26 in. floated and bright pine, first and second quality; St. John's, 3 in. by 11 in.; 3 in. by 9 in.; and 2½ in. by 7 in. spruce deals and battens. A large assortment of Quebec pipe staves, also Memel crown pipe staves. A quantity of Gottenburg 1½ boards. A large quantity of Gulf of Bothnia, 3 in. by 11 in.; 3 in. by 9 in. and 2½ in. by 7 in. first and second quality of deals and battens. Several parcels of deal ends, batten ends lath wood, and other wood goods. Many small lots will be offered for the convenience of purchasers at the commencement of the sale. The sale will commence in Mr. RICHARD YOUNG'S DEAL and TIMBER YARD at Wisbech, immediately on the arrival of the trains from London, Norfolk, Cambridgeshire, Peterborough, and Northamptonshire due about twelve o'clock.—Catalogues will be ready the day previous to the morning of sale. Four months' credit will be given for all bargains above 50*l.* on approved security. RICHARD YOUNG, Importer.

Wisbech, Sept. 23, 1854.

BUILDING LAND TO BE LET, close to the Regent's-park. There are several plots in this very favourable locality to let for 99 years, at low ground rents, for the erection of second houses, for which there is a great demand in this very genteel neighbourhood. They would, when completed, immediately let or sell.—For particulars, apply to Mr. F. ELHART, No. 9, Harrington-square.

BUILDING LAND.—TO BE LET or SOLD, several PIECES of LAND, very desirably situated for building, being near the Isleworth and Hounslow stations, comprising in the whole about twenty acres. Also some small plots of Freehold Land, from 40*l.* to 60*l.* a lot.—Apply to MOSES ADAMS and SON, Auctioneers and Surveyors, Isleworth.

BUILDING LAND TO BE LET, at CARSHALTON, Surrey, near the Station of London and Epsom Railway. Term of lease, 300 years. Low ground-rents, and advances made to the extent of 65 per cent. Apply to Mr. FRANCIS E. H. FOWLER, Architect, 4, Garden-court, Temple.

CRYSTAL PALACE.—TO BE LET or SOLD, an Estate of about THIRTY ACRES, close to the Crystal Palace. The estate is in the finest and most healthy position in Norwood for the erection of superior villa residences, with views over the surrounding country for twenty miles.—Apply to Mr. RANGER, Solicitor, 70, King William-street.

HAMPTON-COURT.—TO BE LET or SOLD, in large or small plots, some eligible BUILDING GROUND about half-a-mile from the above station, and in the village of East Molesey, near the parish church. The plots vary in depth from about 150 feet to 400 feet, and in price from 2*l.* 6*l.* to 3*l.* per foot frontage, but upon large plots a reduction will be made. Some of the plots are bounded by the river Mole, and nearly all are well stocked with fruit-trees. Also, TO BE LET, upon the same estate, the old-fashioned MANSION HOUSE. For particulars apply to Mr. BLETT, Esq. 104, Fleet-street, London; or at the Lodge, on the Premises.

TO BE LET, on Building Leases, for ninety-nine years, a large extent of valuable BUILDING LAND, situated in West Bromwich, possessing an extensive frontage to the Birmingham and Wolverhampton turnpike road, adjoining the Great Western station of the Birmingham, Dudley, and Wolverhampton Railway, and immediately opposite Sandwell-park. Every facility will be given to parties desirous of having out their own plots, which will be formed in large or small portions, as may best suit the wishes of applicants. For plans, and further particulars, apply to Mr. NICHOLL, Architect and Surveyor, 2, New-street, Mr. MORDEN, Q.C. of Sandwell; or F. T. HYNNE, Esq. 11, Great George-street, Westminster.

SUTTON, SURREY, five minutes' walk of the Station.—TO BE LET, on a Building lease for 99 years, a delightfully situated plot of FREEHOLD LAND, in the best of the town, having frontages to High-street of 120 ft. and to Beehill-street of 70 feet, well adapted for the erection of shops. For terms apply to Mr. EBBUTT, 31, High-street, Croydon.

TO BE LET, in the immediate Neighbourhood of New Oxford-street, PREMISES, consisting of a Dwelling-house and extensive Workshops, and other convenient Premises, occupied by a Cabinet-maker. Rent moderate.—Apply to Mr. F. SANDERS, Auctioneer, &c. 473, Oxford-street, Bloomsbury.

LARGE BUSINESS PREMISES TO BE SOLD or LET. They consist of a handsome Shop, Showrooms, and 4 Warehouses, built by the present proprietor, in the most substantial manner. A large trade has been carried on by the present proprietor, in the general Ironmongery and Barrow Trade. The premises are well suited for the Ironmongery trade, and if continued by any party in such trade, the stock could be had at a valuation. They are, however, well suited for any large business, and could be had without the stock. Information may be had, and the premises viewed, by applying to Mr. WILLETT, Lynn, Norfolk.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Lease. Plans advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. Architect, 8, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

BUILDING LAND to be SOLD or LET, on long building leases, in plots, at BALING, PUTNEY, WOODSIDE, near HORNSEY, WARE-ROAD, Hertford, BROCKLEY HILL, near Forest hill, ROUND-HILL PARK, Brighton, ENFIELD, and CASTLE-HILL, Reading.—Apply at the Offices of GEORGE MORGAN, Esq. 8, Chancery-lane.

A BARGAIN.—A small Plot of Freehold BUILDING GROUND, TO BE SOLD for 34*l.* Frontage, 15 feet by 73 feet deep, situated near Battersea-park, with a vote for the county of Surrey.—Address, A. B. 108, Dillington-street, Pimlico.

TO PAPER-STAINERS, BUILDERS, CORN-FACTORS, AND OTHERS.

TO BE DISPOSED OF, for a small consideration, the LEASE, at a very low rent, of a DWELLING-HOUSE and FRONT SHOP, with extensive premises in the rear, having the command of navigable water communication with the Thames. For particulars apply by letter to Mr. JAMES ATKINSON, 1, Royal Exchange-buildings.

WANTED, two or three Acres of FREEHOLD LAND, near to London, and near to a railway station.—Address, terms, &c. to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX Brothers, and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex. Saturday, September 30, 1854.

For prospectuses, and further information, apply at the Offices Marlborough-house, Pall-mall, London.

COMPETITIONS.

TO ARCHITECTS.

THE Committee of the Sheffield School of Art, being about to ERECT a NEW SCHOOL, have determined on offering the building of it to competitors, and hereby invite architects to send in plans, elevations, and sections complete. All designs are required to be on the same scale, namely, one-eighth of an inch to a foot, and must be sent in on or before the 30th of DECEMBER next, addressed to the Honorary Secretary of the School of Art, Sheffield. Competitors are requested to put a distinguishing mark or motto on their designs, but not to attach their names. The letters accompanying the designs must contain the names of the competitors, but the letters of the successful competitors only will be opened. The architect who shall produce the most suitable design will have the credit of the building, and the account of his design will receive a premium of fifty pounds. No plans will be received in competition which cannot be carried out for a sum not exceeding 4,000l.—For plans of the grounds and particulars of requirements, apply to the Honorary Secretary, Sheffield; or at the Office of "The Builder."

By order of the Committee,
BENJAMIN WIGHTMAN, Honorary Secretary,
Sheffield School of Art.

TO CONTRACTORS.

DRAINAGE of the BURGH of MAXWELLTOWN. The Commissioners will receive ESTIMATES for the above Work on MONDAY, the 23rd OCTOBER proximo. The Plans and Specifications may be seen in the hands of T. F. SMITH, Clerk to the Commissioners, by whom, or by Mr. W. M'GOWAN, Architect, Dumfries, all necessary information will be given.

Office of Commissioners, Maxwell-town,
28th September, 1854.

CONTRACTS.

COVENTRY LOCAL BOARD of HEALTH.—To SEWER CONTRACTORS and Others.—Persons desirous of CONTRACTING for the CONSTRUCTION of about 2410 YARDS of BRICK SEWERS, and 120 YARDS of PIPE BRANCH SEWERS in connection therewith, according to the plans and specification, which may, together with the form of Tender, be seen at the Office of Mr. ROBINSON, C.E. Bank Chambers, Hill-street, Coventry, between the hours of ELEVEN o'clock a.m. and ONE o'clock p.m. of each day, until MONDAY, the 23rd of OCTOBER next, are requested to send sealed Tenders, endorsed "Tender for Sewers," to the Town Clerk's Office, Little Park-street, Coventry, at or before TEN o'clock in the forenoon of the above-mentioned day. The Local Board will require the whole of the works to be completed on or before the 1st day of JULY, 1855, in such order and at such times as they may direct; and they don't bind themselves to accept the lowest or any Tender.—By order of the Local Board of Health,

THOMAS HALL TROUGHTON, Town Clerk.

Coventry, September 1., 1854

TO IRON-FENCING CONTRACTORS, SMITHS, AND OTHERS.

GLOUCESTERSHIRE FREEHOLD LAND and HOUSE SOCIETY. The Executive Committee are prepared to receive TENDERS for executing about 1,650 lineal yards of IRON HURDLE FENCING and 16 GATES on the Painswick-road Estate, near Gloucester. The drawings and specification may be seen at the Office of the Surveyor, Mr. JAMES MEDLAND, Clarence-street, Gloucester, on and after MONDAY, OCTOBER 2nd, between the hours of TEN and SIX o'clock. Tenders to be sent in on or before SATURDAY, OCTOBER 14th, by TWELVE o'clock, addressed to the Committee, and endorsed, "Tenders for Fencing on Painswick-road Estate." The Committee do not bind themselves to accept the lowest or any Tender.

By order of the Committee,
JAS. DAWES, Secretary.
6, King-street, Gloucester, Sept. 27, 1854.

CONTRACTS.

TO CONTRACTORS.

Royal Engineer Office, Chatham, 5th Oct. 1854.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall Mall, London, on or before THURSDAY, the 26th day of OCTOBER, 1854, from persons desirous of CONTRACTING with the Honourable Board of Ordnance for BORING for a better supply of WATER, in the Ordnance well, at Sheerness. Plans and specifications of the works are to be seen, and forms of Tender obtained on application at the Royal Engineer Office, Sheerness, between the hours of TEN and FOUR, till the 25th of OCTOBER, 1854, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately in the penalty of 2,000l. for the due performance of the Contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall Mall, London, and to be delivered free, endorsed "Tender for Works at Sheerness." No Tender can be admitted after the said 26th day of OCTOBER, 1854. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

TO CONTRACTORS

Royal Engineer Office, Chatham, 5th October, 1854.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before THURSDAY, the 26th day of OCTOBER, from persons desirous of contracting with the Honourable Board of Ordnance for providing additional ACCOMMODATION at the Royal Engineer Field Workshops, Melville Barracks, Chatham Place, and also for the erection of Two Cottages for Foremen, at the Royal Engineer Office, Chatham Lines. Plans and specifications may be seen at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR o'clock, till the 25th of OCTOBER, 1854, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound in 1,000l. for the due performance of the contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham." No Tender can be admitted after the said 26th day of OCTOBER, 1854. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

LOCAL BOARD of HEALTH, KINGSTON-UPON-HULL.—CONTRACT for SCAVENGERING, STREET SWEEPING, CARTAGE WORKS, &c.—The Local Board of Health, at Kingston-upon-Hull, are ready to receive TENDERS for a CONTRACT for the performance of the following Works in the whole Borough, or any part of the three several districts into which it is divided:

1st—The COLLECTION of NIGHT SOIL, in the morning, with Ashes, &c. mixed, in Dust Carts.

2nd.—The COLLECTION of DRY DUST during the daytime by Dust Carts.

3rd.—The SWEEPING of the STREETS, and the Removal of Snow or Mire & Sweepings.

4th—The REMOVAL of FILTH from the Cleansing of Sewers, and all Dung as may arise therefrom.

5th—The WATERING of STREETS.

All of these to be by the contractor. The Tender may include the CARTAGE of ROAD MATERIALS, &c.

The Tenders are to be made separately, either on the basis or condition of the Night Soil, Ashes, House Refuse, and Dust, becoming the property of the Board, or otherwise upon the basis of becoming the property of the contractor.

The population of the borough is about 84,000.

The Local Board of Health gives the exclusive power of collection to the contractor.

The duties of the contractor or contractors, in one entire contract, will be required to be performed to the satisfaction of the proper officers of the Board, and subject to the bye-laws of the Board, and such fair per-centage of two or three years' amounts, until the expiration of six months' notice from either side to terminate the contract.

The specifications of the works to be performed, the regulations and conditions to be observed, and the mode of Tendering, may be seen by application at the offices of the Surveyor of the Board, at the Southcates-hall, Hull, between the hours of TEN o'clock in the forenoon and FOUR o'clock in the afternoon, on SATURDAY, the 14th OCTOBER next, on or before which the sealed Tenders are to be delivered, addressed to the undersigned Clerk of the Board, at his office, 5, Dagger-lane, Hull.

The Board does not bind itself to take the lowest or any Tender.

By order,
ROBERT WELLS,
22th August, 1854. Clerk to the said Local Board.

TO BUILDERS AND ROAD CONTRACTORS.

PERSONS desirous of CONTRACTING for the ERECTION of a NEW BRICK BRIDGE, and raising the road at Lewisham, are requested to deliver TENDERS for the same at the Offices of Messrs. ASHPITEL and WHICHCORD, Architects, 2, Pook's-court, Old Jewry, City, We minster, on or before TWELVE o'clock of THURSDAY, the 12th OCTOBER next.—Plans, specifications, and Conditions may be seen at the above Offices every day between the hours of TEN and THREE.—The lowest Tender will not necessarily be accepted.

JOHN WHICHCORD.

TO BUILDERS AND OTHERS.

PERSONS desirous of sending in TENDERS for the whole of the works proposed in order to effect the ENLARGEMENT and RESTORATION of the CHURCH of ST. MARY, at DARLESTON, in the county of Derby, may see the plans and specification at the Offices of the Architect, Mr. THOMAS LARKINS WALKER, 6, New-street, Leicester, or at the Grove School Room, at Darleston, on and after WEDNESDAY, OCTOBER 11th. Bills of quantities and forms of Tenders may be had of the Architect on application either personally or by letter, on and after WEDNESDAY, OCTOBER 11th, 1854. Sealed Tenders to be delivered at the Rev G. SEARL RENSWORTH, Vicar, on or before WEDNESDAY, OCTOBER 18th, 1854.

[For remainder of Contracts see next page.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS. - To BUILDERS, CONTRACTORS, and OTHERS. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 66. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 67. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 68. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 69. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 70. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 71. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 72. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 73. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 74. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 75. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 76. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 77. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 78. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 79. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 80. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 81. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 82. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 83. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 84. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 85. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 86. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 87. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 88. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 89. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 90. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 91. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 92. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 93. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 94. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 95. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 96. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 97. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 98. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 99. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 100. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

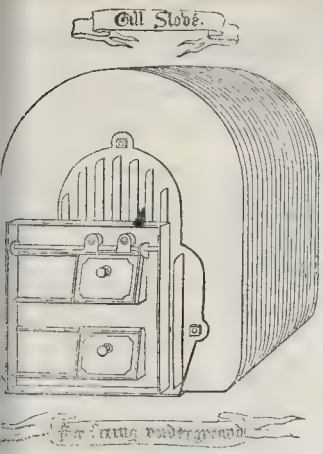
Lot 101. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 102. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 103. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 104. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 105. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.



Lot 106. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 107. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 108. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 109. Commencing with or at a brick sewer in Chesterfield-street, Mayfair, at the Pimlico district, and terminating with or at a brick sewer in Grosvenor-street, Grosvenor-square, at the Tyburnia district, both of the said sewers being in the parish of St. George, Hanover-square, in the County of Middlesex, and comprising in the whole about 1,000 lineal feet run measure.

Lot 110. Commencing with or at a brick sewer in Chesterf

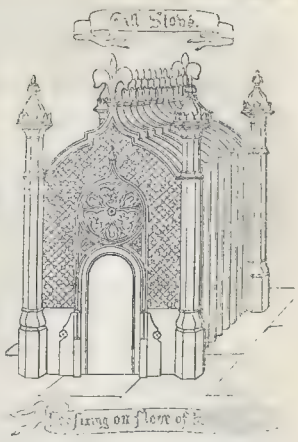
STUART AND SMITH'S

PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



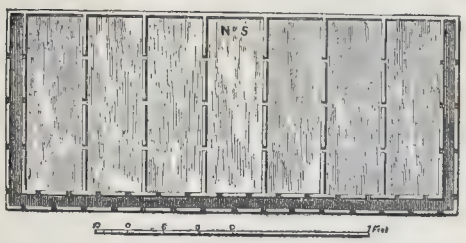
STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.



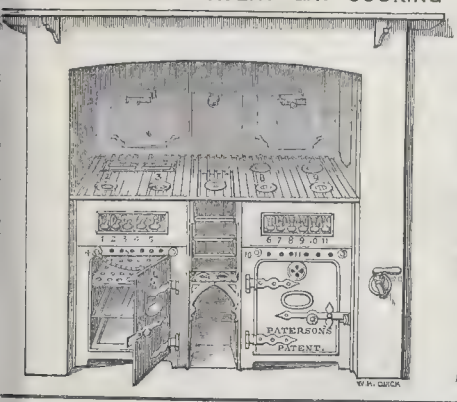
HAYWARD'S IMPROVED

COAL-HOLE PLATES.

ILLUMINATING GRATINGS.

PAVEMENT LIGHTS.

COAL-HOLE PLATES, with Wrought Eyes fitted; ILLUMINATING with Glass Lenses, 6s. each; Ditto, plain Iron, solid, 2s. 9d. each; Ventilating, 3s. each



N.B. The Flange A prevents them from shifting when trodden on or being forced up.

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

PATERSON'S PATENT GAS COOKING APPARATUS.

May be seen by applying to the Patentee,

A. PATERSON,

53, VICTORIA-STREET,

WESTMINSTER,

Of whom LICENSES may be had for making them.

On reference to the plate, it will be seen that roasting can be carried on by the open fire, if required; thereby rendering this apparatus the most compact and efficient of any that has yet been brought out.

THEY ARE MANUFACTURED BY

T. WALLER and CO.

Ratcliff Ironworks, Rose-lane, Ratcliff, near the Stepney Railway Station.

Where they may be seen in operation, and where prospectuses and every information concerning them may be obtained.

Also Manufacturers of every description of

GAS STOVES, BATHS, OPEN AND CLOSE KITCHEN RANGES, HOT WATER APPARATUS, METAL CONSERVATORIES &c.

N.B. The Trade supplied with Iron Sash Bars, bent to any shape or design

See "The Builder" of Sept 1st

DR ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at T. EDWARDS' and SON'S, Poland-street, Oxford-street. By this grate a smoky chimney is cured, no chimney sweeping is required, and a saving of at least thirty-five per cent is effected in the consumption of coal. The principle is also now carried out with complete success in kitchen ranges, and hot-air pedestal stoves. Old grates are altered on this principle. Prospectus sent on application.

THE ONLY STOVE WITHOUT a FLUE.

JOYCE'S PATENT—Plain, from 12s. to 45s.; Ornamental from 31s. 6d. to 10 guineas for warming halls, passages, greenhouses, water-closets, shops, store-rooms, and all places requiring occasional warmth. To be seen in use at the sole Proprietor's, WASH, Ironmonger, &c. 253 Oxford-street, and at the City Depôt, 15, Newgate-street, London. PATENT PREPARED COAL for the above Stove, 50s. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and smoothing irons, with perfect cleanliness, for twelve hours, with one bushel of coke or cinders. Price 12s.

** Prospectuses, with drawings and report, forwarded free

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 7, requires perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by DANIEL BAILEY, 272, Holborn.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELE and STEPHENS', Nos. 5 and 6, BROAD-STREET, BLOOMSBURY. The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Hot Blast, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT GAS-IRON GAS and WATER PIPES Office, No. 7, Size-lane, London.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, have obtained the Great Exhibition Prize Medal, are of beautiful Enamelled Porcelain, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show. COTTAM & HALLEN, 2, Windsor-street, Uxbridge-road, London.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patented invention of this description.

Manufactory of KITE'S Patent Cast-iron Self-acting Chimney Cans, for the prevention of Bad Smoke and Fire. Price 2s. each.—JAMES BARTON, Iron Founder, Smith, &c. 370, Oxford-street, a few doors east of the Pantheon.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co. 83 and 85, Bridge-road, Lambeth, where a great variety are always on view for church, park, railway, office, and other gates and doors of large and small dimensions. A set of patent hinges with these buttons as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and self-acting spring hinges, and super or gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, steam-winds, &c.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both expensive and excessive in power. Plans sent on application. Estimates given for complete saw-mills for exportation or otherwise.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with Hooper Bells, Zinc Tubing, Copper Wire, Chandeliers, Brackets, and Pulleys of all descriptions. Wholesale Brass and Iron Tube Composition, Iron and Brass Casting, Grate Bars, Bright and Lacquered Cast Table Rods, Desk Rods, &c.

Japanned Tin Plates for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18	oz. per foot super.		
No. 12	"	"	20 oz.	do. do.
No. 13	"	"	24 oz.	do. do.
No. 14	"	"	28 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

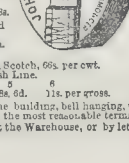
PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.



Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Debruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists, &c. to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, or EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRONMONGERS, ZINC-WORKERS, &c. supplied with Sheet Zinc, Perforated Zinc, Tubing, &c. of its quality, at prices lower than any other house, at WILLIAM HARMER'S Iron Metal, and Zinc Warehouse, 1, New Peterreet, Horseferry-road, Westminster. Cast-iron rain pipes, sashweights, railing bars, &c.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 6 to 9 inches.
B. An eccentric notched lever to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw fast. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more stability, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to move more quickly and safely used than any yet brought out, and at the same time it is light and portable.

BLACK LEAD and ULTRAMARINE BLUE, North German, FOR SALE, in quantities to suit purchasers, by F. M POKORNY, 15, Fish street hill, City

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES. Just arrived, per *Roberto, Vthan, Batty, Natalie,* and *Harberdina*, 150 Blocks of Marble, and 12,000 feet of Sawn Slab, Mortars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for York-shire Paving, Portland and Derby Stone, Bancor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Timber Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be supplied at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-Bridge

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 6, Crescent terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any other.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

TO SCULPTORS MASONS AND BUILDERS

MESSRS. BRINE (BROTHERS) beg to inform all consumers of Marble, that they have entered into contract with Count LAZZONI and SONS, of Carrara, for the PRODUCE of their QUARRIES, which are known to be the purest in Italy, and the first two cargoes, consisting of Statuary, Veined, and Sicilian, are now unloading at their Depôt, Grant Northern Wharf, Canal-road, King's-cross, where sales may be found Marble slabs for every description, sawn by their powerful machinery. H. W. WILKINS, Manager.

TO STONE MERCHANTS AND CONTRACTORS.

FREE-STONE QUARRIES TO BE LET on lease, situated on the east coast of Scotland. The quarries have been long worked, and are among the principal ones in the north of Scotland. They are now in first-rate working order. The stone is well known, and commands an extensive sale in this country and abroad. There is no land carriage, and ships of a heavy draught can load at the quarry pier.—For specimens and particulars, apply to Mr. H. SMITH, 23, Southampton-buildings, Chancery lane, London, before November 30.

CRYSTAL PALACE GENERAL ARRANGEMENTS.—The Palace is opened on Mondays at 9 a.m and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m. On these days the charge for admission is One Shilling. It is opened on Saturdays at noon, on which day the charge for admission is Five Shillings.
SPECIAL TRAINS will run from London Bridge to the Crystal Palace Station every week-days as follows: at 7.10, 8.10, 9.10, 9.40, 10.10, 10.40, 11.10, 11.40 a.m. and 12.10, 12.40, 1.10, 1.40, 2.10, 2.40, 3.10, 3.40, 4.10, 4.40, 5.10 p.m.; returning from the Crystal Palace at 11.56 a.m and 12.26, 12.56, 1.26, 1.56, 2.26, 2.56, 3.26, 3.56, 4.26, 4.56, 5.26, 5.56, 6.26, 6.56, 7.26, 7.56 p.m.; and further additional trains will run whenever the traffic renders it necessary.
The 7.10, 8.10 and 9.10 a.m. Down Trains, and the 4.56, 5.56, 6.56, and 7.56 p.m. Up Trains call at New Cross and Forest-hill. The Citizen and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London-bridge, at least every ten minutes during the day, and at those hours, when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at these piers.
The following are the fares to the Crystal Palace and back, including admission to the Palace:—

Shilling Days	First Class,	2*s.* 6*d.*
" "	Second Class,	2*s.* 0*d.*
" "	Third Class,	1*s.* 6*d.*
Saturdays	First Class,	7*s.* 0*d.*
"	Second Class,	6*s.* 6*d.*
"	Third Class,	6*s.* 0*d.*

In order to afford every facility to the public, and to prevent any delay at London-bridge, arrangements have been made to issue the above tickets previously, at offices in different parts of London. Passengers taking their tickets at these offices will be admitted to the London Station by a separate entrance.
Fares between London-bridge and the Crystal Palace Station, not including admission to the Palace:—

Single Tickets	First Class,	1*s.* 3*d.*
"	Second Class,	1*s.* 0*d.*
"	Third Class,	0*s.* 9*d.*
Return Tickets	First Class,	2*s.* 0*d.*
"	Second Class,	1*s.* 6*d.*
"	Third Class,	1*s.* 0*d.*

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 43, Regent-circus, Piccadilly.
Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1*s.* 6*d.* each. These tickets can only be issued upon production of a season ticket to the Crystal Palace.
Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.
No change can be given either at the London-bridge, or at the Crystal Palace Stations; passengers must therefore provide themselves with the necessary silver.
Children under twelve years of age will be charged only half the above rates.
Season tickets, including conveyance by railway, 4*l.* 4*s.* each; without conveyance by railway, 3*l.* 3*s.* (the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,
August, 1854.

LOANS.—Persons desirous of obtaining ADVANCES, from 50*l.* to 250*l.* upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES.—Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6*d.* each copy, or 1*s.* per post.
CHARLES JAMES THICKE, Resident Secretary.

TO BUILDERS AND CAPITALISTS.

WANTED, 500*l.* to 1,000*l.* to assist in carrying out a PATENT BRICKMAKING MACHINE, of great power and efficiency. The machine is capable of grinding, tempering, and moulding fresh-dug clay, at one operation, and producing from 15,000 to 50,000 best stock bricks per day, according to quality of clay. The patentee, or any of the above sums, if a builder, will be entitled to an unlimited supply of brick for his own use, delivered on the bank of the Thames, within five miles of London, at the rate of 2*s.* per 1,000; and also entitled to one eighth or one-fourth of the general profits of the patent right and brickmaking.—Letters (prepaid), addressed to A. B 24, Adelaide-street, Leicester-square, London, shall be immediately attended to.

MONEY LENT on PERSONAL SECURITY, LEASES, LIFE POLICIES, &c.—Sums from 5*l.* to 200*l.* advanced two or three days after application, for two years, one year, or six months, repayable any day in the week, by weekly, monthly, or quarterly instalments; and good bills discounted. Charges moderate and strict confidence observed.
LONDON and PROVINCIAL LOAN and DISCOUNT COMPANY, Private Office, 69, Goswell-road, London. Open daily from nine till eight, thus avoiding inconvenience or publicity.—Forms of application and prospectus gratis, on receipt of stamped envelope. H. FLEAR, Manager.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. beg to inform Railway Directors, Landed Proprietors, Noblemen, Gentlemen, and Others, that they EXECUTE every description of professional work on the most reasonable terms. Railways, roads, water-works, &c. planned, surveyed, levelled, and completed. Engineering and architectural plans, sections, and designs, prepared and executed. Estates, manors, parishes, and townships, surveyed and mapped. Land, timber, buildings, &c measured and valued.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING.—Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. beg to inform gentlemen desirous of acquiring a thorough practical knowledge of the profession, that they have refitted up their OFFICES with every requisite, including models and instruments of every description. The COURSES are all remodelled and enlarged, embracing the latest improvements. Gentlemen who cannot attend at the offices can be attended at their residence in any part of the country by Mr. SMITH or Mr. LEWIS.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent benefit is guaranteed upon the ordinary method of cutting. For particulars of prices, and specimens of work done by the machine, apply to J CHACK, Sole Patentee, Veneer-cutting Works, 44, Robert-street, Chelsea, adjoining the Knightsbridge Saw-mills.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W NAYLORN'S staining may be had at the Factory, 44, and 45, James-street, Oxford-street; also Manufact rer of Improved Knotting and Decorative Varnishes.

TO THE CLERGY AND TO ARCHITE TS, BUILDERS, &c

STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and deleterious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, giving the effect of Oak, Mahogany, or Satin Wood. Those who noticed the Entrance Doors of the Great Exhibition, painted in imitation of Oak with these stains, would be struck with their beautiful effect.—Prospectuses and testimonials may be had at the Factory, as above, and of Messrs. ARROWSMITH and Co 59 New Bond street.

WOOD and STONE CARVING WORKS, CAMBRIDGE -TO BE SOLD, cheap, on account of its convenient height for the show-room, a NEW CAEN STONE FONT, and CARVED OAK COVER, complete, executed in the best manner, being intended for exhibition. It is copied from the ancient one at Castle Acre Church, Norfolk, and would form an imposing object in a good position.

For price, and Engraving to a large scale, apply to Mr. RATTEE,

Manufacturer of Church Fittings, Organ Cases, Antique Furniture, &c. and Contractor for the general Restoration of Churches.

PATENT OFFICE, 4, Trafalgar-square, Charing cross.—Inventors may be furnished gratis with the DATE and TITLE of any PATENT granted from 1617 to the present time, and a CIRCULAR of INFORMATION as to the new Patent Law, and the facility of protection for inventions in the United Kingdom and foreign countries, by applying personally or by letter, prepaid, to Messrs PRINCE and CO.

THE CHOLERA and LIFE ASSURANCE.
TO PERSONS of LIMITED INCOME on a former occasion, when this country was visited with the fearful scourge of Cholera, the Directors of the PROVIDENT CLERKS' ASSURANCE ASSOCIATION earnestly called attention to the danger of neglecting the easy and certain provision for a deceased family which Life Assurance affords; in many cases their appeal was listened to, and numbers were thereby saved from having their sorrows increased by the privations of want and poverty. On the present occasion they feel called upon to urge upon those especially whose income does with them the imperative necessity an even duty of making such provision. To all else the above associate offers even at this late stage which an assurance office can afford, while to clerks its benefits are both important and exclusive; not less than forty aged clerks and widows being already in receipt of annuities varying from £7 to £50 a year each from the PROVIDENT CLERKS' BENEVOLENT FUND. Any information as to the progress of the association, its rates of assurance, &c may be obtained of the actuary, or at the Chief Office, 15, Moorgate-street, London.—By order of the Board.

This day, post 8vo. with frontispiece, price 9s.
THE POETRY OF CHRISTIAN ART.
Translated from the French by A. F. RIO.
"One of the most profound and beautiful disquisitions on the subject."—*Literary News.*
"This is a charming volume. Every page is full of animation and interest."—*Builder.*
"Not only one of the most valuable, but also one of the most charming books which has ever been offered to us on this subject. It is a history, full of great interest, of the rise and progress of the art of painting, in its connexion with the church, given by one who is eminently qualified for the task. He has, as an artist, a singularly delicate perception of the distinctive merits of the old Catholic masters. We earnestly recommend this who e work to the attention of our readers, assuring them that we are offering them, in its perusal, an enjoyment of no common description."—*The Ecclesiologist.*

KELLY'S PRACTICAL BUILDERS PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work, with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.
London; published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.
Of whom may be had, New Editions, in Quarto, of the following Architectural Architectural Works

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 35s; containing upwards of 120 Steel Plates, and numerous Wood at Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING. revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s; containing upwards of 70 Steel Plates and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the Grecian style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By H. Brooks, Architect. Beautifully engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Twelve parts at 3s. 6d. or in boards, 42s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches Chapels, Schools, Almshouses, Gas Works Markets, and other buildings for public purposes. By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE containing a series of Designs for Decorative Apartments with taste, and suited to the various styles of architecture. By H. W. and A. Arrowsmith, House Decorators to her Majesty. Ten Parts, at 3s; or in boards, 33s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M Higgins, Esq. Accompanied by actual specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 33s.

THE ENGINEERS' and MECHANICS ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HEBERT Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication in 1836, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 30s.

The Builder.

SATURDAY, OCTOBER 7, 1854.

IN continuation of the inquiry commenced last week, we return to a consideration of the Schools and School-houses of the United States.*

Mr. Barnard pleads strongly, and with justice, for a proper gradation of schools. We have already alluded to the Primary Schools, which may be supposed the fit receptacles for children from three to eight years of age. The next grade might be called Secondary Schools, designed to receive children of about eight years old, and carry them on till they are ready for the High School, which ought to afford that comprehensive course of instruction which will fit the pupil for the world's practical struggle; or if he be designed for a learned profession, carry him to the threshold of college. The author also thinks that intermediate schools or departments are needed in large districts, to receive a class of pupils who are too old to be continued, without wounding their self-esteem, in the school below, or interfering with its methods of discipline and instruction, and are not prepared in attainments and habits of study, from irregular attendance, to be arranged in the regular classes of the school above.

Some of these divisional arrangements are no doubt solely applicable in the country for which they are intended. But Mr. Barnard hints at one feature which is of equal importance in America or our own agricultural districts. This is a school or *department* for those who cannot attend school regularly, or for only a short period of the year, or who may wish to attend exclusively to a few studies. There is no place for this class of scholars in a regularly constituted, permanent school.

The school systems of Boston and Philadelphia are magnificent. Before jotting down some notes on the edifices themselves, we shall present in a condensed form, some statistics which will give a comparative idea of the cost and elaborate mechanism, for training purposes, kept up in those quarters.

All the public schools of Boston are under the care and superintendence of a board or committee, consisting of the mayor, the president of common council, and twenty-four other persons, annually elected, two for each ward.

The board employs a superintendent, to act under their control and direction, at a salary of 1,500 dollars; a primary school committee, to take particular charge of the primary schools; a committee of five members on the Latin and English high school; a committee of three members on each grammar-school; and a committee on school-houses, also of three members. The teachers are elected annually by the board, and their salaries are fixed for the year.

The system now (1854) embraces 196 primary schools, 22 grammar-schools, 1 English high school, 1 Latin school, and 1 normal school.

The primary schools were instituted in 1818, and now include about 12,000 children, over four and under eight years of age, under female teachers. In these schools the alphabet, pronouncing and spelling words, numeration and combination of numbers, the stops and marks, mental arithmetic, and reading, are attended to. The cost of these schools, in 1853, for the salaries of teachers, was 62,508·82 dollars, or 0·45 dollars per scholar; for incidental expenses, 22,231·46 dollars, or 1·85 dollars per scholar; or altogether 7·30 dollars per scholar, exclusive of expenditure for school-houses.

* See p. 535, *ante*.

There are at present twenty-two grammar-schools (including three independent schools in the same building, and bearing the same name as the other schools), with 10,237 scholars. These schools are not at present organised on a uniform plan; but efforts are being made to constitute each grammar-school of about 700 to 800 children, divided into twelve or thirteen equal divisions, of about sixty pupils each, and each division into four large classes. Each school is to be under the charge of one principal teacher, with a requisite number of assistants, one to each room. The course of instruction embraces the common branches of an English education. In these schools the boys remain until they are fifteen years of age, or until they pass to the English, high, or Latin school. Girls can remain till they are seventeen. In 1852-3, the cost of the grammar-schools, for salaries and teachers, was 130,531·18 dollars, or 12·63 dollars per scholar; 35,849·82 dollars for incidental expenses; or 3·47 dollars per scholar; making together 16·10 dollars per scholar, exclusive of the expenditure on school-houses.

The system of public schools in Philadelphia, has grown up in a brief period of time, from very small beginnings to its present gigantic, yet harmonious proportions.

The Grammar-school House in New-street, Philadelphia, is a good specimen of the peculiarities which distinguish the most recently erected buildings in that city. It was built according to plans and specifications made by Mr. Samuel Sloan. It is 81 feet 6 inches in front, by 65 feet 6 inches deep, and three stories high, each story being 15 feet in the clear. The basement, windows, and door trimmings are of the best blue marble, finely cut and polished, and the walls are of the best pressed brick. All the outside walls are laid with a hollow space of 4 inches, the inner and the outside walls being tied together with alternate bricks in the heading courses.

Instead of one large room, with two or more class-rooms in connection on each floor, this school has each story divided into four apartments, of a size suitable for the accommodation of the number of pupils assigned to one teacher, with *moveable glass partitions*. By this arrangement the principal can have a full view of all the pupils and assistants on the same floor, while each division is protected from annoyance or interruption from the exercises of the other. By removing the glazed partitions,—one half of which is admitted into the wainscotting above, and are so hung as to balance each other, the several apartments are thrown into one, and the whole school is then within the hearing and voice of the principal. The building is warmed by three of Chilson's furnaces of the largest size, and ventilated by a shaft extending from the cellar to the top of the roof, with lateral flues and openings from each story, with a stove at the base in the cellar to warm the shaft, to quicken the discharge of the foul air, both in winter and summer. Those of our readers who are specially interested in the subject of ventilation will find this patent of Chilson's fully described in the treatise. The Boston and Philadelphia modes of ventilation differ, the account of the practice in the former city being prefaced by a report of the School Committee appointed to investigate this important question. Their views seem to have been most thoroughly developed in the heating and ventilating arrangements of the Primary School in Sheafe-street, of which building Mr. Barnard presents transverse sectional elevations.

The plan and description of the Bowdoin Grammar School-house (also in Boston), present the following features:—It was completed in 1848, and with the yard occupies an area of about 75 feet by 68 feet, bounded on each of the four sides by a street. It is built of brick, with a basement story of hammered granite, and measures 75 feet 9 inches extreme length, by 54 feet 6 inches extreme breadth—having three stories, the first and second being 13 feet, and the third, 15 feet high in the clear.

The third story is finished into one hall, 72 feet long by 38 feet wide, with seats and desks for 180 pupils. On the south side of this hall there are two recitation-rooms, each 16 feet by 12 feet, and a room for a library, &c. There are three rooms of the same size on the two floors below.

The second story is divided into two rooms by a partition wall, each of which is 35 feet by 38 feet, and accommodates 90 pupils, and so connected by sliding doors that all the pupils of both schools, can be brought under the eye and voice of the teacher.

The first story corresponds to the second, except that there are no sliding doors in the partition, and no connection between the room except through the front entry. The two rooms on this floor have each seats and desks for 100 pupils.

Chilson's furnaces are employed. But to accommodate pupils who come to school with wet feet or clothes, there is an open fire in a grate in one of the recitation-rooms.

This school is for girls only, and consists of two departments, one of which is called the grammar department, and the other the writing department; the master of each department being independent of the other.

In the former article, we alluded to the Quincy Grammar School, when quoting the remarks made by the mayor of Boston, at its opening.

"The ground plan is in the form of a cross, the exterior dimensions of the body being 80 feet by 58 feet, the end fronting on Tyler-street. The wings are 12 feet in front by 36 feet deep. It is four stories high, with a basement 8 feet in the clear, for the furnaces and fuel, and an attic for gymnastic exercises.

These four school-rooms are of nearly the same size, averaging about 31½ feet by 26½ feet, and 13 feet high. Each room is lighted by two windows at the side, and two at the end, and has a platform for the teacher, 24 feet by about 5½ feet, with one end towards the entrance from the corridor, and on the other end is placed a book-case, 3½ feet by 8 feet, with glazed doors, facing the entrance.

Each room accommodates fifty-six pupils, one desk and chair being placed on a small moveable platform for a monitor.

The building is warmed by four furnaces placed in the basement, two being placed at the middle of each end, each being intended to warm the three rooms immediately over it, the cast iron chimneys being relied upon for heating the hall.

Emerson's system of ventilation has been introduced since the building was finished, each room having a separate air-duct to the roof, 14 inches square."

The history of public schools in New York, shows an advance as rapid as any of those cases already cited. Prior to 1805, the only institutions of this nature were those sustained by the different religious sets, with the addition of the Female Association for the relief of the poor, set afoot in 1802. Those means were scanty, and the course of construction wholly inadequate. In 1805, a school was organized and incorporated by the Legislature, for behoof of the children of those who, belonging to no religious denomination, were without education. This was taught on the Lancasterian system. Three years later the institution was placed upon a larger basis by government, as the "Free School Society of New York;" the corporation gave a site, and entrusted to the society's keeping, the education of the almshouse children. The methods of instruction were modified in 1821, in consequence of the correspondence of a committee with distinguished European educators.

In 1828, the first primary or infant school was established with signal success; and the following year the scholars of the public school society were placed on the basis of "common schools," open to all, not as a matter of charity, but of right, and supported, like other public interests, by a general tax. This tax was *one-eighteenth of one per cent.* and was the first tax raised by the city of New York for the support of common schools; the memorial by which the attention of the common council was called to the matter, having been signed by the wealthier citizens.

After a variety of modifications and enlargements, the schools, and property of the public school society, were at length, in 1853, transferred to the "Board of Education;" and the society, after years of faithful, disinterested, and useful service in building up an imposing system of public instruction, was abolished.

The Free Academy of the city of New York was established by the Board of Education, in 1847, in pursuance of authority granted by the Legislature on the memorial of the Board, on condition that the question of its establishment should be submitted to the people of the city, and a majority of the votes given should be in favour of the proposition.

"The dimensions of the building are as follow:—The length of the building, exclusive of all projections, is 125 feet, and the breadth 80 feet. The height, to the eaves, 65 feet, and to the top of the gable, 100 feet. The height of the towers, 110 feet.

The building is divided into a basement, three stories, and a great hall under the roof. The basement is 9 feet in height, and is arched to afford ground for exercise in bad weather. In it, also, are the janitors' lodgings, the chemical laboratory, and the closets for the hats and clothes of the students. The first, second, and third stories are divided into four great rooms by two wide, spacious halls, which are carried through the centre of the building longitudinally and transversely. Two of these rooms, on each floor, are again divided, affording smaller rooms for recitation, &c. Above these stories is the great hall, 125 feet long by 60 feet in breadth, divided by the king and queen posts of the roof, which are made ornamental, into three aisles, the centre one of which is 40 feet in height, and the two side aisles each 20 feet in height. The ceiling of this room is of wood immediately under the roof, of which it forms part, and it is ornamented with carved ribs of wood, in the manner of the old college halls at Oxford and Cambridge."

Our professional readers will have gathered from some of these data, that the style adopted in this building, is that of the town-halls and colleges of the fourteenth century. The architect, Mr. Renwick, of New York, in a letter to the president of the Board of Education, states his reasons for the selection of this style.

Regarding the proper development of their public high schools, all classes of American educators, however much they may differ on other points, seem anxious and agreed. As we have already explained, this class of school is intended for pupils who have advanced from the lower grades. It is a common school, in the same sense as the district and primary ones, but its special purpose is to make *good* education *common*. The school, to be common practically, must be both cheap and good. To be cheap, its support must be provided for wholly out of a fund, or by a public tax. And to justify the imposition of a public tax, the whole community must share in the benefit. These institutions must exert a powerful influence for good if well managed, and there seems to be general satisfaction concerning their administration and results. The description of a building of this class is the last excerpt we shall at present take from Mr. Barnard's Epitome on School Architecture. The Latin and English High School of Salem, in its interior has no parallel in the country for ornament, and a certain blending of elegance with usefulness in its appointments. In these features it somewhat resembles the schools of Holland and Germany, which often contain paintings of no inconsiderable excellence and value, that the eye may be educated as well as the mind, and the union of æsthetics and practical knowledge may, if possible, be effected.

The Latin School is believed to be the first Free School established in the United States, and probably in the world, where *every person* within certain geographical limits, and possessing certain requisites of study, has an equal right of admission, free of cost. It was founded in 1637, and has continued without interruption, giving a thorough preparation to students for college, to the present day. The English High School was established in 1827.

The walls of the Latin Grammar School are enriched and adorned with inscriptions in the Greek and Latin language and character. These are not merely apothegms of wisdom, but mementoes of duty; they are fitted to inspire the pupils with noble sentiments, and are the appropriate "*Genius of the Place.*"

The interior of the English High School is adorned in a manner no less appropriate and useful.

In the centre of the ceiling is the circle of the zodiac, 29 feet in diameter. The ventilator, 3½ feet in diameter, represents the sun, the spots being designated upon the nucleus in conformity with the latest telescopic observation. The divergence of the solar rays is also fully exhibited. The earth is represented in four different positions, indicating the four seasons. The moon also is described in its orbit, and its position so varied as to exhibit its four principal changes. The globular figure of the earth is shown, and lines are inscribed upon it representing the equator, tropics, and polar circles The hour lines are also marked and numbered The border of the circle represents upon its outer edge the signs of the zodiac, with their names, and within, the names of the months. The signs are divided into degrees, and the months into days, both of which are numbered. The thirty-two points of the compass are marked upon the inner edge, the true north and magnetic north both correctly indicated, — the variation of the needle having been ascertained by a recent series of observations.

The circle of the zodiac, as thus described, being enclosed within a square panel, the exterior spaces in the four angles are filled up with other astronomical illustrations.

Upon the four sides of the room, in the space above the windows and doors, eight panels are described, containing as many diagrams, which illustrate physical phenomena.

The diagram in the large panel upon the north side of the recitation platform, represents the relative height of the principal mountains, and the relative length of the principal rivers on the globe. The mountains and rivers are all numbered, and scales of distances are attached, by which the heights and lengths can be readily ascertained. The diameter and rotation of the sun are inscribed upon the edge of the circular recess, beneath the ventilator.

Over the frontispiece, which surmounts the recess upon the teacher's rostrum, is a scroll, bearing the inscription—

"Order is Heaven's first Law."

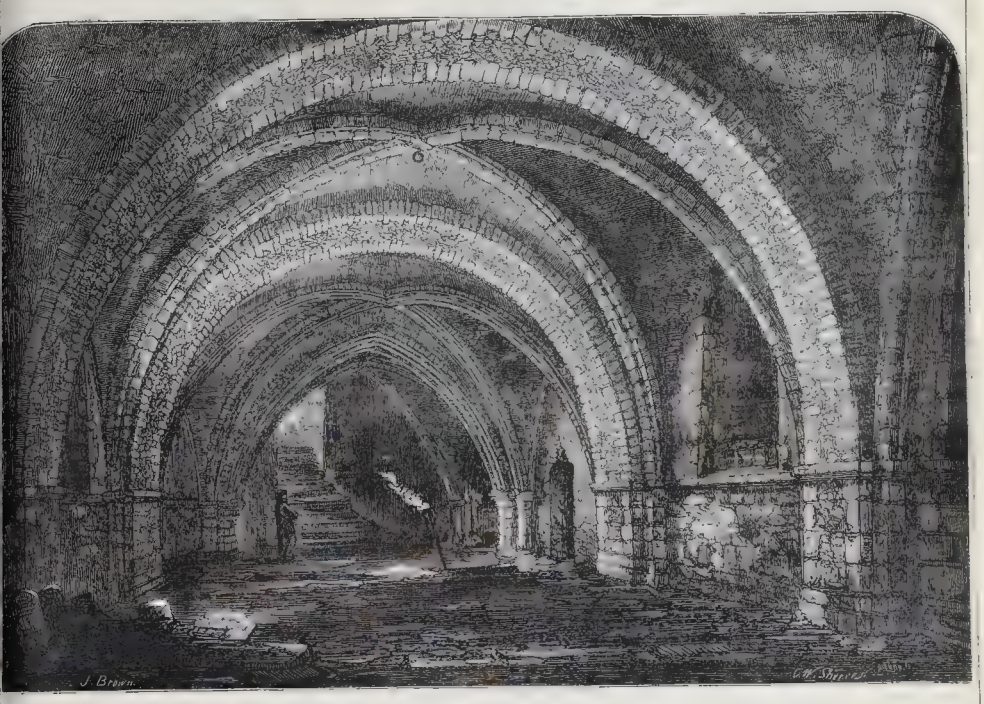
A motto equally appropriate, whether viewed as explanatory of the celestial phenomena which are figured upon the walls, or as suggesting the principle which should guide the operations of the school.

THE PRIORY CRYPT OF ST. JOHN'S CHURCH, CLERKENWELL.

Among other antiquities of the Knights Hospitallers' Priory in Clerkenwell still remaining, is the crypt beneath St. John's Church, which is situate in the north-east angle of St. John's-square. In continuation of our series of crypts remaining in London we give a view of it, and we subjoin some particulars, for which we are indebted to Mr. W. P. Griffith.

The original church consisted of nave and aisles, transepts, a great bell-tower, graven, gilt and enamelled, a choir, &c. The present church is a part only of the ancient choir, and beneath it is the crypt, which is of the semi-Norman and Early English periods. With the exception of the crypt, all the priory (including St. John's Gate) was destroyed in 1381 by the rebels of Essex and Kent, who set fire to the buildings, causing them to burn for seven days. After this calamity the priory was rebuilt, Prior Docwra completing it in 1504. Docwra's church was in the Perpendicular style, and grafted upon the Early English crypt. Shortly after the restoration of the priory, Henry VIII. suppressed it: it was, however, not destroyed, but "employed as a store-house for the king's toils and tents, for hunting, and for the wars," &c.; and in the 3rd of King Edward VI. the church, for the most part, the great bell-tower, &c. were undermined and destroyed with gunpowder, and the stone was employed for building the lord protector's (Somerset) house in the Strand. That part of the choir which remained, with some side chapels, was closed up at the west end (next St. John's-square), and otherwise repaired, by Cardinal Pole, in the reign of Queen Mary; and Sir Thomas Tresham, knt. was made prior, with restitution of some lands; but it was again suppressed in the first year of Queen Elizabeth.

In 1721 Simon Michell converted the remains of the ancient structure into the present church (St. John's Church), which is the second of Queen Anne's churches, in order of the time of consecration.



The crypt comprises a central avenue 16 feet 3 inches in width, and 12 feet in height, with an aisle on each side, extending from east to west, and is (with the aisles) of the same extent and length as the present church above. The west end of the crypt is bricked up: it originally extended westward, which has been proved from time to time when excavating for drains, &c.

The most interesting remaining portions of the crypt comprise the central avenue and a small compartment on each side of it by the entrance at the east end. The compartment on the south side is bricked up, having been converted for many years into a "private vault."

The entrance to the crypt is at the east end by a flight of stone steps beneath a modern vestry. The crypt appears to have been originally above ground, and not subterraneous: an entrance to it may be seen in Hollar's view of the east end as it appeared in 1661 from St. John's-street, with the hospital gardens and boundary wall.

The central portion of the crypt consists of four severeys or bays: two are simple and plain, being semi-Norman, and two (towards the east) are Early English, and very perfect, the details and mouldings being worthy of a careful examination. The ribs of the Early English bays spring from triple-clustered columns 3 feet 9½ inches high in each angle of the bays, with moulded capitals and bases: an excavation has been just made, exposing the bases to view: the upper moulding is horizontally fluted similar to some Grecian Ionic bases. The central shafts of the clustered columns are pointed, and the diagonal ribs have three mouldings: the central one is pointed and the outer are rolls. This pointed bowtell occurs frequently in Semi-Norman and Early English work, and is coeval with the introduction of the pointed arch. Suspended from the keystone of each arch is an iron ring. On each side of the two western bays of the central aisle is a deeply-recessed pointed window: the opening was long and narrow, 3 feet 9 in. high, and 9 inches wide, and the inner splay is 7 feet 7 in. by 4 feet 2 in. wide: the wall is 4 feet thick. The trefoil-headed doorway, shown in the accom-

CRYPT OF ST. JOHN'S CHURCH, CLERKENWELL.

Part of North Aisle.

Trefoil-headed Doorway.

ranying illustration, is on the west side of the north compartment, and has the large iron eyes of the door-hinges still remaining.

The original pavement of the crypt is 1 foot ⅓ in. below the present level. The artificial ground appears to be clay, introduced in modern times to prevent the damp from rising.

In the south and east walls of the present church are remains of Prior Docwra's Perpendicular work, and the pews stand upon capitals, rib-mouldings, and other remains of the former church.

Beneath pew No. 82 are eight clustered capitals, with long flowing palm-leaves: these leaves were gilt upon a blue ground.

The priory enclosure-walls can still be traced, on the north, west, and south sides, and the modern dwellings in St. John's-square are mostly built upon the old rubble walls of the hospital: fragments of the ancient buildings are frequently discovered. There are still in existence, beneath the houses on the north side of the square, walls 7 feet in thickness, and containing splayed window openings. In old maps, St. John's-square is called St. John's Priory. It was the Priory-court, and enclosed by the ancient buildings.

This crypt in modern times (1762) has been rendered notorious by the detection of the imposture known as the Cock-lane Ghost.

The crypt, similar to others, has been converted into an unnatural receptacle for the dead to aid in destroying the living. There are now, however, but few coffins remaining, and there is no obstacle in the way of visitors.

ON CHURCH BELLS.

The following formed part of the paper read by the Rev. W. C. Lukis, at the meeting of the Wilts Archæological Society, already referred to. Mr. Lukis considered the subject under the following heads:—

1. Belfries; their condition, and the causes of their frequent dilapidation.
2. Bell founders and foundries.
3. The composition of bell-metal.
4. Method of casting and tuning bells.
5. Bell hanging.
6. Expenses of bells in early and present times.
7. Ancient bells.
8. Epigraphs or legends.
9. Bell-ringing.
10. Spoliation of bells temp. Reformation and subsequently.
11. Comparative scale of tenor bells.

We confine ourselves to a few of the heads.

Belfries.—Some persons apply this term to signify the whole tower: others limit its application to the part in which the bells are suspended; and others again to the room or space in which the ringers stand, which is either on the floor of the church, or in one of the stages of the tower. This is a matter of very little consequence; and I do not intend to speak of this part of the church further than just to remark by the way, that as it was clearly erected for the purpose of carrying bells, it is a matter for our grave consideration how it comes to pass that so many of our village churches should have their towers in so dilapidated a condition. I have seen several in the course of my Wiltshire rambles which are in so dangerous a state that the bells are forbidden to be rung. There can be no doubt that this arises from two causes. In the first place, bells for which the towers were generally constructed were not subjected to the same revolutions and tossings as now. They were swung to and fro, it is true, as I shall

explain presently, but very gently compared with the present wild summersets of change ringing, an art of comparatively recent date. Consequently, in constructing the towers, the architects of those days had not to take into their calculation the great vibration of the walls produced by the violent motion of the bells.

In the second place, and this I take to be the principal cause of the evil, churchwardens have been sadly negligent. With a little grease and new ropes allowed now and then, they have imagined that their duty to the bells and to the parish has been faithfully done, whereas mischief of a three-fold nature has been growing and increasing,—mischief to the building, to the bells, and to the parishioners; the one ending in its dilapidation and ruin; the second, in their utter destruction; and the third to the prejudice of their pockets. In a tower in this county I found three out of six bells broken, as I firmly believe, from this cause, and several peals of bells rendered nearly useless in consequence of the shaky state of the towers. As an instance of the way in which some, I may say many, churchwardens speak and act, I will mention, that I was warned by the parish clerk to be very careful where I stepped in the bell-loft, for, said he, "the tower be main crazy." On asking the churchwarden for the key of the church, and mentioning the clerk's humane warning, he said, "Sir, I have known the tower these forty years, and he never was no better than he is now. He's quite safe. I'll tell'ee what, sir; one day the bishop come, and he said, Muster Churchwarden, you've a very pretty church, and he's in very good order. Another day, another gentleman come, I think they call'un a rural dean, and he said, Muster Churchwarden, you've a pretty church, and he's sadly out of repair." When I returned the key I did not see the churchwarden, on I should have told him that in my humble opinion both the rural dean and the parish clerk were right; for I had seen very many churches and many belfries, but few in a worse condition.

Bells require very constant attention to keep them in proper ringing order. When you consider their enormous weight, the different parts of their harness, the iron and the wood of which it is composed, bolted and screwed together, the framework on which they hang, and in revolving which they violently shake and vibrate; and then reflect that the iron and the wood are both exposed to continual changes of atmosphere; and that, under one condition of atmosphere, when one of these materials expands, the other contracts, and that then the bells cannot oscillate so easily,—you will form some idea of the care and attention they require to keep them in ringing order. Well, suppose screws to get loose, and to remain so during many successive generations of screwing churchwardens, the iron straps to become corroded, thin, weak, and then to snap, the gudgeons to wear away unequally by the friction, and thereby to throw the bells out of the horizontal,—you can imagine what the consequences must be. The bells revolve heavily, the framework shakes and creaks, and the ringers, who have no voice in the vestry, and no power over parish moneys, do what they can to remedy some of the evil, and the very thing they do only increases the mischief. They put wedges between the framework and the walls of the tower to stop the creaking; but the result of this is to set the walls shaking, and finally to destroy them. Or if this does not immediately happen, the clappers of the bells get out of order, and, striking the sound-bow suddenly in a fresh place, cause them to crack instantly.

While upon the subject of Wiltshire bell-lofts, I cannot refrain from expressing another regret. I have been frequently much pained by observing the shameful state of filth and neglect of many of them. Generally speaking, the dark winding stone staircases (when they have any) leading to them, are dirty, worn, and difficult to tread, and you have to cork-screw your way up with very careful step, and when you have secured your footing, and you begin to congratulate yourself on having passed every obstacle, you suddenly come upon a huge heap of sticks, straw, feathers, bits of cloth, and other rubbish, the patient and laborious work of indefatigable jackdaws. When the towers have no stone staircase, the bells have to be reached by a succession of crazy ladders, planted on equally crazy floors.

How very shameful that any part of God's house should be so neglected! Why should towers be so desecrated? Are they not really as much a portion of the church as any other part? Why should they be left to the sole occupation of unclean birds, and profane and irreverent ringers! Why, the very jackdaws, starlings, and owls used to stare at me, and linger among the bells before they took flight, wondering, perhaps, what sort of evil bird I was, and with what possible object I had intruded unbidden into the territory to which generations of parishioners had given them a prescriptive right.

We come now to the second division of the subject—

Bell Founders and Foundries.—When you examine a church bell, you will generally observe, that, besides a legend, or some quaint epigraph upon them, there are also the initials or the name of the founder, and sometimes the town is added where the foundry was situated. The number of bell-founders whose bells exist in Wiltshire, amounts to between twenty and thirty. This appears a large number, but you must recollect that they range over a period of 300 years at least. I have a list of upwards of sixty founders, which I have collected chiefly from inscriptions on bells, but they are not found in Wiltshire only. I do not say that these twenty or thirty founders had their foundries in this county, but you will nevertheless be gratified to hear that Wiltshire has produced some of the most eminent men of this craft: I allude to Wallis, Danton, and the Purdues of Salisbury in the sixteenth and seventeenth centuries; to the Corrs and Wellses of Aldbourne, in the seventeenth, eighteenth, and nineteenth centuries; and in the eighteenth century, to Richard Phelps, of Whitechapel, London, a native of Avebury, who cast the great clock bell of St. Paul's Cathedral, weighing nearly four tons. It will be, I believe, a new thing to the people of Salisbury to hear that a very large bell-foundry existed here for a considerable period. I have ascertained that it continued to supply Wiltshire and other counties with bells for a period ranging from 1581 to 1731, and yet it is a very remarkable circumstance that no tradition of its existence has been perpetuated in the city. I have searched in vain through published histories of Salisbury, and have been equally unsuccessful in my inquiries here among those gentlemen who have made its antiquities and history their study. Not one vestige remains of the foundry, nor a single record of its site has yet come under my notice. I have, however, been informed that the street called Culver-street, was also called Bellfounders-street, and it is just possible that it stood there. That the foundry must have been large and its business extensive, is evident from the very large proportion of bells in Wiltshire that came from it; and also from the fact that the heaviest bells in the county were cast there. It could not have been an insignificant foundry that produced such bells as the tenor of St. Edmund's church, and the tenor of Great Bedwyn. The earliest founder in Wilts with whom I am acquainted, was J. Wallis, of Salisbury, and his first bells are to be found at Little Bedwyn, Bishopstone, Figheldean, Netheravon, St. Martin's, Salisbury, &c. There appears to have been an extraordinary demand for his bells; and he seems to have been a man of few words, but of great deeds.

With the deaths of the Purdues end the really great works of this foundry. They had successors, but the giants of the art were no more, and with Clement and William Tosier closes the history of the Salisbury foundry about the year 1731. Their bells are to be found in the immediate neighbourhood, at Nunton, Homington, Winterbourne, Dantsey, Shrewton, Orcheston St. Mary, &c. but they are all of small dimensions.

The Corrs of Aldbourne were founders of church bells as early as 1696, and although this foundry must have supplied a vast number of bells in their days, as well as in the days of their successors, the Wellses, I cannot discover that any very great work issued from their hands, compared with that of their brethren of the craft at Salisbury.

The Composition of Bell-Metal.—In the Liberate Roll, 26 Hen. III. sec. 12, is an entry of 1,050 lbs. of copper and 500 lbs. of tin, and the metal of an old bell, to be melted up with it to make three new bells for the church of the castle of Dover. In the circle of mechanical arts published by Mr. Martin, a civil engineer in 1813 (354), it is stated that in bell-metal there is about one-fifth of tin. And in the "Penny Cyclop." tit. "Bronze," it is stated that Dr. Thomson found English bell-metal to consist of—

Copper	80
Tin	19·1
Zinc	5·6
Lead	4·3
	100

Bell-metal, therefore, consists principally of copper and tin, in certain proportions, but each bell-founder has his secret mode of amalgamating his metals. I believe that the best bell-metal is compounded of four parts of copper to one of tin. It is quite an error to suppose that silver enters largely into the composition of some bells. When the bells of my own church were taken down the other day for the purpose of re-stocking them, it was observed that the canons had become white in parts where there had been some friction, and I could not convince the workmen that it was tin and not silver which they saw. They knew better; and only wished they could have the bells to extract the precious metal which they contained. It has been stated by those who know much more about this matter than I do, that "silver, if introduced in any large quantity, would injure the sound, being in its nature more like lead, as compared with copper, and therefore incapable of producing the hard, brittle, dense, and vibratory amalgam called bell-metal."—("The Bell," by A. Gatty, p. 30).

It is very certain that ancient bells have a better and more mellow tone than the generality of modern ones. The tenor bell of Ogbourne St. Andrew, which was cast in the fifteenth century, and weighs about 15 cwt. cannot be surpassed for richness and dignity of tone. This superiority is owing, no doubt, to several causes—first, to a larger weight of metal than is commonly given now to a bell of the same note; secondly, to a better admixture of the metals; and, thirdly, probably to the method then adopted of fusing the metals, viz. by a wood fire, which not being so hot as that of coal, does not reduce the inferior parts to a state of fusion, but they are thrown away as scoria or dross. *See* "Ecclesiologist."

Method of Casting and of Tuning Bells.—The art of bell-founding and tuning was brought to great perfection by Abraham Rudhall, of Gloucester, whose foundry has passed into the hands of the Messrs. Mears. When the size and proportions of the bell to be cast have been determined, four things have to be prepared,—first, the crook; second, the inner mould or core; third, the outer mould or cope; and, fourth, the crown.

The crook is a kind of compass formed of wood, and is used for making the moulds. One leg of this instrument is curved to the shape of the inner side of the intended bell, and the other takes the shape of the outer side; and they are made to revolve round a pivot fixed to a beam above, and the lower end driven firmly into the ground. The inner mould, or *core*, is built up of brickwork round this pivot, having a hollow space in the centre for a fire; and the face of the brickwork is then covered with a composition of clay and other materials, and moulded by one of the legs of the crook into the shape of the inside of the bell. It is then baked, by means of a fire in the hollow, and, when hard, is greased and coated with another composition, which is made to take the exact shape of the outside of the bell, by a few revolutions of the other leg of the crook. This is also hardened by the fire, and upon it are placed the inscriptions and ornaments in relief. Over this, when it has been washed with a composition of grease and tan, the outer mould, or *cope*, is formed; and, finally, the *crown* or head of the bell, for the formation of the canons, is then fitted to the top of it. The whole having been burnt, the cope is re-

moved, and the inner thickness of composition representing the bell destroyed, so that when the cope is again put over the core, there is a space between the two of the shape and thickness of the bell, and into this space the metal is allowed to run.

When the bell is to be cast, the core is placed in a pit close to the furnace, the cope and crown are carefully fixed over the core, and the whole is rammed round tightly with dry sand, leaving nothing exposed but the holes in the cap or crown, for an air-hole, and the other for the fused metal to run into.

As soon as the metal is cool, the bell is dug out, and, if one of a peal, carried into the finishing department for the purpose of being tuned. Formerly this was done by chipping the inside of the bell, or by cutting away the edge of the lip. But Mr. Rudhall, of Gloucester, invented a simple machine for accomplishing this object. It is nothing more than a vertical lathe driven by steam power. The bell to be tuned is fixed very firmly in an inverted position, and a powerful cutter, working on a pivot placed within it, diminishes its thickness if too sharp, or, by cutting away the edge of the lip, reduces its diameter, if too flat. It must have been a very difficult operation for Mr. Lawson Huddlestone, by the process of chipping, to modulate the sound of every bell in a peal till they answered exactly the intervals of the monochord, and more particularly in those cases where the bells had been cast at different periods by different founders, and with different metal. But it appears that this gentleman, who had a passion for bells, used to pass days and weeks in belfries in this laborious work, and thus tuned the peals of Colerne, Shaftesbury, Knoyle, and St. Cuthbert's, Wells.

Bell-hanging.—When a bell is ready, the next operation is to hang it in the church tower; and here in England one or two great changes have been introduced in the mode of doing this. It is, perhaps, one of the most difficult of all the operations connected with bell-fixing, and requires the greatest care and skill of the person employed. I must here begin by saying that a great deal of the mischief to which I have alluded in speaking of belfries, arises from the unscientific manner in which bells are too often hung now. It is too frequently the practice for parishioners or churchwardens, when the bells require it, to send for the village carpenter, who knows about as much of bell-hanging as he does of geology, in the comfortable but vain notion of saving parish money. Bell-hanging is an art of itself, quite distinct from that of bell-founding, and like it has secrets of the trade. It is of the utmost consequence that the stock, or piece of wood to which the crown of the bell is fixed, should bear a due proportion to the size of the bell, and the length of the staple from which the clapper hangs. If this is not attended to, the clapper will not strike the bell properly. This is determined on sound principles of dynamics. But what can a village carpenter, who never fixed church bells before, know of that science! And what must be the result of his unskilful efforts!

Before the introduction of change ringing, it was not of so much consequence how the stock was made, because bells were then only chimed. But as soon as they began to be swung rapidly to and fro on their gudgeons, and rung in time, it became necessary to reduce the proportions of the various parts of their harness to fixed rules and principles, which can only be known by those whose business it is to make them their study. Among others who can be recommended for their intelligence and skill in this department, may be mentioned Mr. H. Boswell, of Pembroke-street, Oxford, and Mr. James Ansell, of London.

One important part of bell harness remains to be noticed, viz., the wheel. This is, in fact, the powerful lever, by means of which the bell is moved; and it has undergone some changes. It is not probable that the full wheel was employed much before the year 1677. Before that period bells were moved by means of a short piece of wood fixed at right angles to the stock, or by a half-wheel, which was in use in 1527, and is still to be met with in Dorsetshire, at Dunchideock, Devon, and in Guernsey. The half-wheel was all that was required for chiming, but it could not answer the purposes of change-ringing, in which it is necessary that the bell should be *set*, *i. e.* turned up, and rested against the slider or catch, each way. For explanation of this operation, see the *Builder*. Several changes also have taken place in the mode of attaching the clapper, which I will only allude to now. There are models upon the table explanatory of three of these modes, one being the ancient and another the modern method. An excellent article upon the subject, by Mr. Ellacombe, has recently appeared.

Expenses of Bells, &c.—There are many entries to be found in parish account books which throw considerable light upon the history of bells and bell-founders; and among other things, the value of bell-metal, old and new, with the cost of casting bells, per cwt. is accurately given, *e. g.* from the churchwardens' accounts of St. Margaret's, Westminster, we find that in the year 1592, bell-metal was worth 56s. the cwt. From that of Steeple Ashton, in this county, we learn, that in 1616, it was worth 5*l.* 12s. In 1630, the accounts of St. Thomas's Church, in this city, tell us that it maintained the same value, and that the cost of casting was 14s. the cwt. In 1663, we find from the same accounts that the value had risen to 6*l.* 6s. and that old bell-metal fetched 4*l.* 5s. In 1716, the vestry of the same church agreed with Mr. Abraham Rudhall, of Gloucester, that he should have 7*l.* for casting the second bell, and 1s. per lb. for any additional metal. In 1769, the parish of St. Mary, Marlborough, agreed to give Mr. Robert Wells, of Aldbourne, 6*l.* 10s. per cwt. for a new third bell, and were to receive 4*l.* 13s. per cwt. for the old metal. And now the price varies from 6*l.* 10s. to 6*l.* 15s.; but if frames, carriage, hanging, journey, &c. are included, the cost is about 7*l.* per cwt. and old metal realises about 4*l.* 4s.

Ancient Bells.—In the Archdeaconry of Wilts there are 107 churches, of which I have examined the bells of 59, with an aggregate of 288 bells, and of this number only 11 are clearly of a date prior to 1500, 8 are of the sixteenth century, and 130 belong to the seventeenth century. Out of 448 bells in this county, 26 belong to a period prior to 1500, 18 to the sixteenth, 193 to the seventeenth, 131 to the eighteenth, 59 to the nineteenth century, and 21 have no date or inscription. And this rarity of bells of the fifteenth century is not confined to Wiltshire only; although the proportion of bells of that date in other counties may be greater; *e. g.* in the Framland hundred, county Leicester, which contains 38 churches and 127 bells, there are as many as 23 of an ante-reformation period ("Ecclesiologist, vol. iv."). The cause of this rarity throughout England I will explain presently.

Epigraphs or Legends.—When speaking of bell-founders, I have mentioned some of their characteristic epigraphs. There are some other curious ones, which I shall here introduce. At Aldbourne, on the first bell, we read, "The gift of Jos. Pizzie and Wm. Gwynn,

> Music and ringing we like so well
> And for that reason we gave this bell."

On the fourth bell is,—

> "Humphry Symsin gave xx pound to buy this bell,
> And the parish gave xx more to make this ring go well."

A not uncommon epigraph is,—

> "Come when I call
> To serve God all."

At Chilton Foliott, on the tenor, is,—

> "Into the Church the living I call,
> And to the grave I summon all.
> Attend the instruction which I give,
> That so you may for ever live."

At Devizes, St. Mary, on the first bell, is,—

> "I am the first, altho' but small,
> I will be heard above you all."

And on the second bell is,—

> "I am the second in this ring
> Therefore next to thee I will sing."

Which, at Broadchalk, is thus varied:—

> "I in this place am second bell
> I'll surely do my part as well."

On the third bell at Colne is,—

> "Robert Forman collected the money for casting this bell
> Of well disposed people, as I do you tell."

At Bath Abbey, on the tenth bell, is,—

> "All you of Bath that hear me sound
> Thank Lady Hopton's hundred pound."

On the fifth bell at Amesbury is,—

> "Be strong in faith, praise God well,
> Frances Countess Hertford's bell."

And, on the tenor,—

> "Altho' it be unto my loss,
> I hope you will consider my cost."

At Stowe, Northamptonshire, and at St. Mary the Virgin, Oxford, we find,—

> "Be it known to all that doth me see
> That Newcombe, of Leicester, made me."

At St. Michael's, Coventry, on the fourth bell, is,—

> "I ring at six to let men know
> When to and from their work to go."

On the seventh bell is,—

> "I ring to Sermon with a lusty bome,
> That all may come and none can stay at home."

On the eighth bell is,—

> "I am and have been called the common bell
> To ring, when fire breaks out to tell."

At St. Peter's-le-Bailey, Oxford, four bells were sold towards finishing the tower, and in 1792, a large bell was put up, with this inscription:—

> "With seven more I hope soon to be
> For ages joined in harmony."

But this very reasonable wish has not yet been realised; whereas at St. Lawrence's, Reading, when two bells were added to form a peal of ten, on the second we find,—

> "By adding two our notes we'll raise,
> And sound the good subscribers' praise."

THE BRITISH ASSOCIATION AT LIVERPOOL.

The members of the British Association have had a brilliant session in the newly-inaugurated St. George's Hall, the southern wing of which was reserved for their use. The opening address by the Earl of Harrowby was delivered in the Philharmonic Hall, and was largely attended. A preliminary meeting, however, of the general committee, had previously taken place, at which routine matters were transacted, Mr. William Hopkins, the president of last year, in the chair. At this meeting the council's report was read. The chief points in this report related to Lieut. Maury's navigation scheme, to promote which a department of the Board of Trade had been established; to the pension-list so far as regards men of science, who, according to Lord Aberdeen, are only entitled to come in "below the salt," and as little better than paupers; to an attempt to improve the position of science and its cultivators in this country by Government or Parliamentary measures, as to which no report had as yet been made; and to the concentration of the scientific societies in some central metropolitan locality, as to which Sir W. Molesworth had intimated that the societies at Somerset House had peculiar claims, and would have a preference in the allocation of the site.

The address, by the Earl of Harrowby, was as full of details as to the progress of science, as if it had been delivered by one of our more strictly professional *savans*. This his lordship candidly attributed to memoranda by some of these *sacans*, incorporated with his own excellent discourse; and thus, perhaps, even a better, and at least a more general review of different branches of science was given than if the address had been limited to the personal experience of any one man of science. This departure from established practice has too much real merit and convenience not to be hereafter drawn into a precedent, even by men of science themselves, in giving a comprehensive review of the progress of science. Of the importance of his general subject, his lordship manifested a warm appreciation. In regard to the association of Liverpool and its commerce with science, he said:—

"It cannot be for nothing that the heroes of every branch of science are assembled from many countries within these walls, and are brought into personal contact with the most enterprising and public spirited of our merchants; that, in the language of my distinguished predecessor in this chair, slightly adapted,

'the counting-house is thus brought into juxta-position with the laboratory and the study.' Commerce will more than ever be auxiliary to science—and science more than ever the helpmate of commerce—and a still further impulse will be given to those beneficial influences, which, in spite of some painful though necessary interruption, occasioned by our present state of war, a good Providence is so visibly extending over the whole habitable globe. * * * There is no town which owes more to science than does Liverpool. Without science can her vessels stir without danger out of sight of land, or walk the waters independent of wind or tide? Without science would they have docks to shelter them, railroads to bring their produce to the docks, telegraphs to announce their movements, manufactures to freight them to distant lands? I do not believe that Liverpool is insensible to her obligations. This magnificent reception is one evidence of the feeling; but a still better is to be found in her liberal support to such institutions as the public libraries and museums, as her Collegiate Institution and her Mechanics' Institute, and, above all, to her magnificent observatory."

The Earl of Derby next addressed the meeting. His lordship modestly admitted himself to be a little out of his element there as a speaker, and having heard by chance probably of those "queer fishes" of the "pre-historic period" occasionally found "out of the water," expressed himself as belonging to "that earlier period"—the "pre-scientific" era—as his friend the Earl of Harrowby hinted—which excluded him from such society as that in which, very much to his own surprise, it appeared, he found himself holding forth. But, for all that, his lordship made a very graceful and appropriate speech.

Sir C. Lyell followed. Professor Phillips read the programme of the first day's proceedings, and the business of the session in the sections began on the following day.

THE LATE MR. GEORGE FIELD.

Mr. George Field, the author of "Chromatics, Chromatography, and Outlines of Analogical Philosophy," died last Thursday, the 28th ult. in his own little museum of literature, art, and science. The public will be glad to hear something of a man who has done so much for the improvement of our artists, and the extension of a pure taste for the beauties of nature.

Mr. Field was born at Berkhampstead, in the year 1777, of a respectable family, located in that township for ages, for we learn from Clutterbuck's "History of Hertfordshire," that one of his ancestors, George Feilde, was in 1546 educated at the same school of St. Peter's, Berkhampstead, where our own George Field received, two centuries and a half later, under Dr. Dupre, the education that led to such happy results.

At about eighteen years of age, rather than continue an incumbrance on his widowed mother, he resolved to come to London, and having no defined prospect, to look about him, and contrive a profession for himself, based on his acquirements, his industry, and independent feelings. He thought he saw an opening in the careful application of chemistry to pigments and dyes, and he made the attempt. Our war with the Continent, by stopping our supply of madder from Holland, threatened to impede his progress.

This, however, led him to consider the nature of its cultivation; and with a well-devised project, he waited on Sir Joseph Banks for his advice, and, he hoped, his co-operation, so as to carry it out on a scale commensurate with the wants of the nation. In this he was disappointed: Sir Joseph had already made an unsuccessful attempt at the cultivation of madder in Essex, and determined that it was not to be done in England. Thus reduced to his own humble resources and requirement, Mr. Field commenced the cultivation in his own garden, and from roots of his own growth, produced specimens of the colouring matter incomparably more beautiful than any before seen. This was a prosperous step at the right moment. So far, cultivation and chemistry had served him well; but an ingenious contrivance, both mechanical and chemical, was still wanted to reduce the liquor to its finest consistence. His invention of the percolator by atmospheric pressure admirably accomplished this purpose. With that liberality which always impelled him to dispense knowledge and truth to all mankind, he made this discovery known to the Society of Arts, Sciences, and Manufactures. That society awarded him their medal for the communication; but, strange to say, the invention was patented by others several years after, and applied to the clearing of sugar: in the West Indies it realised a large fortune, before the real history of the invention was known, or a more economical method was adopted.

Whilst others were largely benefiting by his discovery, Mr. Field continued his humble but useful application of science to the purposes of the artist with good effect: his dexterity and care in the preparation of delicate colours set all competition at defiance, and the charm of his writings enticed artists into the wholesome considerations of science, and a higher appreciation of nature and of the dignity of their profession.

Among the discoveries he made by way of instructing us in the theory of light and colour, we must particularly notice his metrochrome and his conical lenses, which produced a continuous rainbow, with varied effects of refractions.

Mr. Field's knowledge was not restricted to subjects in relation to optics, chemistry, and the fine arts: his outlines of analogical philosophy contain a large amount of information on many branches of human knowledge. During the last two years of his life, his physical sufferings were great, but they were mitigated by his own resignation, sweet temper, and high principle.

SUFFOLK INSTITUTE OF ARCHÆOLOGY AND NATURAL HISTORY.

A general meeting of the members of this association has been just concluded at Ipswich, which has been visited by a considerable number of the antiquaries of Norfolk and Suffolk. The proceedings commenced with an exhibition of antiquities in the council-chamber, the chief contributors being the corporation of Ipswich. The collection comprised several objects of archæological interest.

The president of the institute (the Rev. Lord Arthur Hervey) occupied the chair at the meeting held after the inspection of the antiquities, and, after some congratulatory remarks, his lordship read a letter received from Major Bunbury, detailing some interesting researches made in Bulgaria by the gallant writer. Major Bunbury stated that the objects which had most excited his attention at the camp at Aladyn were some large rough columns, varying in size and much honeycombed by time. He had not been able to trace any inscriptions upon them, though they were from 9 to 10 feet in diameter, and from 12 to 15 feet in height. They appeared to be more like Druidical than Greek remains; and in the absence of any positive information respecting them, Major Bunbury had come to the conclusion that they were sepulchral monuments.

Papers were read by various members. The first was by Mr. W. S. Fitch, upon the ancient Corpus Christi guild of Ipswich, including extracts from MS. by Nicholas Bacon, kept in the muniment room of the Ipswich corporation, beginning with the 23rd Henry VI. and ending with the 23rd Charles I. A second paper, from the same gentleman, contained extracts from the household book of Sir John Howard, afterwards John, Duke of Norfolk (killed at Bosworth Field), purporting to be the "election expenses" of himself and Sir Thomas Brewse, of Little Wenham Hall, in the election of members of Parliament for Suffolk, in the 7th Edward IV. A third paper, by Mr. Phipson, treated of the celebrated "Sparrowe's House," in the butter market.

Excursions of inspection were made to Sparrowe's House, and from thence to Little Wenham Hall, Wrexham, Washbrooke, and Capel churches. At Washbrooke, the party was joined by Sir F. Kelly, M.P. and several other country gentlemen. Papers were read on Little Wenham Hall, by Mr. Jackson, and on Capel church, by Mr. Tymms; and the pleasures of the day were much enhanced by the extreme fineness of the weather.

INDUSTRIAL COURTS IN THE CRYSTAL PALACE.

On the other side we have sketched three of the industrial courts in the southern half of the Crystal Palace, at Sydenham, namely, the Court for Musical Instruments, and the Printed Fabrics Court, both on the east side, and the Sheffield Court on the west side. Of the two former we give an exterior view from the nave, and of the latter an interior view.

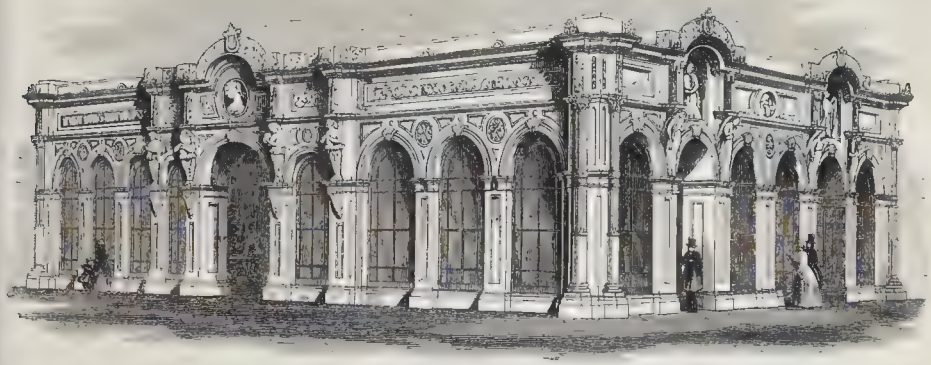
The *Musical Court* is remarkable for the large amount of modelling with which Mr. John Thomas, by whom it was designed, has ornamented it. The elevation facing the nave is designed to set forth pastoral and primitive music. The entrance is surmounted by a bust of Apollo, and we have heads of Pan, pipes, shells, and appropriate foliage. The return-front is made to symbolise sacred music: figures of Miriam and David, angels with trumpets, and a bust of Jubal, with suitable inscriptions, bear out the intention.

Over the side entrances, within, and facing each other, are figures in alto-relievo of St. Cecilia and Erato, with quotations from Dryden and Collins. Over each arched recess is a bust of some eminent composer, and between each of these project fanciful columns, on which stand boys playing on different instruments. Panels in the frieze between the children contain bas-reliefs of musical instruments and foliage.

The *Sheffield Court* was designed by Mr. G. H. Stokes, the son-in-law of Sir Joseph Paxton, and to whom, we believe, all the architectural details of the main building and terraces were entrusted. The principal feature of this court is a double arcade of Moresque columns and arches on the top of the enclosure walls, above which an ornamental pent-house is carried by perforated brackets of large projection. Iron and glass is largely used in the construction, and the whole is characterised by appropriateness.

Messrs. Banks and Barry designed the *Court for Printed Fabrics*, and have shown their skill in decoration. It is designed in a free style, adapted from the Italian; and has large glazed openings for the display of goods.

We may mention that a picture gallery is being formed in the north wing of the Crystal Palace. The collection appears to be mainly confined at present to a number of paintings from Belgium, but will doubtless speedily be increased.

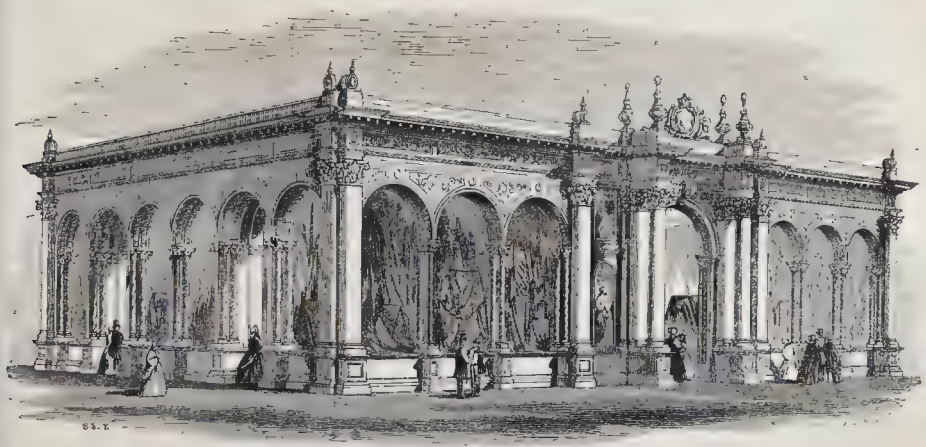


THE YOUNG MEN'S CHRISTIAN ASSOCIATION.

The committee of this excellent association have fitted up the building long used as the City of London Literary Institution, in Aldersgate-street, for similar purposes, and they trust that under the principles of management adopted at their library and reading-rooms in Gresham-street, it may increasingly serve the comfort, convenience, and solid improvement of the numerous class of young men who are engaged in the great commercial establishments in the vicinity. We may hope, too, that the members of many families resident in the neighbourhood will avail themselves of its advantages, and that the institution may thus exercise a large and beneficial influence.

Under the direction of Mr. Maberly, architect, works to a considerable extent have been done by Messrs. Haward and Nixon. The reading-room, where coffee, too, will be served, has been handsomely decorated, and here a few days ago a large party of influential persons, presided over by the Hon. Arthur Kinnaird, met to inaugurate the establishment, and some excellent speeches were made. The institution offers great advantages at small cost, and is entitled to strenuous support.

The Burning of Boulogne Theatre.—During the visit of the Emperor of the French to Boulogne week before last, the theatre there was destroyed by fire, originating, it appears, in the end of a lighted cigar having been carelessly thrown down in the costume-room, when it set fire to some of the dresses. Here is just another instance in which the saturation of all such properties in a silicate such as we long since recommended, would have saved the whole theatre. It is also said, that had there not been a misunderstanding between the English Water Company and the Corporation, for which the latter are blamed, the fire might have been extinguished in five minutes. The Emperor, on hearing of the accident in passing, left his carriage, and superintended the operations in person.



INDUSTRIAL COURTS, CRYSTAL PALACE.

The Sheffield Court.

The Printed Fabrics Court.

PROVINCIAL NEWS.

Wisbech.—The demolition of houses from the bridge to the King's Head for approaches to the new bridge is in progress, and the eastern side of Cornhill, where lately stood a row of houses, tenanted by tradesmen, is now an open space, covered with *debris*.

Bedford.—A new hall for lectures, exhibitions, &c. is about to be erected here by shares.

Oxford.—The industrial schools in course of erection in this city are nearly completed. They were lately visited by the Vice-Chancellor, as an *ex officio* guardian under the new Act. The building has also been visited and approved by the Government inspector. Mr. Bruton is the architect.

Worcester.—The committee appointed at last quarter sessions of the county of Worcester to return the names of three eligible gentlemen for the office of county surveyor have, after investigating the testimonials of twenty-two gentlemen, unanimously agreed to recommend Mr. Henry of Worcester, Mr. Alexander Milne of Northampton, and Mr. Henry Rowe, jun. of Worcester.

Gloucester.—The arrangements for water supply from the Severn are nearly completed, and the pumping was to commence in the early part of this week. It is estimated that the pump will raise 300,000 gallons of water to the reservoirs at Robin's Wood Hill every twenty-four hours.

Ludlow.—The new Cattle-market committee have decided on plans. Mr. Cranstoun, the architect, having furnished the council with two plans for the new market, and also an estimate of the expense of making the same under each, the committee, after some discussion, unanimously resolved that plan No. 1 should be adopted, and the town clerk was instructed to take the necessary steps towards obtaining an amendment of the present Act.

Burslem.—Messrs. Lee and Stevenson, the engineers to whom the drainage of Burslem has been entrusted, are now preparing contractors' quantities, &c. and it is hoped that the local board of health will shortly be able to advertize for tenders, and early in spring proceed with the works. The system to be carried out is a medium between the small pipe and large drain, comprising both, and adapting them to the peculiarities of the district.——The new town-hall works, under the superintendence of the town surveyor, are now up to the first floor; although the progress of the works has not been so rapid as was anticipated. The covered market has been entirely cleansed, the interior whitewashed, and the interior and exterior re-painted. These, with extensive repairs to the roofs, and re-stalling, have placed the market in a good state of repair.

Wednesbury.—A public meeting of the inhabitants of Wednesbury and the vicinity was held at the Town-hall, on Wednesday in week before last, to consider the means of providing an efficient supply of water to that district, under an Act obtained in 1853, which gave powers for the supply of water to Lichfield, Walsall, Wednesbury, Bilston, Darlaston, Willenhall, Sedgley, Tipton, West Bromwich, Rowley Regis, Dudley, and Oldbury. A report of Mr. Henry Marten, C.E. was read, stating that he had made accurate gaugings of the Lichfield streams, and that, notwithstanding the long drought, the Pone's Mill stream continued to yield over 2,000,000 gallons a day. The Seedy Mill stream at present yielded 1,250,000 gallons a day, but would in the winter months and in wet weather pass a much larger volume of water than the Pone's Mill stream. The whole of this water could be conducted, without any expense of pumping, to the works at Lichfield. The area from which this body of water was obtainable was nearly three times the extent of that supplying the large reservoir of the Birmingham Canal Company at Cannock Chase. With properly-constructed storage reservoirs, a quantity of eight to ten million gallons a day might be depended on, if necessary, from these two sources. A local committee was formed to aid in carrying out the objects of the company in the Wednesbury district. It was stated that the company could either supply each house, or a local company in bulk, and that a 10*l.* house could be charged 7s. 6d. per annum. The company's maximum rate was 7½ per cent. or 15s. a year on a house not exceeding a 10*l.* yearly rental. A large number of shares was at once subscribed for.

King's Norton.—On Wednesday week the remains of the large chimney belonging to Lifford Chemical Works, near this village, erected by the late Mr. Pratt, fell down with great force upon a portion of the roof of a large piece of building on the premises used by Mr. Phipps (who is working the clay mine) as a drying-house for his bricks. The stack, which was almost the last remains of the once extensive works, was recently, with other portions of the dilapidated buildings, purchased by Mr. Phipps, who, having partially undermined the same, had invited friends to witness the destruction; but owing to the excavation having gone too far, the stack gave way before the time appointed. The chimney was commenced in 1837, and when completed was the loftiest stack in the locality of Birmingham. About 50 feet of the top was blown down on January 6th, 1839, since which time it has remained imperfect, owing to the works not having been occupied.

Liverpool.—The delays occasioned by the opening of the bridges for vessels to pass out of the St. George's Dock, have led to a suggestion that tunnels might be constructed beneath the bridges, the cost being met by time saved and increase of public convenience.

Bradford.—A new school building has been opened in the neighbourhood of Spinkwell. It has been built chiefly by the Congregationalists, and has cost about 700*l.* It is in the old English style of architecture, and is capable of seating between 300 and 400 people. Its present use will be a Sabbath school and preaching room, but, eventually, it is expected that a day school will be opened in it.

Dewsbury.—National schools have been commenced for the district of Westtown Dewsbury, in Yorkshire, in the midst of a poor population. The site is a narrow slip of ground, with the upper end towards one high road, and the lower end towards another, with a fall of 26 feet in a length of 150 feet from one road to the other; on which account the buildings are detached, and placed lengthwise across the ground; the boys' and girls' school, with class-room, being at the lower end, and the infants' school and master's house near the upper end. The architect is Mr. E. W. Tarn, of London: the mason's work is taken by Mr. J. Brook, of Dewsbury, for 555*l.*; and the carpenter's and joiner's work by Mr. J. Moseley, of Huddersfield, for 280*l.* The other works are taken by parties in the town, making a total cost of 1,070*l.* a portion of which will be defrayed by Government grant. The large school has an open timber roof, with curved ribs, the style being Perpendicular Gothic, to accord with that of the adjoining church. The whole will be built of a hard sandstone from the immediate neighbourhood. The accommodation will be for 250 boys and girls, and 70 infants, with a six-roomed house for the master.

Grantham.—The public baths here, erected from the designs and under the superintendence of Mr. Thomas Oliver, jun. of Sunderland, architect, have been formally opened by the town council of the borough. During the first four days 500 persons availed themselves of the baths. It is already proposed to increase the accommodation, a plan of which has been prepared by the architect.

South Shields.—The South Shields Baths and Washhouses were formally opened on Wednesday week by the mayor and corporation. They have been erected on a plan by Mr. Thomas Oliver, jun. of Sunderland, architect; the masonry, &c. having been executed by Mr. Richard Cail, and the plumbing and engineering work by Mr. Henry Watson, both of Newcastle-upon-Tyne. ——The Town-hall, markets, &c. according to the *Gateshead Observer*, will next engage the attention of the South Shields corporation, and we have no doubt, it adds, that it will not be long before it can boast, in the centre of its noble market-place, of a building worthy of the borough, and fit for all municipal and public purposes, without addition to the local burthens of the ratepayers.

North Shields.—The working plant of the North Shields gasworks has been sold by auction.——Since the North Shields Baths and Washhouses have been in operation, their success, according to the local *Gazette*, has been highly satisfactory. From an estimate of receipts and expenditure for five weeks from 5th August, the day on which they were opened, the following result has been obtained:—Income: baths, 39*l.* 6s. 10d.; washhouse, 8*l.* 10s. 3d.; total, 47*l.* 17s. 1d. Expenditure: wages—superintendent, 7*l.* 10s.; fireman, 3*l.* 15s.; assistant, 12s. 6d.; total for wages, 11*l.* 17s. 6d. Coals, 7*l.* 1s.; water, 200,000 gallons, at 9d. per 1,000 gallons, 7*l.* 10s.; gas, 5,100 cubic feet, at 4s. per 1,000, 1*l.*; towels, 318 doz. at 1d. 1*l.* 6s. 6d.; books, 2*l.* 16s. 6d.; interest, five weeks on 2,700*l.* at 4 per cent. 10*l.* 7s. 8d.; rent (the site of the building being leased from his grace the Duke of Northumberland for sixty years at 10*l.* per annum), say 1*l.*; making a total expenditure of 42*l.* 19s. 2d. and leaving a balance of 4*l.* 17s. 11d. in hand to meet accidental expenses, alterations, wear of machinery, &c.

PROCEEDINGS FOR DILAPIDATIONS.

Twentyman v. *Hodson.*—This was an action brought in the Bloomsbury County Court, before Mr. D. D. Heath and a jury, by the plaintiff, a gentleman residing at St. John's-wood Park, to recover of the defendant, a well-known bookseller, the sum of 37*l.* 16s. for amount of dilapidations not repaired, agreeably to a specification sent in by Messrs. Lockwood, surveyors. It appeared in evidence that Mr. Hodson had been tenant of a house in the Avenue-road, St. John's-wood, on a repairing lease, at 180*l.* per annum, determinable at the first seven or fourteen years. After residing there eleven years, he underlet to a Mrs. Foster, who now occupies the premises. During his tenancy he had erected some greenhouses and other improvements. On the approaching expiration of the fourteen years he was served with notice to repair, and one specification was sent in by plaintiff's surveyors, who, in reply as to what it would cost, said about 113*l.* As the covenants of the lease regarding repairs had been strictly complied with, he thought this too much, and elected to do them himself. Mr. Hodson then applied to Mr. Indermaur, his attorney, who requested Mr. Friend, a surveyor, to get the house thoroughly repaired, and not to spare expense, but to do everything that possibly could be required. Mr. Lockwood was called, who stated he had gone over the premises in company with Mr. Parker, surveyor, and that they were left in an unfinished state. He apprised the defendant, and proposed a resurvey, and to leave it to any disinterested person. He found the roof was bad, the walls of the hall and staircases were papered, instead of painted; and in repairing the marble paper and revarnishing, bad varnish had been used. The greenhouse walls, flues, and chimneys wanted repairing. The drains and cesspools were left defective. All these several works had to be done. The grates in the house had been blackleaded, which ought to have been kept bright. The finger-plates on the drawing-room doors were originally white and gold china, and now they were replaced by black ones. Several other things were left unfinished; the knobs to the windows and knobs of dresser-drawers: the seat of a closet was also left unpolished. Mr. Parker said he went over the house, and his estimate of what had been done was 28*l.*

For the defendant, Mr. Simpson, a builder, stated that Mr. Friend had given him general instructions to repair the house, which he had done. The drains had been thoroughly cleansed, but Mr. Lockwood, in doing his work, had turned the current, which was an alteration of the original. He left the house, including the roof and interior, in the most perfect order. Mr. Alfred Friend, surveyor, said he had given orders to the last witness to do what was necessary. He had since surveyed the premises, and they were fit for any gentleman to inhabit. Mr. Abrahams, surveyor to the Duke of Norfolk, said he had surveyed the house, and it was in the most perfect repair, according to the covenants of the lease. The closets and drains were in good action, and the roof was in excel-

lent order. He made the suggestion that the blocks of marble paper in the hall should be repaired. The hall papering is not a dilapidation. There are several opinions on that subject, but he would not advise contention in such a matter. He considered a tenant for fourteen years had a right to use his discretion in putting up paper instead of painting during his tenantry; and he considered the papering a hall in this manner an improvement upon paint.

Plaintiff's counsel replied, and dwelt upon the defendant paying 5*l.* into court as a proof that he had not done all that was required.

The judge, in summing up, explained to the jury what was meant by fair "wear and tear," and said that some portion of this claim was for what would be included under that head. The defendant's witnesses had proved the roof to be in good order. The course of the drains had been altered by Mr. Lockwood after they had been repaired, as proved by Mr. Abrahams and Mr. Friend. About the hall and staircase there is no evidence before me, he continued, that it was painted originally, and that other ornamental furnitures were white and gold that are now said to be black. I take Mr. Abraham's view of the matter as a very reasonable one, that defendant was justified in papering the hall instead of painting it, and also that blackleading the stoves is not an injury to come under the name of dilapidations. In respect to the greenhouse, it was built by the defendant; but the question was, whether he had a right to take it all away. He certainly had a right to take the greater part away, but he chose to take a small sum of money, instead of having litigation; and I think it would be unjust, as it was sold, to call upon him to repair the walls.

The jury immediately gave a verdict for the defendant, on the ground that he had done all that he was required to do.

BUILDING INTELLIGENCE FROM IRELAND.

The committee for the amalgamation of the gaols of the city and county of Waterford have determined upon an increased accommodation, with a view to the better arrangement of the different classes of prisoners, which it seems has been hitherto very deficient. Plans are being received from different parties, for the conversion of the present buildings into one common gaol, for the clasification of debtors, convicts, contempt prisoners, vagrants, &c. and will comprehend generally the following accommodation, viz. fourteen yards, with day-rooms attached; 300 cells for prisoners; twenty separate cells; chapel, to contain 200; governor's apartments; two hospitals, for twenty patients each; workshops, laundry, &c. The county prison, as at present existing, occupies a space of 1a. 2r. 1p. and that of the city, 3r. 20p. which, with other available ground, gives a total of 3a. 1r. 29p. for the intended space.

Our correspondent informs us, that the present structures are of such a nature as to prevent the carrying out of an effective system of discipline, and we are induced to hope that the plans (for which a premium of 50*l.* has now been offered), may serve to overcome all difficulties. The report of the committee condemns the system now pursued, the sewerage, and the general accommodation, as insufficient.

The first stone of a new cathedral at Ballaghadereen, has been laid. The site is on the highest ground, near the town. A lofty tower, projecting 16 feet (with deeply-recessed doorways), and terminating with spire and floriated cross, is situated centrally on western side. In the eastern gable, is a window (of seven bays and traceried head), width, 12 feet; height, 21 feet, to springing of arch. The plan consists of nave, chancel, aisles, and lateral chapels, dimensions, interiorly, being, 171 feet by 61 feet in the clear. Roofs to be of open Memel timber, the principals being arch ribbed, stop chamfered, boarded, stained, and springing from stone corbels. Style, Gothic, of fourteenth century. Mr. J. S. Butler, architect.

The new R. C. church at Rosstrevor is to be dedicated shortly.

Generally speaking, the building trade is dull through Ireland, owing to the increased price of materials.

The O'Connell monument is at length commenced, the first stone having been laid last month by Sir J. Power, Bart. As our readers are aware from a former description in the *Builder*, it consists of a small church, round tower (160 feet high), and ancient stone cross, after a design by Dr. Petrie, and is situated on a rising ground, in Glasnevin Cemetery, Dublin, where the remains of O'Connell are laid. Mr. P. Byrne is the architect, and Mr. Mayers the builder.

The new church at Ballybrack, has been dedicated and opened. It is situated on the south side of Killiney-hill, county Dublin, style, decorated Gothic. The plan is cruciform, length being 100 feet by 60 feet, in width. Scripture scenes representing the Annunciation, Nativity, Crucifixion, and Resurrection, also the Four Evangelists are displayed in stained glass. Mr. Byrne is the architect: Messrs. Doolin, builders.

ST. JOHN'S, DEPTFORD.

MUNIFICENCE.

On Monday, the 2nd instant, the first stone of St. John's Church, Deptford, was laid by the Archdeacon of Middlesex. The church will be a gothic structure of large dimensions, beautifully situated on a hill adjoining the Lewisham road. A number of the clergy and gentry of the neighbourhood were assembled on the occasion. Archdeacon Sinclair stated that one munificent individual had placed 10,000*l.* at his disposal to build a church, parsonage, and schools in the parish of Deptford; and that to meet this contribution, he had been presented by another liberal friend of the church (James Lucas, esq.) with an elegant villa and garden, for a parsonage, and also with commodious sites for the church and for schools.

ARTISTICAL NEWS FROM ABROAD.

Kaulbach's Work at Berlin.—Instead of Muhr, who is gone to Italy, Kaulbach's younger brother works now at the completion of the "*Hunnenschlacht*," which will occupy one of the walls preceding the staircase of the new Museum of Berlin. The fifth of these historical allegories will represent the Crusaders.

The Germanic Museum and the Duke of Coburg.—This collection is intended to become a great national undertaking, and to be located (at present) at *Nuremberg*. Still, the Duke of Coburg has repeatedly expressed his readiness, that if these hopes should be frustrated, he adheres to his former promise to have the museum brought to Coburg, where the extensive antiquarian collection of Coburg Castle has been of late perfectly rearranged. His royal highness also intends to build a chapel and family vault on the Glockenberg, near Coburg; the chapel to be of the Byzantine style, in the form of a basilica, 80 feet long, 70 feet broad, and 60 feet high. It will consist of one principal and two lateral naves, the latter to be the mausolea of the Coburg family.

An Idea for the Crystal Palace.—At a late meeting of the Nether-Rhine Society, Colonel Siebold stated, that Professor Göppert, in Bresslau, had put into practice the idea of Humboldt concerning botanical physiognomic groups of plants. The colonel further added, that being the proprietor of a botanical establishment at Leyden, he had arranged groups of Japan plants, which had been acquired by several superior *educational* establishments of Germany. Still, there was some difficulty in placing together groups of analogous families of plants, nevertheless dissimilar in the temperature and other conditions required for their growth. The intrinsic reproductiveness of a similarly planned garden might recompense for any trouble or expense.

Practical Aspects of Art in the United States.—*New York.*—The engraving after *Leutze's* picture, "Washington's Passage of the Delaware," enjoys here a great popularity and sale, but would sell still better if it were strikingly illuminated. Colours exercise a great influence on people not yet educated to the viewing, as it were, of abstract forms. Sculptors and carvers find here a prolific field, as every day the sumptuousness and luxury of the interior of the houses in decorations, furniture, &c. progress in a ratio hardly dreamed of in Europe. In especial favour are also engravings of Swiss scenery and striking *genre* pieces—the antecedents and the ground for hope that successively that rich and wealthy nation will increase in the love and patronage of *art*.

BLACKFRIARS' CROSS, HEREFORD.

During a recent sojourn for two or three days in the city of Hereford, I paid a visit to this beautiful cross. It is, as no doubt many of your readers are aware, in the form of a hexagon, open on each side, and surrounded by a flight of steps. From a base of the same figure in the centre, with two trefoil arches on each side, springs the shaft of the cross, which, spreading out into ramifications, forms the roof of the pulpit; and through this roof the shaft passes. A buttress supports each angle of the cross, and the upper part of it is embattled. I much regret to find it in a very dilapidated state; so much so, that it is evident, unless something is speedily done to preserve it, it must fall: several cracks appear in the roof, and some of the stones in the buttresses are fast going to decay. All who have seen it will, I am sure, be sorry to lose so beautiful and interesting a memorial. I trust soon to see it restored, or, if this cannot be done, to see some measures taken to arrest the decay. Lessons may be learned, and people instructed, by these remains of the piety and art of our forefathers, and I think that the worthy and learned dignitary of the cathedral church in that city, who is doing so much for the education of the people and the promotion of art, must have forgotten this beautiful structure. I regret also to observe that the restoration of the cathedral, though commenced and in a great measure completed, has not been proceeded with for a long time.

O. S.

VALUE OF LAND.

CRYSTAL PALACE RAILWAY COMPANY.

An inquiry took place before a jury at the Horns at Kennington, on the 26th and 27th inst. to assess the value of 2 r. 25 p. of freehold building land (and severance), situate in York-crescent, on the north side of Crown-hill, Norwood, Surrey, the property of Mr. Divers, required by the Crystal Palace Railway Company. Several witnesses were examined for the claimant, including Mr. Ellis, Mr. Stroud, and Mr. Corner, who valued the land at 4,174*l.* and the severance at 4,506*l.* making the total value, 8,680*l.* On the part of the company, Mr. R. A. Withall, Mr. Charles Lee, and Mr. William Rogers, surveyors, were examined, whose valuations were respectively 400*l.* 458*l.* and 500*l.* Mr. Bovill and Mr. Hawkins were counsel for the claimant, and Mr. Wells for the company. The inquiry occupied the whole of two days, and resulted in a verdict for 650*l.* which included the severance!

KILKENNY ARCHÆOLOGICAL SOCIETY.

The September meeting of the Kilkenny and South-east of Ireland Archæological Society has been held; Lieutenant-General McDonald, C.B. in the chair; when thirty-five new members were elected.

Since the last meeting, the museum has been considerably enlarged, and one compartment was entirely devoted to the display of the splendid collection of rubbings from English sepulchral brasses, presented, some time since, by Mr. Paget, brother of the Marchioness of Ormonde. The secretaries laid on the table the proceedings and transactions of the July meeting of the society, now ready for delivery to the members. Various donations were received, and thanks ordered to be given to the donors.

The principal feature of the meeting consisted in the large number of Ogham monuments brought under notice, the existence of two of which was now for the first time made known to archæologists. Mr. Graves directed the attention of the meeting to a very fine example of this class of monument, presented to their museum by Mr. Hugh N. Nevins, of Waterford. Mr. J. C. Tuomey, master of the Burnderrig National School, Wicklow, communicated the discovery of a fine cromleac and hitherto unnoticed Ogham monument, situate near the church of Castletimon, parish of Kilbride, and barony of Arklow, county of Wicklow. Of the Ogham he sent a rubbing, and a graphic paper descriptive of the monument.

General M'Donald observed upon the universality of the tradition respecting the casting of remarkable stones by giants in every Celtic country. A remarkable boundary stone on his own property, in the Highlands of Scotland, was said to have been flung across a neighbouring lake by a Fenian hero.

The Rev. James Goodman, and Mr. J. D. Macmahon forwarded papers treating of Tullachs (burial-places). They were ordered to be printed in the transactions, together with other written communications made at this meeting.

Mr. Prim drew attention to a peculiarity in the ancient street architecture of Kilkenny, connected with a shop in High-street, traditionally said to have formed the residence of the regicide Axtel, whilst governor of Kilkenny.

Mr. Clarke informed the society that since last meeting he had found, at Kilcrecene, another very small sepulchral cist, somewhat similar in character to the *second* then mentioned.

Mr. Edward Hoare, of Cork, communicated an account of a hitherto unedited Hibernico Danish coin, with engravings which he notified his intention of presenting to the society.

Mr. Graves stated, with reference to the recent extraordinary discovery of gold ornaments in the county of Clare, a portion of which, purchased for upwards of 700*l.* at the current price of gold, he had recently seen in Dublin, that he had been informed by Mr. F. Barnes, C.E. the then contractor of the Limerick and Ennis Railway, that the discovery had been made about two miles north of the town of Newmarket-on-Fergus, whilst ditching the line.

Mr. Clarke called attention to the broken condition of the curious old cross of Dunamaggin, so faithfully illustrated in Mr. O'Neil's work on the ancient crosses of Ireland.

A paper was read at this meeting on the promontory of Hook, county of Wexford, by the Rev. James Graves, which excited an interesting discussion.

FALL OF A MANUFACTORY AT SHEFFIELD.

A SERIOUS casualty occurred on Saturday week, at the Castle Mills, or Tower Wheel, an extensive manufactory in Sheffield, for rolling steel, grinding cutlery, &c. The outer wall, which was of brick, and about 30 feet by 90 feet long, fronting towards the Wicker, fell down and brought with it a row of workshops abutting on it. Eight persons, men and boys, were extricated from the wreck, several of them being injured in a distressing manner. One of the workmen had noticed, on the erection of some new boilers a few months ago, that a portion of the outer wall had bulged, and that one of the piers had sunk considerably. He was, however, assured by the masons who were then working that the building was perfectly safe. Immediately after the occurrence Mr. S. Parker, the proprietor, instructed Mr. C. Fowler, C.E. to ascertain the cause of the accident, and carefully examine the building. The cause, it appears, has been traced to the imperfect manner in which the tension rods, intended to strengthen the arches which formed the floor of the five fallen "hulls," had been inserted. The rods at one end were cottered to the inside of the iron girder resting on the pillars, while the other ends, instead of being cottered, were merely hooked over the upper flange of the V girder inserted in the outer wall. The vibration from the working of the machinery and the expansion and contraction of the rods, had gradually worked the hooked ends out of their position. From the fact that all the hooked ends of these rods were found perfect, except one, which is broken a few inches from the end, it has been surmised that this single rod had retained its position, and for some time had been the only one rendering any material support, and that it suddenly broke at the instant the outer wall fell. It is somewhat singular that the only part of the work ever observed to be defective was left standing, while the remainder of that side fell. The saving of this portion is attributed to the outer wall having been strengthened by the erection of the flue pillar. Mr. Fowler, according to the local *Independent*, has received instructions from the owner to prepare plans for rebuilding the fallen portions of the premises of such strength as to preclude the probability of future failure.

Notices of Books.

The Irish Industrial Exhibition of 1853. Edited by JOHN SPROULE. Dublin: M'Glashan. London: Orr and Co. 1854.

THIS is a large and handsome volume, somewhat in the style of those containing the record of the Industrial Exhibition of 1851. It comprises a detailed catalogue of the contents of the Irish Exhibition, with critical dissertations, statistical information, and accounts of manufacturing processes in the different departments; together with numerous illustrations in wood, a litho-chromotype view of the central hall of the Exhibition, and a portrait of Mr. Dargan, as mainstay, engraved in steel, and accompanied by a memoir. In the outset of the volume, there is a well-written introduction, followed by a detailed description of the building, with diagrams and sketches. The editor has been aided by various contributions made by other competent writers, and the whole constitutes a very full and complete record of an exhibition, the like of which may not be seen in Dublin again for many a year, if even in the present generation.

Miscellanea.

RAILWAY MATTERS.—On Sunday morning before last a fatal accident, occasioned by the falling of some massive wooden supports in one of the archways of the Cann viaduct, occurred to a young man belonging to Moulsham. When the railway was made, the foot-path from Moulsham to Writtle, near Chelmsford, was cut off by the high embankment, and was carried round under the first arch of the viaduct, a raised causeway formed of a brick wall 2 or 3 feet high, capped with stone, being made to protect it from the flood. In this archway the woodwork of the centering on which it was built was left, together with the rows of square timbers which supported it, as some protection, it appears, against the lateral pressure of the embankment, upwards of 40 feet high, that might be brought to bear on it. This arch was a common resort of children and loiterers from Moulsham; and as it now appears that the woodwork was in a dangerous state, having stood eleven or twelve years, and the timber supports having become decayed from the wet, it is fortunate that a greater sacrifice of life had not taken place.——Mr. Bullenor, contractor for making the roadway of the new branch railway from the Crystal Palace to the Brighton Railway, was crushed to death lately by some waggons containing earth, and drawn by horses.——The launching of the cylinder for the Royal Albert-bridge, across the Tamar, was noted by us some time since. The operation of lowering this immense cylinder, within which is to be built the entire pier for the support of the bridge, has since been effected. The cylinder, constructed under the superintendence of Mr. Campbell, the engineer of the works, and weighing 300 tons, being 90 feet in length, 37 feet in diameter at the top, and 35 feet in diameter at the bottom, was not only floated successfully from the shore of the Tamar to the centre of the river, but has been there sunk, perpendicularly, to the rock, penetrating through 14 feet thickness of mud, and at high tide it is covered by water to within 6 feet of the top. When completed, this work will rival the Britannia Tubular Bridge for daring and effect.

ELECTRO-TELEGRAPHIC PROGRESS.—Farther experiments, it appears, have been made by Mr. Lindsay of Dundee with his new patent transmarine telegraph without submarine wires. Messages have been transmitted across the harbour at Portsmouth, a distance of 950 yards, from the Blockhouse Fort to the Sally-port round tower, and notwithstanding the intervention of a number of copper-bottomed ships, immense iron chains, &c. (!) the success of the experiment is said to have been complete. The subject excited some interest and discussion at the Liverpool meeting of the British Association, where the chairman of the section engaged in the discussion declared his opinion that such a telegraph might be practicable between Dover and Calais, or even between Europe and America! One essential condition of success, if we mistake not, is that the land wires on each side must consist of a coil of a certain length, increasing in proportion to the length of transmarine conduction. It is nearly ten years, it is said, since Mr. Lindsay discovered the possibility of making such a telegraph.

CAMDEN-ROAD CHAPEL.—The first chapel erected by the Baptist Metropolitan Chapel-building Society, has been opened. It is situate on the top of Carlton-hill, in the Camden-road, about midway between Camden-town and Upper Holloway, in the parish of St. Mary's, Islington. According to our informant it is built in the perpendicular style of Gothic architecture, of Kentish rag-stone, faced with Bath-stone dressing, and has two towers in front. The interior roof is open-boarded. The baptistery is of enamelled slate. The chapel is 101 feet in length, and 58 feet wide, and will seat nearly 700 persons. The building has cost in all the sum of 5,265*l.* The architect was Mr. C. G. Gearle.

OAK: AN INQUIRY.—A handsome new oak door which was put into the south entrance to our parish church in 1845 has become, in consequence of exposure to the sun during the last nine years, of a dull dirty mouse colour, and is a sorry sight for the eye. We should feel much obliged if you would recommend a treatment for it which will enable it to bear the exposure it is always sure to meet with so long as the sun rises in the east and sets in the west,—if there be any. Would simple varnish answer the purpose? A reply in your valuable journal might be of great service to churchwardens and others.

O. W. W. F.

*** Some of our readers will perhaps favour us with their experience on the subject.

BATHS AND WASHHOUSES FOR KIDDERMINSTER.—The first stone of this long talked of establishment, has at length been laid. The site is in Mill-street. The building will be in the Italian style, having a frontage of 78 feet, being 30 feet high, and reaching 56 feet back towards the Stour. It will be of red brick, with stone dressings, and as Mill-street is liable to floods, the basement, to the height of 3 feet 6 inches, will be of Ombersley stone. The brackets at the top and cornices will be of terra cotta. There will be two entrances in front, one for male and the other for female visitors. The swimming bath will be 37 feet by 30 feet, varying in depth from 4½ feet to 5½ feet. It will also contain a plunging bath for ladies, 10 feet by 10 feet: each of these will be enamelled with Stourbridge clay. There will be four first-class men's baths, one vapour bath, and eight second-class; two first-class ladies' baths, and two second-class. The washhouses are 40 feet by 16 feet, in which there will be eight boxes to accommodate ten women at a time, each woman having the use of three tubs. Mr. Goodwin, whose premises adjoin, has kindly offered to have gear put upon his wheel, by which water will be supplied to the premises, thus saving the expense of an engine on purpose. It is expected that the building will be finished in January of the ensuing year. Messrs. Ashpitel and Whicheord are the architects; Mr. Dean, clerk of works; and Mr. H. Aukrett, the builder. The cost will be defrayed by the assistance of Government loan, repayable by yearly instalments. The mayor laid the first stone on Friday in last week. The establishment was originally called for by a memorial of 400 ratepayers to the town council.

IRON THEATRE FOR AUSTRALIA.—Messrs. E. T. Bellhouse and Co. of Manchester, are constructing an iron shell and framework of a portable theatre for Australia, which, with all fittings and appurtenances, will cost a sum exceeding 4,000*l.* The building is to be 88 feet in length, 40 feet wide, and about 24 feet high from the ground level to the peak of the roof. As the floor level of the pit will be sunk about 5 or 6 feet below the ground level, and hence will really be a *pit*, there will be considerable altitude in the interior. The walls will be of cast-iron, uprights (Bellhouse's patent), and galvanized corrugated iron sheets, No. 18, wire gauge. The roof will consist of iron principals, having the galvanized sheets bolted thereon. To the gable end of the building, which forms the front, will be attached an ornamental appendage arranged as box and pit offices, lobbies, and entrances. Ornamental effect will be given to this façade. The pit will extend back from the footlights to the wall below the boxes about 54 feet, and be 59 feet across. The gallery for the boxes will project 24 feet from the wall opposite the stage, and 8 feet from the wall on each of the sides of the theatre. This gallery will be supported on iron columns and strong framework of timber. Messrs. Bellhouse undertook the complete shell of the building, the ornamental façade, and principal framework of the interior, and had engaged to have the whole on board ship in London in about thirty days from the date of contract.

LIGHT ON NORTH LONDON AND KEW JUNCTION RAILWAY.—Can you inform me on what principle of justice or equity the metropolitan omnibuses, passing through well lighted streets, and where a policeman can be hailed at a moment's notice, are compelled to carry a lamp inside as a protection to twelve passengers, while the second-class carriages on this line, passing through two tunnels, and holding at least thirty persons, are left in complete darkness? The medical profession contrive to prevent a good deal of injustice, by having a solitary member of their body in the House of Commons. We must really endeavour on the next vacancy in Finsbury to return Mr. Wilson, the omnibus proprietor, as a representative. —W. H. B.

LOSSES.—We have to notice with regret, the death of Mr. E. W. Brayley, long the esteemed coadjutor of Mr. Britton, and the author of the "History of Surrey;" of Mr. Bartlett, well known by his illustrated works, especially on the East; of Mr. Willson, the architect, of Lincoln; of Mr. Brockedon, and some others known to our readers. We hope to put on record before long some particulars of each of these gentlemen, and to express the sorrow with which we regard their loss.

IMPROVED DWELLINGS.—A deputation from "The National Association for the Improvement of the Dwellings, and for the Elevation, of the Labouring Classes," had an interview with Sir Benjamin Hall, at the office of the Board of Health, on Tuesday in last week, when their scheme of operations was submitted to him.

IMPROVEMENTS AT THE LONDON TAVERN.—During the last few weeks this great establishment has been completely redecorated, at considerable cost. The banquetting rooms have been newly fitted up, and additions made to the kitchen department.

The Justice-room in London Mansion-house.—Great complaints are again made of the want of ventilation in the Justice-room at the Mansion-house. The Lord Mayor believes that the only remedy is the removal of the Justice-room elsewhere. We drew attention to it some time ago.

State of Rochester.—We are not a little surprised to learn that much of the property complained of by "An Architect," who recently visited Rochester, as being in a filthy and disgusting condition, belongs to the Bridge Wardens, and that the slaughter-house which so offended his nostrils in the midst of a crowded population, is leased from the Corporation. Since "An Architect's" letter appeared in our columns, a stir has been made amongst the filth, and some of it cleared away, but not until there had been ten deaths from cholera in the neighbourhood of the very corporation slaughter-house complained of! [how many more elsewhere in Rochester at same time we do not know, and even yet, we learn, the surface is so saturated with abomination, that a stratum of it would require to be removed ere anything but a partial abatement of the nuisance could be effected. The fact of a slaughter-house, however cleanly kept, being allowed to occupy such a position, is bad enough, more especially as corporation property, but a corporation which not only makes a profit of such a nuisance but allows it to become so beastly and so deadly in its influence, ought to be themselves indicted as a nuisance. One notable circumstance we find recorded in a Rochester paper by the Rev. R. Whiston in regard to these Rochester nuisances is, that in five fatal cases of cholera in St. Nicholas', the victims were married women whose husbands (elsewhere occupied throughout the day) escaped the pestilence. So much for those who maintain that bad smells have nothing to do with cholera.

The Russian Fortifications.—There is another *contractor* to blame, it appears, for the utter insufficiency of the formidable-looking Russian fortifications, besides the Bomarsund contractor. "John Frost" would appear, from the following valuable scrap of information, direct from Bomarsund itself, to be one of those enormous offenders whom the Czar ought to "send to Siberia," only he is there already. "I shall bring home a piece of the granite of Bomarsund for you," writes an officer: "*it breaks almost as easily as coal*. The intense cold of this climate destroys even stone in a few years." Upon this hint let Napier act. If too late till next "session," Cronstadt and Helsingfors may, in more senses than one, be safely handed over, for the winter, to a stronger force than even British naval force, as a farther help towards their bombardment. There is doubtless much truth in what this officer writes, and of course it applies to all the Baltic fortifications. Why, the sand-baskets of Silistra are of tougher material than the granite batteries of Bomarsund, which seem much more to have resembled the ice palaces of their own native Russia. We shall be excused, we trust, for adding here, though rather irrelevantly, that *when* Sevastopol *is* demolished also, as it very soon will be, if it be not already, as so confidently rumoured—it is to be hoped the muzzled Menschikoff will *once more* be sent (though not by the Czar) to Constantinople, attended by as imposing a retinue of *adherents* as this Bombastes-Furioso had before. The *effect* would be excellent, even though somewhat tragi-comical.

Cemetery Chapel Competitions.—The account of a clay-brickæological design, sent in to the Ely Burial-board, is a very fair piece of satire upon the system now becoming, it is to be feared, too easily and firmly established), for cheaply furnishing new burial-grounds with buildings. It must have gladdened the heart and awakened a train of thought responsive in the breast, of many a competing architect, who has been led to throw away his time upon the insignificant enterprises in Gothic architecture and landscape gardening that are offering themselves from time to time to the world-professional. If architects cannot stop this plan of putting on the screw, this evocation of a goodly array of designs, when the aggregate of premiums (if any be offered) may not amount to 10*l*.—let them at least do all they can to bring it into disrepute. If my memory fail not, plans were called for in one instance for a lodge to contain mourners' room and keepers' apartments for 200*l*. and two chapels for 600*l*.!—Vox Sepulchralis.

Inauguration of the Melbourne Athenæum.—On Tuesday in last week, the Melbourne Athenæum building, designed by Mr. H. I. Stevens, of Derby, architect, was opened with several festive associations. A good number of visitors and townspeople enjoyed themselves in the hall gardens, and on the lake and islets, to the music of three bands. In the evening tea was served in the lower room of the new building, and afterwards addresses appropriate to the occasion were delivered in the upper room, which was filled with a respectable audience of nearly 300. The building is designed for a threefold purpose—that of an infant school, mechanics' institution, and savings' bank.

Sale of a Portion of Giltspur-street Prison.—Messrs. Pullen and Son, auctioneers to the City Corporation, last week put up for sale the third portion of the materials of Giltspur-street Compter and House of Correction, comprising the whole of the stone frontage in Giltspur-street, and containing upwards of 2,000,000 stock bricks, 5,000 feet of sheet copper on the roofs, 10 tons of lead in gutters, tanks, and pipes, &c. The sale also included the whole of the timber in the roofs and floors, sashes, marble chimney-pieces, and interior fittings up of the governor's house, stone staircases, railed gate-fences, drying apparatus with machinery, iron steam-boilers, baths, pumps, gas-fittings, &c. The materials for the first day's sale were divided into eighty-nine lots, and those for the second, into ninety-six lots. These comprise the entire building. The whole is to be taken down to the level of the street, and removed forthwith.

Roman Remains at Bath. At the late meeting of the Somerset Archæological Society, at Taunton, the Rev. H. M. Scarth, rector of Bathwick, read a paper on the subject of stone coffins, many of which have from time to time been found in the neighbourhood of Bath. He said that previous to the last meeting of this society in that city a discovery of several of these was made in Russell-street, one of which was opened and examined at the time of the meeting. Excavations were being made for the purpose of repairing a sewer, and while the work was proceeding four stone coffins were discovered, with the heads lying to the north-east. A wall, taking a north-east direction, was also discovered: it was 3 feet wide at the base, tapering towards the top, and constructed of rough-hewn stones, connected by mortar or cement. A portion of it was laid bare, and found to form part of a circle: this was 9 feet from the spot covered by the head of one of the coffins. It was supposed by some that this wall indicated an inclosure for the purposes of sepulture, but another view was that it served as a boundary between a burial place and the Roman road, which it is known ran along at the top of the street. Similar discoveries had been made at Combe Down, where also the remains of a Roman villa were found. If the coffins discovered at Bath were not actually Roman, there could be little doubt that they must be referred to the period just preceding the Saxon invasion, and be attributed to the Romano-British inhabitants of the island, who retained a Roman mode of life, while they fell far short of the Romans both in arts and arms.

Nuremberg Ironwork.—The *Art Journal* for the current month has a pleasant article on this subject, with ten illustrations. The papers on the Domestic Manners of the English contain references useful to architects and decorators.

Assyrian Discoveries.—According to the last annual report of the Royal Asiatic Society, the excavations of Mr. Taylor at Umgheir have satisfactorily proved the architectural plan of the Babylonian and Chaldæan temples, showing that they were built stage upon stage, with a single chamber at the summit as the adytum—in fact, in precise accordance with the description given of the Temple of Jupiter Belus, by Herodotus, 1181. The chronology of Assyria has received a valuable accession by the discovery of a record of one of the early kings, whose name is read Tiglath-Pileser, like that of the later King of Assyria known to the Hebrews. Tiglath-Pileser the First was shown to have flourished 418 years before the reign of Sennacherib, by a passage in an inscription which had been translated by Dr. Hincks, to whom Mr. Layard communicated a copy. The same learned scholar subsequently found a cylinder of Tiglath-Pileser in the British Museum, recording the construction of a temple at a preceding date, which he satisfactorily proved to correspond either with 1750 or 1840 B.C. This discovery he published in the month of July; and it is gratifying to be enabled to state that Colonel Rawlinson fully confirms this discovery, having since found a duplicate cylinder in a more perfect condition, which shows that the earlier date—or 1840 B.C.—is the correct one. The colonel's letter which communicated this was read at the meeting of the 4th March last. From letters more recently received from that gentleman, we learn that he has read the name of Semiramis on a statue of the god Nebo, dug up from the ruins of the Palace of Nimrod. Semiramis appears, in a legend upon the statue, to have been really the wife of Pul, king of Assyria, the same as is mentioned in the Book of Kings, the contemporary of Menahem, king of Israel. This would place Semiramis 150 years before Nebuchadnezzar, which will curiously confirm the tradition recorded by Herodotus, that this queen preceded Nitocris by five generations, equal to 150 years. It is observed by the colonel, that the works which Herodotus attributes to Nitocris were certainly erected by Nebuchadnezzar, as is duly attested by Berossus, and recorded in the "Babylonian Cuneiform Annals," and he conjectures accordingly that Nitocris was the wife of Nebuchadnezzar.

The Iron Trade.—At the preliminary quarterly meeting of the ironmasters of the Birmingham districts, held on 28th ult. it was resolved to abide by present prices, but whether we are to understand by this the nominal prices fixed by themselves at their last quarterly meetings, or the actual prices at present realizable, it is hard to say. The oracle is becoming more and more equivocal at each successive sederunt on the iron *tripod* (*i.e.* "quarterly"). As for present prices, it is admitted that there is no doubt bar iron can now be purchased below the nominal quotations, even in Staffordshire. Pigs, too, have lately fallen at least 10s. a ton.

Museum of Ornamental Art.—The museum at Marlborough House was to be re-opened on Monday. During the recess the specimens have been re-arranged and considerable additions made. The collection of arms from the Royal armoury at Windsor will continue to be exhibited. An alteration has been made in the days of admission. In future the museum will be opened on Saturdays, which will be free days, instead of Tuesdays. This change has been made chiefly to enable the schools in the metropolis to send their students to visit the museum on the afternoons of Saturdays.

Locksmiths' Strike.—At the Wolverhampton Police Court, on Saturday week, Messrs. Moseley, locksmiths, summoned some workmen who, during eight days, had been out on strike for an advance of wages, for not completing work in hand. Defendants contended that it was a custom of the trade to leave unfinished work that remained so at the period at which a notice to strike terminated. The bench recommended the men to return and complete their work, adding, that if pressed for a decision, they must convict. Defendants' attorney recommended his clients to act upon the advice of the bench.

To preserve Steel Goods.—Mr. T. E. Minshal, of Westminster, has forwarded the following receipts for the information of an Oswestry correspondent:—Take of caoutchouc, one part; turpentine, sixteen parts. Dissolve with a gentle heat, then add boiled oil, eight parts. Mix by bringing them to the heat of boiling water: apply it to the steel with a brush, in the way of varnish. It may be removed when dry, with turpentine. The oil may be wholly omitted. Another and simpler method is to mix five parts of linseed oil varnish with three parts of rectified oil of turpentine, and smear the article over it by means of a sponge: then dry in a place free from dust.—*Journal of Society of Arts.*

TENDERS

For the execution of the works on the Economic Freehold Land Society's estate at Wood-green, Hornsey; Mr. John Wm. Mines, surveyor:—

Watts (Poplar)	£1,382 4 10
Dodd (Hoxton)	1,350 1 3
Kelly (Bermondsey-wall)	1,315 1 0
Strickson (Kilburn)	1,246 15 4
Cole and Clements (Norwood)	1,066 2 6
Frasher (Bayswater)	972 15 4
Culverhouse and Nicholson (Finchley), accepted	967 0 0

For the Parochial Schools, Hampstead; Messrs. Habershon, architects. Quantities supplied:—

Legg	£3,512 0 0
Higgs	2,992 0 0
Myers	2,820 0 0
Newby	2,597 0 0
Rowland and Evans	2,564 0 0
Johns	2,470 0 0
Clever and Stanger	2,430 0 0
B. and C. Hayne	2,369 0 0

*** The tenders given last week were for the Christ Church Schools, at Hampstead. Both were opened on the same day.

One Shilling, with Illustrations.

ADVERTISEMENTS.

ABERDARE, GLAMORGANSHIRE.
SURVEYOR WANTED. The Local Board of Health for the parish of Aberdare are prepared to receive APPLICATIONS from candidates for the Office of SURVEYOR for the above parish. He must be competent to prepare plans, drawings, estimates, and specifications of all works connected with the sewerage, paving, making, and repairing of the streets, as well as surface cleansing, and to superintend the execution thereof, test the materials, and see to the fulfilment of the conditions of the contracts for executing such works. He will also be required to report upon all new buildings within the parish, as to the drainage, levels, and other conveniences, and also upon cases of nuisance, involving structural alteration for abating the same; and generally possess a thorough knowledge of all the duties required by the Public Health Act, 1848. There will be no restriction as to his private practice within the district of the Merthyr Tydfil Union. Persons desirous of undertaking the duties of such appointment are requested to send in their application and testimonials, stating the amount of salary required, addressed to me, indorsed "Application for Surveyor," on or before SATURDAY, the 29th day of OCTOBER instant. The board do not engage to accept the lowest or any offer.
By order, H. J. HOLLIER, Clerk.
Aberdare, 2nd day of October, 1854.

BUILDERS' CLERKS, who thoroughly understand the routine of the office, may apply, by letter, to H. E. I. Post-office, Nottingham, stating terms, reference, and age.

FOREMAN of SMITHS WANTED, in an engineer's establishment in town; he must have filled a similar situation before, be a good workman, and used to heavy and general work. Address, stating where last employed and wages received, to B. R. Office of "The Builder."

TO PARENTS AND GUARDIANS.
TWO Architects, in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter to A. B. 16, Waterloo-place, Regent-street.

TO ARCHITECTURAL ASSISTANTS.
WANTED, a superior and very rapid PERSPECTIVE DRAUGHTSMAN, and a first-rate ARTISTIC COLOURIST, understanding Gothic architecture, and able to sketch the human figure and foliage; foregrounds, &c. None but assistants of the highest qualification need apply, and no time will be taken of applications which do not state the lowest salary required.—Address, enclosing reference, to INIGO JONES, Office of "The Builder."

TO SURVEYORS.
WANTED, some SURVEYORS.—Apply by paid letter only, to A. B 25, Upper Eaton street, Pimlico, stating experience, terms, and reference.

TO ENGINEERS AND STEAM-MILL SAWYERS.
WANTED, immediately, an experienced Man to MANAGE the working department of a SAW-MILL —Address, FINMIS and NEAME, Dover.

TO CARPENTERS.
WANTED, a steady active Man, who understands the leading trades, as FOREMAN in a small building business. He must be capable of making working drawings, setting out and measuring work, and if required, to fill up his time at the bench.—Address, stating terms, &c. to R. NIXON, Woburn, Bedford-hire.

TO PARENTS AND GUARDIANS.
WANTED, in a Surveyor's Office, of forty years' standing, a respectable, well-educated Young Man as an ARTICLED PUPIL, who would have immediate advantages of seeing and assisting in the practical part of some very extensive surveys and valuations, with the general routine of an office. Further particulars may be known of Messrs. POOLE and DAVIE, Land Agents, Engineers, Land and Timber Surveyors, Auctioneers, & Sherborne, Dorset.

WANTED, a CLERK of WORKS.—The Local Board of Health of the Borough of Derby require an active, steady, and intelligent Person to act as CLERK of WORKS to the extensive SEWERAGE WORKS now in course of construction by the Board, in this Borough. The engagement will be for a period of not less than twelve months. Applicants are requested to state the amount of salary required, their late or present employment, and to forward therewith testimonials of character and qualifications, which should be received on or before THURSDAY, the 12th day of OCTOBER, inst., addressed "To the Chairman of the Sewerage Committee, care of Mr. JOSEPH JONES, Clerk to the Local Board, Derwent-street, Derby."

TO ENGINEERS, FITTERS, &c.
WANTED, by a London House, a WORKING FOREMAN; he will be required to superintend a few men, who are generally on piece-work, and to keep in repair the tool and working gear of the manufactory; he must also be competent to make an ordinary working drawing, and willing to make himself generally useful. Wages, 30s. per week.—Address, post paid, X. Y. Z. 5, Kirby-street, Hatton-garden, London.

TO CARPENTERS AND BUILDERS.
WANTED, a MASTER for a stout active YOUTH, about 16, his master having failed, to whom he has been apprenticed about eighteen months.—Letters, prepaid, addressed to G. BURCHELL, Grocer, Wyndham-road, Camberwell.

TO BRICKMAKERS.
WANTED, by the Advertiser, a Situation as FOREMAN in a BRICKFIELD, one who has had twenty years' experience in making and burning bricks and tiles of every description, or by Contract. Good reference can be had from either town or country. Address T. K. 6, Colden-terrace, Notting-hill, London.

WANTED, a RE-ENGAGEMENT, by a Young Man, fully acquainted with the duties of a builder's office.—Address, H. L. 5, Northumberland-street, Newroad.

TO BUILDERS.
WANTED, a SITUATION in the Country, as STAIRCASE-HAND or JOINER. Has served fifteen years in two large firms in London in the above branches for light work. Moderate wages will satisfy. Satisfactory reference can be given. The hand-railing on improved principles.—Address, F. W. F. Office of "The Builder."

TO COUNTRY PAINTERS AND BUILDERS.
WANTED, by a Young Man, a SITUATION as PAINTER and GLAZIER. Can do writing and graining. The country preferred. Address A. Z. at Wm. Ash's, Painter, 20, Bear-lane, Blackfriars-road, London.

TO ARCHITECTS AND BUILDERS.
WANTED, by the Advertiser, a SITUATION in an Architect's or Builder's Office; is capable of making working drawings; is a good draughtsman, and has a general knowledge of his profession. A moderate salary only required. The most satisfactory reference will be given.—Apply, W. S. care of Mr. Squire, Hanwell, Middlesex.

TO BUILDERS, PLUMBERS, &c.
WANTED, by an experienced Young Man, a SITUATION as THREE-BRANCH HAND, or PLUMBER.—Address, stating terms, J. V. B. 17, Crescent-street, Euston-square, Saint Pancras.

TO PROPRIETORS OF SAW-MILLS OR BUILDERS.
WANTED, a SITUATION as SAW-SHARPENER or BENCH-MAN, with three years' character. Town or country no object. Direct S. H. 6, Earl street, Lisle-street, Marylebone.

TO PAINTERS, BUILDERS, &c.
WANTED, a SITUATION as GENERAL HAND. Can do sound work writing, graining, gilding, &c. Is of sober and steady habits, and has had upwards of twenty-five years' practice.—Address, M. 16 Gray's-inn lane, Holborn. No objection to the country, if permanent.

TO CIVIL ENGINEERS AND OTHERS.
THE Advertiser, a Young Man, desires a re-ENGAGEMENT. He is well versed in mathematics, is a fair architectural draughtsman, understands levelling, surveying, plotting, planning, mapping; likewise French, Italian, and book keeping. Reference to former employer.—Address, X. Y. 39, Great Queen-street, Lincoln's-inn fields.

TO ARCHITECTS.

TO PAPER-STAINERS, PAPER-HANGERS, DECORATORS, HOUSE PAINTERS, and BUILDERS.—WANTED, a SITUATION, as TRAVELLER or FOREMAN, by a practical Man, thoroughly acquainted, from experience, with every style of decoration and harmony of colour, and able to measure and make out estimates.—Address to S. H. 104, Blackfriars-road.

TO BUILDERS, ARCHITECTS, AND SURVEYORS.
A CLERK wishes for a SITUATION in either of the above offices, is willing to make himself generally useful. Salary not so much an object as constant employment.—Address, Z. 59, Huntingdon-street, Thornhill-square, Islington.

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLOURIST OFFERS his SERVICES in the preparation of perspective views, the tinting of backgrounds, and the introduction of landscape; also in general drawing and lithography. Terms very moderate.—Specimens of ability can be seen by addressing A. Z. 20, Denbigh-place, Belgravia.

TO BUILDERS, CONTRACTORS, AND OTHERS.
AN experienced and practical Person is desirous of EVENING EMPLOYMENT in keeping builders' accounts. Quantities taken out, estimates prepared, and all kinds of architect's work measured on moderate terms.—Apply personally or by letter prepaid to W. DOWNE, 11, Stanmore-street Caledonian-road.

TO ENGINEERS, ARCHITECTS, SURVEYORS, OR CONTRACTORS.
A GENERAL DRAUGHTSMAN and experienced Land Surveyor, &c. is now open to a temporary or permanent SITUATION. References for the last ten years. Terms, 2l. per week.—Address, prepaid, A. Z. 13, Belvidere-road, Surrey side of Hungerford-bridge.

TO ARCHITECTS AND BUILDERS.
A GENTLEMAN, of good practical experience, wishes for an ENGAGEMENT in London. Salary no object.—Address, G. A. Office of "The Builder."

TO ARCHITECTS
A YOUNG MAN, having been articled, is desirous of obtaining an ENGAGEMENT in a respectable Office, where further improvement in the profession would be an equivalent to remuneration for services.—Address, W. 12, Vincent-terrace, New River, Islington.

TO BUILDERS AND HOUSE DECORATORS.
A YOUNG MAN, a PAINTER, wishes for a constant SITUATION. He can turn his hand to anything in the graining. Wages, 4s per day.—Address, D. M. Office of "The Builder."

A GENTLEMAN who can SURVEY, LEVEL, and MAP neatly, and is an excellent mechanical and architectural draught man, and who can set hands perspective, or could take photographs, is desirous of a SITUATION (age 29), having finished a five years' engagement. References unexceptionable.—Address, ARMSTRONG, 28, Upper Buckingham-street, Dublin.

TO ARCHITECTS.
A YOUNG MAN, who has had nine years' practical experience, and accustomed to prepare finished and working drawings, bills of quantities, measurement, and superintendence of works, and is well versed in the routine of an architect's office is desirous (as an ENGAGEMENT or ASSISTANT in OFFICE or WORKS. Unexceptionable testimonials and references. Address, R. E. G. &c. &c. care of Mr. Kennett, 14, York-street, Covent-garden, London.

TO ARCHITECTS.
A DRAUGHTSMAN, a Gentleman is desirous of an ENGAGEMENT.—Apply to F. H. Post-office, Reading, Berks.

TO ARCHITECTS, &c.
MENSURATION.—A practical Surveyor of some experience is prepared to give INSTRUCTION to young Architects, who may be desirous of making themselves acquainted with taking out quantities, abstracting, &c.—For terms and part culars apply to Mr. JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

TO ARCHITECTS, CIVIL ENGINEERS, &c.
A SURVEYOR, of considerable practical experience, is desirous of meeting with gentlemen who would be willing to enter into arrangements with him either for measuring off artificers' work, making out specifications, and preparing estimates for projected buildings, railways, or other works of magnitude, surveying and valuing property, &c.—For further information, apply either personally or by letter, to Mr. JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

TO POTTERS AND DRAIN-PIPE MAKERS.
A GOOD HAND in the above line is desirous of obtaining a SITUATION. Can make and enamel wh te closet-pans; is fully competent to undertake the management of a pottery; has had many years' experience in all its branches.—Address, prepaid, D. F. 6, High-street, Vauxhall.

PARTNERSHIP WANTED.—An Architect and Surveyor, who has been in practice about twenty years in a rising town in the south of England, is desirous of taking into the business an active PARTNER.—Address, A. B. Office of Messrs. Joh. Brothers, and Co. Wellington chambers, Cannon-street West, London.

PARTNERSHIP.—WANTED, by a Gentleman of much practical experience and good address, a SITUATION in a land or mineral surveyor's, or agent's office, where there is a prospect of partnership, by purchase or otherwise, as shall be mutually agreeable. References as to character and ability can be obtained of the highest respectability. The advertiser offers his services for three or six months, at a reduced salary, that both may see if any ulterior arrangement be likely to prove beneficial.—Address, Y. W, Post-office, Sheffield.

TO MANUFACTURERS, PATENTEES, AND OTHERS.
THE Advertiser, having extensive warerooms attached to his premises, in an excellent situation, within a few doors of the Strand, would treat with a manufacturer or otherwise as AGENT; would prefer articles attached to the building branch. Highly respectable references given.—Address, post-paid, A. B. C. Office of "The Builder."

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by HANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the Ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 20,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

TO CONTRACTORS, WHARFINGERS, AND LIGHTERMEN
GRAVEL, HOGGEN, SAND, and CHALK of the best quality, to an unlimited extent, may be obtained at a moderate royalty on the river Lee, which communicates direct with the Regent's Canal, without passing into the Thames. For particulars apply to Mr. JOHN GLASS, Enfield Lock, Middlesex.
*** The river Lee rates of tonnage upon the above, 2d. per ton.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, rail way stations, trucks, and carriages made to any plan on the shortest notice.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 6 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

PATENT CHROMATIC GLASS, or GLASS-FACED GROOVED BRICKS.

The attention of Architects, Builders, and others interested, is respectfully requested to the Patent process for the purpose of combining red or other Clay with Glass, by which means durability, entire resistance to moisture, and any colour which the architect or designer may require, are added to the brick

The form of the brick is also, by means of a groove at the side and end, made such as to add greatly to the strength of the building, as the joints by this means are brought nearly close together, so as to form a neat exterior, and the mortar acts as a wedge from the shape of the groove.

The discovery of the use of bricks of a similar kind in ancient Babylon and Nineveh by Mr Layard makes it unnecessary to enter much into a detail of the superior quality of these bricks as their exterior, unimpaired by time, as seen by the specimens in the British Museum, paces it beyond a doubt; and these bricks, though the patent was in progress before the discovery of the ancient bricks, are precisely the same in their materials, and their colour can be varied to the taste of the architect

A sheet of drawings of coloured bricks may be had on application as below, showing the forms most adopted to the process, and that a field is opened to the architect to combine any form and colour, with red clay, that may be most in accordance with his taste, with a cost which will not exceed, if equal, that of common stucco, and less than Portland cement.

Applications for Licenses to work under the Patent may be obtained of the Patentee, T. SUMMERFIELD, Park Glass-works, Birmingham; or at J. S. COCKING'S, Patent Agent, 26, Ann-street Birmingham.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 215, OXFORD-STREET.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner.—Venetian blinds, per square foot, 2d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXELL, Patentee, 95, Regent-street, and at his Steam-works, 145, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 600 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN BURNETT, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c.—JAMES LYNE HANCOCK'S VULCANIZED INDIA-RUBBER TUBING is now manufactured especially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mains of water works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, stop cocks, roses, and jets complete. Vulcanized India-rubber suction-pipes for pumps, any length or size, to order; HOSE for brewers' use, fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass-doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, Levant House, St. Helen's-place, Bishopsgate; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,.....

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground in oil and dry, by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BIGBY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting slops, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-built. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. Piece-manufactures containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not only by the disagreeably appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

WHITE OXIDE of ZINC and ZINC PAINT. (Langston Scott's Patent.)

CROWLEY, WHITE, and CROWLEY, Sole Manufacturers, now supply this numerous substitute for White Lead to shippers and the trade, either in powder or paint, of genuine purity, wholesale under 1 rand, of unrivalled colour and texture, direct from the Works, Grand Surrey Docks, Rotherhithe.

Zinc Paint is below the price of white lead, possesses equal body, and perfectly unchangeable in colour.

Price list and prospectus of its superior properties for interior, exterior, and marine purposes, forwarded in answer to letters addressed to Messrs. CROWLEY, WHITE, and CROWLEY, 10, Lombard-street, London.

A SURE and GUARANTEED REMEDY AGAINST DAMP.—GREENE and CO.'S OXIDE SOLUTION PAINT, for Damp, Salt, and Spotted Walls, price 12s. 6d. gallon. Portland Cement Wash for the fronts of houses, inside of churches, railway stations, and all ordinary colouring, equal to oil paint for durability, in casks of 1 cwt. for 30s. Oxide Paints, of all shades of colour, for in-door and out-door painting, dry in a few hours, and superior to all other paints for durability and preservative properties to wood, iron, or cement.—All ordinary colours 8s. per gallon.—GREENE and CO. Oxide Paint Factory, 23, Norfolk street, Islington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cement). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminently hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement, and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them, for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery, patented by Mr. ASPDIN, much improved the quality of his Cement while at any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as they are aware of numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Alington-street, Western-road; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse, or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works, adjoining near Bridgewater and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, fit for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured by the ordinary methods.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application to them, and can offer favourable terms to large metropolitan and country exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN DAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman Parian under patents, and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN DAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seed-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and is of its state in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN DAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers' sales, and dealers in Plaster of Paris White Paste, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, as in the wharf walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is the best recommendation

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS, STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c., by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERHANGING, is the result of general experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s. 6d. Prepared only by W. J. STENT, Warminster. London Agents—Messrs. J. and G. WALLIS, 64, Long-acre. Agent for Ireland—Mr. S. BOYD, 36, Mary-street, Dublin.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

MAW'S ENCAUSTIC TILE PAVEMENTS A highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO. Manufacturers of THE SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM

in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, esq. in "Official Handbook"), send, free of expense, their pattern and price book.

Benthall Works, Broseley, Salop.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 35s. per 1,000; Floor Bricks and 9-inch Pavings, at 40s. per 1,000; 8-inch Pavings, at 30s. per 1,000; 9-inch Pavings, at 75s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

BRICKS.—From Kent-fields.—Grey stock, shipping, paviors, &c. of superior quality; also, white Suffolk, and red facings.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countine-house, Hoxton Brick-fields, grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand (approved quality) constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Slippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington-butts.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 25s. at WARD'S OLD-ESTABLISHED HOUSE, WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplies with every sort of country Brick and Tile goods; Fire Bricks, Tiles, and Quarries, Interior Marbling and Corroyine perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Pointers' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

TO BRICKMAKERS.

WANTED to PURCHASE, 600,000 BRICKS; half good sound stocks, and the other half good sound place, to be delivered in Holloway within one month. Terms, cash.—Apply by letter to A. Z. Mr. Harris's, Stationer, Holloway-road, stating lowest price and where to be seen.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE LONDON PATENT BRICK COMPANY are now prepared to enter into contracts for the supply of Bricks made by BURSTALL'S PATENT. Apply to JOHN S. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

TO BRICKMAKERS.

THE LONDON PATENT BRICK COMPANY (Burstall's Patent) are now prepared to enter into arrangements for the USE of the MACHINES in the London district. The chief advantages of these machines, which may be seen in full operation at the Company's works, are, the superior quality and economy of manufacture, the bricks (produced from dry clay) are conveyed at once from the machine to the kiln, and are ready for delivery in fourteen days after they are made, thus avoiding all the usual damage, delays, and expensive process of drying, &c.; the machinery and buildings occupy a very small space. Terms and further particulars may be had on application to J. A. DUFF, at the Company's Offices, 8, Old Jewry.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other House in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

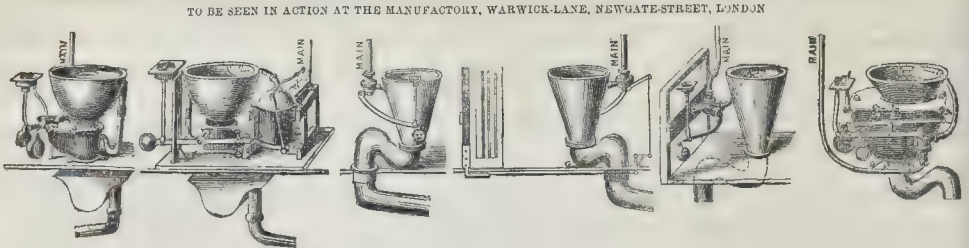
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the chromatic scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.



BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy landing by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney pieces, &c. Slab and Re-faced Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE CLOSET. With Blue Basin, sunk opal handle, 3l. 4s.

No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin sunk opal handle, 3l. 10s

No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 2l. 12s. 6d. With Blue Basin and sunk opal handle, 3l. 3s.

No. 4. J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast-iron trap, 1l. 18s. Enamelled Iron Trap, extra, 4s. 6d

No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelle l Iron Hopper cast-iron trap, and door action, 1l 13s. Extra for Enamelled Iron Trap, 4s. 6d. This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2l. 2s. Enamelled Iron Trap, 4s. 6d. extra.

No. 6.—J. TYLOR AND SONS' PATENT HIGH PRESSURE STOOL-VALVE. This Valve is particularly short in its action. Bunch Valve, with sunk handle, 14s. 6d.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

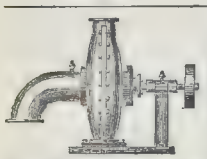
N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.

J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, wellsinking, &c and adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.



Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 36s. per doz. painted
Ditto .... 48s. per doz. galvanized.

Upper Ground street, Blackfriars Bridge, Surrey Side.

BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick-makers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids (hot or cold) raised or forced, will find it greatly to their interest to use GWYNNE and CO'S PATENTED PUMPS For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO, Hydraulic and Mechanical Engineers, Essex Wharf, Essex street, Strand.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, in the

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold miners, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE.—The largest stock in England of single and double pumps, from 4 in. to double 12in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump..... £1 15 0
Patent Pump, with 15 feet of lead pipe attached and bolts and nuts ready for fixing..... 3 0 0
Larger sizes if required.

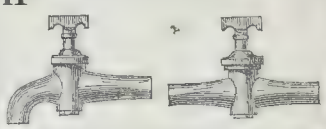
The smaller sizes are also much used for supplying Hot Forcing and Plant Houses, from an underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in Town or Country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.



TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six horse power to twenty-five horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MIDWIN and HALLS, Engineers and Portable Engine Makers, 52, Blackfriars-road. These engines have been successfully employed for years.

LEATHER BANDS for DRIVING MACHINERY EDWARDS PATENT Engineers, Millowners, Printers, and others using bands for driving machinery, are respectfully invited to inspect EDWARDS' IMPROVED FOLDED FLAT SOLID LEATHER BANDS (one pound bands from ¾ inch to 7 inch diameter), which for strength, durability, and steadiness in working, surpass any bands at present in use. Manufactory, 32, Great Sutton-street, Clerkenwell.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 32.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for gable-bouil lings, cottages, asylums, &c

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO SANITARY COMMISSIONERS, SURVEYORS, ARCHITECTS, BRASSFOUNDERS, PLUMBERS, BUILDERS, ENGINEERS, &c.

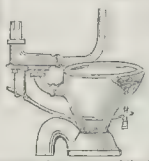
MAYER, BOULTON, and CO. (from S. Lyndon, CORNWALLIS POTTERY, STAPLETON-ROAD, BRISTOL. This is the only Manufactory in the Kingdom for the exclusive production of Pipe, Closet, Sanitary, and Lavatory Basins of all descriptions. M., B. and Co. having purchased the extensive premises, which were formerly used as a pipe factory and foundry, and converted the same into a Staffordshire Pottery on a most extensive scale, are enabled to offer all these articles work, and from their unbounded knowledge of, as well as their long practice in connexion with, this peculiar business, they can manufacture cheaper than any other house. They solicit the especial attention to their Dr Hopper Basin and Trap, at 7s. 6d. each, delivered in any part of the kingdom, and where large quantities are required a liberal discount is allowed. Orders for White Drab, Marbled, Blue Printed, Enamelled, and Gilt wares attended to on the shortest notice

London Depôt—18 Wharf, City-basin.

N.B. On Sale, Two Lathes, a Drilling Machine, a Facing ditto, a Punching ditto, a Bending ditto, a Stove, a large Fan, a pair of Shears; also, a great variety of Patterns and Tools used in the foundry business, and which must be removed before M. B. and Co can complete their alterations.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Lukes, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connell's Registered Model Water-closet." This water-closet is the most simple and efficient yet introduced for high service, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected at the Manufactory, as above.



J. TURNER, Pottery, 2, South Wharf, Praed-street, Paddington.

Ironstone, Cane Ware, Porcelain, White Enamelled Closet Pans and Traps of every shape. These superior articles are unequalled for durability and cheapness. Drawings and list of prices will be sent free on application.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main

Also PATTEN'S improved powerful FLUSHING LOW PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from one and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St. Paul's, London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 3 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

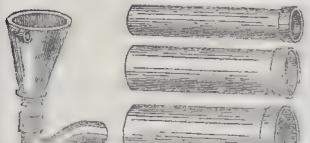
Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGATT, Engineer.

Royal Arsenal, Woolwich, June 24, 1850.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.



I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

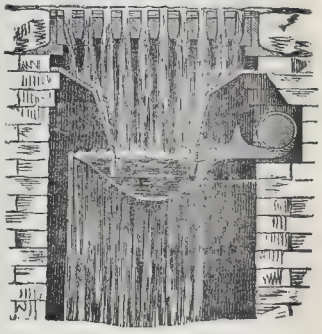
The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

N.B These are made without the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Peake Wharf, King's-road, Camden New Town; J. TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 23, Brydges-street, Covent Garden; and at EDWARD COOK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.



GEORGE JENNINGS,

SANITARY ENGINEER.

A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

THE MANUFACTORY,
29, Great Charlotte-street, Blackfriars-road, London.

BUNNETT and CO.'s PATENT SELF-ACTING EFFLUVIA-TRAP, for Sewers, Drains, and Cesspools, effectually scouring and self-cleansing, cannot get out of order, keeps so, by its

The above is a sectional view of the Trap in its ordinary position, with the rolling weight at the extremity of the lever attached to the moveable pan. The body of the trap, dipping into the moveable pan, forms a perfect vapour-proof joint, and should the trap ever get stopped, the water will rise in the body of it till it overbalances the weight, which then rolls towards the centre, and allows the pan to fall to its fullest extent, instantly discharging all obstructions; the weight then rolls back, and brings up the pan to its former position, catching sufficient water to form a fresh joint.

Five years' extensive use in various parts of the kingdom have thoroughly tested the practical superiority and quality of the above, which has over all others, as proved by a constant repetition of orders, and numerous testimonials from our local boards, town surveyors, and others who have adopted it.

Offices 29, LONGMORE-STREET, LONDON. Works, DEPTFORD, KENT, where particulars, testimonials, &c. may be obtained; also of most respectable Ironmongers.

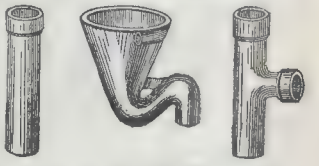
SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many situations of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Risher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Frith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kennington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.



HAYES, BROUGH, and CO.

Works: Llwynenion, near Wrexham.
Offices: 11, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Catalogues had of Hewitt Cubitt, Esq. Architect, 4, Lancaster-place, Strand; and of Pullen and Son, 80, Fore-street, Cripplegate.

TO BLACKLEAD AND EMERY MANUFACTURERS, Colourmen, Druggists, Plant Brokers, and Others.—Extensive Stock-in-Trade and Plant, Clerkenwell.

PULLEN and SON respectfully announce that they are directed to SELL by AUCTION, on the PREMISES, Red-lion-court, Onslow-street, and Saint-yard, Great Saffron-hill, on TUESDAY, OCTOBER 31, at TWELVE, in consequence of the premises being required for the Clerkenwell Improvements, the valuable STOCK-IN-TRADE, PLANT, and UTENSILS, comprising about ten tons of blacklead, in casks; two tons of ditto, packed; three tons of ivory-black, blue-black, and lamp-black; six tons rumbers de marc powder and pipes, three Turkey stone, three tons flint powder and pipes, ten tons dry colours, one ton patent dryer, two tons crucibles, seven manganese, ten wet gum, two tons colour dust, carboys of acid, log wood chips, sponge, two grosses packing pots, twenty grass jars and mustard pots, capital emery-grinding mill, warm pan, and 15-inch iron-bound stone runner, 8 feet diameter, a 4-feet ditto, ten iron beams and planks, and a ton of iron weights, sifting machines, iron of metal pipe, weighing carts, oil caterns, blowing machine, steps and ladders, counters and drawers, iron safe, bottles, casks and brasses, capital wood and iron and all the fixtures and utensils in trade. May be viewed the day prior, and catalogues had of Pullen and Son, 80, Fore-street, Cripplegate.

BUILDING LAND TO BE LET, close to the Regent's-park. There are several plots in this very favourable locality to let for 99 years, at low ground-rents, for third-rate 8-roomed houses, for which there is a great demand in this very genteel neighbourhood. They would, when completed, immediately let or sell.—For particulars, apply to Mr. F. EDGART, No. 9, Harrington-square.

BUILDING LAND TO BE LET, at CARSHALTON, Surrey, near the Station of London and Epsom Railway. Term of lease, 300 years. Low ground-rents, and advances made to the extent of 65 per cent.—Apply to Mr. FRANCIS E. H. FOWLER, Architect, 4, Garden-court, Temple.

SYDENHAM.—TO BE SOLD, or LET on building lease, term ninety years—TWO desirable PLOTS of FREEHOLD GROUND, situated within five minutes' walk of Forest-hill Station, each having a frontage of 100 feet by 190 deep.—Apply to Mr. WM. MORPHEW, Surveyor, Redberry-grove, Sydenham-park.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes. To BE LET, on Building Lease. Money advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

BUILDING LAND to be SOLD or LET, on long building lease, in plots, at EALING, PUTNEY, WOOD-GREEN, near HORNSEY, WARE-ROAD, Hertford, BROCKLEY-HILL, near Forest-hill, ROUND HILL PARK, Brighton, ENFIELD, and CASTLE-HILL, Reading.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

SUTTON, SURREY, five minutes' walk of the Station.—TO BE LET, on a Building Lease for 99 years, an eligible corner plot of FREEHOLD LAND, in the heart of the town, having frontages to High-street of 150 ft. and to Benhill-street of 180 feet, and being well adapted for the erection of shops. For terms apply to Mr. EBBUTT, 21, High-street, Croydon.

CRYSTAL PALACE.—TO BE LET or SOLD, an Estate of about THIRTY ACRES, close to the Crystal Palace. The estate is in the finest site and most healthy position in Norwood for the erection of superior villa residences, with views over the surrounding country for twenty miles.—Apply to Mr. RAYNER, Solicitor, 70, King William-street.

TO BUILDERS AND TIMBER MERCHANTS.

TO BE LET, convenient WHARF PREMISES, situate on the Regent's Canal, in the immediate neighbourhood of the Great Northern Railway goods depôt, and the King's-cross terminus. The premises consist of a portion of the capacious wharf known as Brownhill's wharf, Battle-bridge, having thereon a four-storied building, fitted up with every convenience for a builder or timber merchant. The basement consists of smithy and masons' shops and stores. The ground-floor is fitted up as a saw-mill, and contains a saw-frame, saw-benches, moulding, tenoning, and mortising machines; also, a stone-sawing machine, a traveling crane, and a 20-horse engine, with boiler complete. The first and second floors are used for carpenters' shops stores, and drying rooms. Adjoining this building is the boiler and engine houses, having a chimney-shaft 100 feet high. The premises are to be let, on lease, at an annual rental of 180l. The machinery to be taken at a valuation, but the advertiser will consent to take out the whole amount thereof in timber goods, or works to be done for him by the purchaser. The first portion of Pembroke wharf is divided into two wharfs, each having convenient and capacious premises thereon, excellent living for a large, and are a liberally adapted to the use of any person who is business requires wharf premises.—For further particulars, inquire of Mr. WM. DENNIS, Pembroke-wharf, Caledonian-road, Islington.

SYDENHAM-HILL.—TO BE LET, on a Building Lease, term ninety years, a beautifully-situated PLOT of FREEHOLD GROUND, suitable for one or two villa residences, commanding a most extensive view of the surrounding country, and within an easy walk of the Crystal Palace, and about eight minutes of the Sydenham or Forest-hill railway station.—Apply to Mr. WM. MORPHEW, Surveyor, Redberry-grove, Sydenham-park.

BUILDING GROUND TO BE LET.—
KING'S CROSS, opposite the Station (Houses or Factories).
EALING, near the Railway Station (Villas).
SUTTON, close to the Station (Villas and Inns).
WIMBLEDON PARK, near the new Station (Villas).
VAUXHALL, abutting on the Station and River an extensive Wharf and Warehouses, Freehold, to be Sold.
Apply to NELSON and INNES, Architects, 38, Regent-street.

CANNON-STREET IMPROVEMENT.—BUILDING LEASES.—The Committee for Improvements within the City of London hereby give Notice, that they will meet at GUILDHALL, on MONDAY, the 30th day of OCTOBER next, at ONE o'clock in the afternoon precisely, to receive TENDERS, in writing, agreeably to a form to be obtained at the Office of the City Architect, from parties willing to take BUILDING LEASES of SUNDRY LOTS of GROUND, on the south side of Cannon-street West, and on the west side of Old Change. Plans can be inspected, and conditions seen, upon application at the Architect's Office, Guildhall, on any day (Sundays excepted), between the hours of ELEVEN and THREE.
Guildhall, Sept. 1854. MEREWETHER.

ARTHUR CATES, } Hon. Secs.
T. W. GOODMAN, }
1 Lyon's Inn Hall, Strand.

Office of Metropolitan Buildings, 6, Adelphi terrace, Strand, October 2, 1854.

METROPOLITAN BUILDINGS' ACT. NOTICE is hereby given, that any person desiring to obtain a CERTIFICATE of QUALIFICATION for the Office of DISTRICT SURVEYOR, will take place on MONDAY, the 6th day of NOVEMBER next. Each Candidate is to be examined, must apply on or before the 28th instant, and the application must be accompanied by a preliminary statement, according to the Course of Examination prescribed in the Rules for that purpose, copies of which may be had at this Office.
ARTHUR SYMONDS,
Registrar of Metropolitan Buildings.

NOTICE is hereby given, that a GENERAL QUARTERLY MEETING of MEMBERS of the INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS will take place on WEDNESDAY EVENING next, at the RAY-TREE TAVERN, St. Swithin's-lane, for the purpose of electing officers, and other general business.
W. ALLARD, Secretary.

COMPETITIONS.

TO ARCHITECTS.
THE Committee of the Sheffield School of Art, having about to ERECT a NEW SCHOOL, have determined on offering the building of it to competitors, and hereby invite architects to send in plans, elevations, and sections complete. All designs are required to be on the same scale, namely, one-eighth of an inch to a foot, and must be sent in on or before the 9th of DECEMBER next, addressed to the Honorary Secretary of the School of Art, Sheffield. Competitors are requested to put a distinguishing mark or motto on their designs, but not to attach their names. The letters accompanying the plans to contain the names of the competitors, but the letters of the successful competitors only will be opened. The architect who shall produce the most suitable design will have the erection of the building, and the second best design will receive a premium of fifty pounds. No plans will be received in competition which cannot be carried out for a sum not exceeding 4,000*l.*—For plans of the grounds, and particulars of requirements, apply to the Honorary Secretary, Sheffield; or at the Office of "The Builder."
By order of the Committee,
BENJAMIN WIGHTMAN, Honorary Secretary,
Sheffield School of Art.

TO ARCHITECTS
THE COMMITTEE of the SHEFFIELD SCHOOL of ART being about to ERECT a NEW SCHOOL, have determined on offering the Building of it to COMPETITORS, and hereby invite architects to send in plans, elevations, and sections complete. All designs are required to be on the same scale, namely, one-eighth of an inch to a foot, and must be sent in on or before the 9th of DECEMBER next, addressed to the Honorary Secretary of the School of Art, Sheffield. Competitors are requested to put a distinguishing mark or motto on their designs, but not to attach their names. The letters accompanying the plans to contain the names of the competitors, but the letters of the successful competitors only will be opened. The architect who shall produce the most suitable design will have the erection of the building, and the second best design will receive a Premium of Fifty Pounds. No plans will be received in competition which cannot be carried out for a sum not exceeding Four Thousand Pounds. For plans of the ground, and particulars of requirements, apply to the Honorary Secretary, Sheffield; or at the Office of "The Builder," Yorkstreet, Covent-garden, London.
By order of the Committee,
BENJAMIN WIGHTMAN, Honorary Secretary,
Sheffield School of Art.

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS.
DONCASTER CEMETERY.—The COMMISSIONERS are desirous of receiving DESIGNS, GROUND PLANS, ELEVATIONS, and detailed ESTIMATES, for the LAYING OUT as a CEMETERY, or RURAL GROUND the land selected for the site, containing about seven acres and a half, and for erecting thereon Two Chapels, apart from each other, with Lodge and Entrance Gates. The whole cost not to exceed 1,600*l.* The plan and levels of the ground may be inspected at Mr. ALEXANDER'S Office, in St. George-gate; and a premium of 12 will be awarded for the design which may be approved. The designs and estimates with motto are to be addressed "To the Commissioners of the Doncaster Cemetery," under cover, to their Clerk, on or before the 11th day of NOVEMBER, 1854.
T. B. MASON, Clerk to the Commissioners.
St. George-gate, Doncaster, Oct. 12, 1854.

CONTRACTS.

TO CONTRACTORS.
Royal Engineer Office, Chatham, 5th Oct. 1854
NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall Mall, London, on or before THURSDAY, the 26th day of OCTOBER, 1854, from persons desirous of CONTRACTING with the Honourable Board of Ordnance for BORING for a better supply of WATER, in the ordnance well, at Sheerness. Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Sheerness, between the hours of TEN and FOUR, till the 25th of OCTOBER, 1854, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and severately to be bound under a penalty of 200*l.* for the due performance of the Contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall Mall, London, and to be delivered free, endorsed "Tender for Works at Sheerness," No Tender can be admitted after the said 26th day of OCTOBER, 1854. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

TO CONTRACTORS
Royal Engineer Office, Chatham, 5th October, 1854
NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before THURSDAY, the 26th day of OCTOBER, 1854, from persons desirous of contracting with the Honourable Board of Ordnance for BORING and SINKING a WELL for WATER, in the Royal Engineer Field Work Depôt, St. Mary's-creek, near Chatham. Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 25th of OCTOBER, 1854, Sundays excepted. The person whose Tender may be accepted to enter into a bond, with two eligible securities, jointly and severally to be bound under a penalty of 1,000*l.* for the due performance of the contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham." No Tender can be admitted after the said 26th day of OCTOBER, 1854. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

CONTRACTS.

COVENTRY LOCAL BOARD of HEALTH To SEWER CONTRACTORS and others. Persons desirous of CONTRACTING for the CONSTRUCTION of about 11,149 YARDS of BRICK SEWERS, and 2,502 YARDS of PIPE BRANCH SEWERS in connection therewith according to the plans and specification in which may, together with the form of Tender, be seen at the Office of Mr. ROBINSON, C.E. Bank Chambers, High-street, Coventry, between the hours of ELEVEN o'clock a.m. and ONE o'clock p.m. of each day, until MONDAY, the 23rd of OCTOBER next, are requested to send sealed Tenders, endorsed "Tender for Sewers," to the Town Clerk's Office, Little Park-street, Coventry, at or before TEN o'clock in the forenoon of the above-mentioned day. The Local Board will require the whole of the works to be completed on or before the 1st day of JULY, 1856, in such order and at such times as they may direct; and they do not bind themselves to accept the lowest or any Tender. By order of the Local Board of Health.
THOMAS BALL TROUGHTON, Town Clerk.
Coventry, September 15, 1854.

TO IRONFOUNDERS, EARTHENWARE-PIPE MANUFACTURERS, AND OTHERS.
CLITHEROE WATERWORKS COMPANY The Directors hereby give notice, that they are prepared to receive TENDERS from Competent persons who may be willing to undertake all or any of the following Contracts:—
CONTRACT No 1.—For the Manufacture and Supply of about 11,000 Yards of Cast-iron Socket Pipes, varying from 9 inches to 2 inches internal diameter.
CONTRACT No 2—For the Manufacture and Supply of about 3,000 Yards of Stoneware or other Earthenware pipes, of from 4 inches to 2 inches internal diameter.
CONTRACT No. 3.—For the Manufacture and Supply of certain Sluice Valves, of Stop-cocks, and Hydrants or Fire-plugs, &c.
Drawings and specifications may be seen at our Offices, on and after the 16th of OCTOBER inst.; also at the Office of Mr. J. McLANDSBOROUGH, Civil Engineer, 24, Queen's gate, Bradford, from which forms of Tenders, and any further information may be obtained. Tenders must be sent to the undersigned, under cover, addressed "To the Chairman of the Clitheroe Waterworks Company," endorsed "Tender for Contract No. 1, 2, or 3," as the case may be, on or before the 30th day of NOVEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.—By order,
THAPPES and EASTHAM,
Clitheroe, 4th Oct. 1854. Solicitors.

BERWICK-UPON-TWEED LOCAL BOARD of HEALTH.—WATERWORKS.—CONTRACTS A, B, C, D and E. To IRON FOUNDERS, BRASS FOUNDERS, PIPE LAYERS, CONTRACTORS, EXCAVATORS, and others. The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to undertake either of the following CONTRACTS:—
CONTRACT A.—For the supply of about 200 tons of CAST-IRON WATER-PIPES and other CASTINGS.
CONTRACT B.—For the supply of SLUICE-VALVES, HYDRANTS, and STREET-FITTINGS.
CONTRACT C.—For the construction of a COVERED SERVICE RESERVOIR.
CONTRACT D.—For EARTHWORK, PUDDLING, &c. in Embankment for Storage Reservoir.
CONTRACT E.—For EXCAVATING the GROUND, LAYING and JOINTING EARTHENWARE WATER-PIPES, and for the construction of SETTLING-WELLS, VENTILATING-SHAFTS, and other works.
The drawings and specifications may be seen, and any further information may be obtained, on application at the Office of the Local Board of Health, Berwick-upon-Tweed; or at the Offices of ROBERT RAWLINSON, C.E. 14, Parliament-street, Westminster. The specifications, schedules, bills of quantities, and forms of Tender (in duplicate) for Contract A or B may be had on payment of five shillings. Sealed Tenders to be delivered at the Office of the Local Board, Berwick-upon-Tweed, by TWELVE o'clock on FRIDAY, the 20th day of OCTOBER instant, endorsed "Tender for Contract A, B, C, D, or E," as the case may be. The Local Board do not bind themselves to accept the lowest or any Tender.
JAMES C. WEDDELL, Clerk to the Local Board.
Berwick-upon-Tweed, 8th October, 1854.

MIDLAND RAILWAY.—The Directors of the Midland Railway are prepared to receive TENDERS for the ERECTION of an ENGINE-HOUSE, FITTING-SHOPS, and other Buildings in connection therewith, at the BURTON-UPON-TRENT STATION. The drawings and specification may be seen, and quantities obtained, upon application at the Engineer's Office, Derby Station, from the 16th to the 23rd instant, and at the Engineer's Offices, Lansdowne-street Station, Birmingham, from the 24th to the 27th instant inclusive. Tenders to be forwarded to the Secretary, to the Way and Works Committee, Derby Station, not later than TEN a.m. on TUESDAY, the 31st instant. The Directors do not bind themselves to accept the lowest or any Tender.
By order, JOSEPH SANDELS, Secretary.
Derby, October 10, 1854.

TO BUILDERS AND OTHERS
PERSONS desirous of sending in TENDERS for the WORKS required in the ENLARGEMENT and RESTORATION of the CHURCH of ST. MARY, at ILKESTON, in the county of Derby, are to take notice that Builders' Plans, Specifications, and Forms of Tender may be had of the Architect on application, either personally or by letter, on and after WEDNESDAY, the 20th inst., by post Seal Tenders to be delivered to the Rev. RALPH NICHOLSWORTH, Vicar, on or before WEDNESDAY, OCTOBER 18th, 1854.

[For remainder of Contracts see next page.

GARSTON, near LIVERPOOL.—PUBLIC HEALTH ACT, 1848.—CIVIL ENGINEERS and SURVEYORS.—The Local Board of Health for the District of Garston are desirous to receive PROPOSALS for a SURVEY and PLANS of the intended Sewerage, to be carried into effect by the General Board of Health, subject to the approval of the Local Board; the sewers, &c., plans will have to be executed. The district to be surveyed for the present purposes comprises about two hundred acres, of the town contains about three hundred houses. Gas-lamps, of which there are twenty-seven, will be liable to be removed. Candidates must be competent to give satisfactory experience in the construction of sewers and draining works and to report to the Board, at the London Local Board of Health, on the 20th of October next. The Local Board have resolved themselves to accept the lowest or any Tender. Further particulars may be obtained on application at the Surveyor's office, No. 6, Chancellor's-buildings, Garston, between the hours of Ten and Four, where the form of the proposed contract may be seen on and after the 25th instant. Sealed Tenders, endorsed "Garston Sewerage," are to be addressed to the Secretary, at the Local Board Office, and delivered there on or before Monday, the 2nd day of October next.

By order,
J. W. DANBY, Secretary.

Lincoln, October 10, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a VILLA RESIDENCE, at May Bank, between Newcastle-under-Lyme and Wolstanton, Staffordshire, for James Phillips, Esq., may see the plans and specifications at our Offices at Hanley, and obtain any information from MONDAY, the 16th inst., until WEDNESDAY, the 25th day of NOVEMBER next, when the Tenders must be sent to the person named in the advertisement. The Committee do not necessarily accept the lowest or any other Tender.

WARD and SON, Architects.

Hanley, Staffordshire Potteries, October 6, 1854.

N.B. The buildings will be of stone from the Peck Bank Quarry, near Newcastle.

TO BUILDERS.

METROPOLITAN COMMISSION of SEWERS. TO BUILDERS, CONTRACTORS, and others.—The Metropolitan Commissioners of Sewers will be prepared to receive SEALED TENDERS, on TUESDAY, the 24th day of OCTOBER next, at the Office of the Commissioners, No. 1, Spring-gardens, Charing-cross, between the hours of Ten and Four o'clock, for the following WORKS, viz.:—

For the CONSTRUCTION, RENEWAL, and COMPLETING of SEWERS, and PIPE SEWERS, between Hyde-park and the Thames, and between Chelsea and Battersea-bridge, and for the Construction of Reservoirs for the Metropolitan Commissioners of Sewers, at Battersea-fields, and for the Construction of Culverts for the Metropolitan Commissioners of Sewers, between Battersea-fields and Battersea-bridge.

Plans, Sections, and Specifications of the Works, and Forms of Tender, may be seen at the Office of the Commissioners, on and after MONDAY, the 16th day of OCTOBER next, between the hours of Ten and Four o'clock.

No Tender will be received after the day and hour above mentioned.

By order of the Commissioners,
J. H. WOOLLAYH, Secretary.

NOTICE to BUILDERS and CONTRACTORS.—The Trustees and Governors of the Whitehaven Union, in the County of Cumberland, hereby give Notice, that they are desirous of receiving TENDERS for the ENLARGEMENT, ALTERATION, and IMPROVEMENT of the Workhouse, and for the Erection of Additional Buildings thereto, according to Plans and Specifications prepared by Mr. JOHN WEBSTER, Architect, Whitehaven, which may be seen at the Workhouse, on and after the 16th day of October instant. Sealed Tenders, addressed to the Clerk to the Guardians, at the Workhouse, Whitehaven, and endorsed "Tender for Workhouse Alterations," must be delivered at the Workhouse, on or before the 30th day of October instant, at Twelve o'clock at noon. The Trustees and Governors do not bind themselves to accept the lowest or any Tender.

By order,
JOHN HODGSON, Clerk.

Whitehaven, October 10, 1854.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of TENDERING for the CARCASING of a PAIR of VILLA RESIDENCES, near the terminus of the North London Railway, at Chalk-farm may see the plans and specifications at the office of Mr. R. H. SHORE, 1, Queen's-terrace, Regent's-park. Tenders to be sent in, on the 20th inst. and the lowest will not necessarily be accepted.

TO CONTRACTORS.

SOUTH-EASTERN RAILWAY. — READING EXTENSION.—The Directors of the South-Eastern Railway Company are prepared to receive TENDERS for the EXECUTION of the WORKS necessary for the formation of a short branch of railway to connect the Reading Station of the South Eastern Company with the Reading Station of the Great Western Company. Plans, specifications, and conditions can be seen, and forms of Tender obtained, on the 17th inst., at the London terminus, and after the 18th instant. Sealed Tenders, endorsed "Reading Extension," are to be addressed to the Secretary, at the South Eastern Railway, and delivered there on or before the 1st of NOVEMBER next. No Tender will be accepted unless it is sent in upon the printed form provided by the Company. The Directors do not bind themselves to accept the lowest or any Tender.

G. S. HERBERT, Secy.

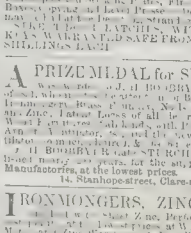
London Terminus, October 6, 1854.

TO PAVIORS.

ST. PAUL'S, DEPTFORD, 7th October, 1854.—Notice is hereby given that the Officers of this Parish will meet at the ROYAL OAK INN, High-street, Deptford, on TUESDAY, the 17th day of NOVEMBER next, at SEVEN o'clock in the Evening precisely to CONTRACT for FOOTWAY-CURBING, &c. The specification for the work and Form of Tender may be seen any day after the 23rd inst. between the hours of TEN and TWO, at the Vestry Clerk's Office in High-street aforesaid, where the Tenders must be delivered, sealed up, before the hour of meeting. The Parish Officers do not bind themselves to accept the lowest Tender.

By order,
T. MARCHANT, Vestry Clerk.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action, for the years at the above Building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cocks and Tubing, Brass Founders, &c., supplied. DEFRIES'S PATENT DRY GAS METERS upwards of 40 in use.—See testimonials at the Office, 165, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.



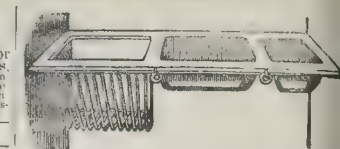
TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, &c., is obtained by the DUPLEX PATENT CALORIFERE, extracting in twenty-four hours absolutely all the water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, with or without any power. Small room required, no repair necessary for many years. A great deal of fuel, large stores, &c., saved. Invented by and for DEFRIES, erected by the first engineers of the age. It is in operation at Wood-paving Company's Works, Peckham; at Mr. Mackenzie's, Architect of Victoria-street, Westminster; at Messrs. Grissell and Raymond's, Bankside; and several maltsters, millers, and manufacturers in London and country. Apply to DEFRIES and SONS, Engineers for Inland Water Mills, Turbines, &c., 65, King William-street, City.

HOT WATER APPARATUS, adapted for Hothouses and every other description of Buildings. Improved Boilers, requiring no brickwork; WARM AIR Apparatus, &c.—THOMAS WILLIAMS, Inventor and Patentee.

HEATING by HOT WATER.—J. JONES, Engineer, Manufacturer, and Patentee of CONICAL and SADDLE BOILERS, which have been proved by experience to be the most powerful, durable, and economical yet introduced. Also improved forms of Pipes and Joints for the same, Hot water pipes, elbows, syphons, throttle-valves, stop-cocks, flange and screw elbows, valves, fixings, &c. Prospectuses and testimonials forwarded on application to J. JONES, Iron Bridge Wharf No. 6, Barkside, Lisbon, near the Southwark-iron bridge.

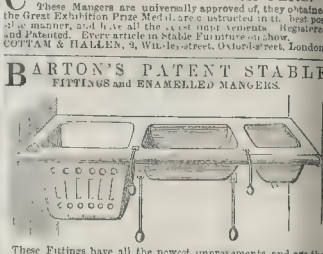
WARMING by HOT WATER.—J. WEEKS and CO.'S KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their extensive premises for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to their improved system, as fully explained in the "Builder" of June 10, 1854, and to the testimonial of the Rev. H. J. Bigge's, delivered on the 12th inst., of the success of which Mr. Bigge says, "that he has not seen the like with coal, and that he will be the last to change his system, which is capable to warm immediately, in other cases by night, as soon as it is at work."



buildings. It is free from all objections, such as imperfect ventilation with a uniform comfortable temperature, &c. Public institutions, Messrs. JOHN WEEKS and Co. guarantee their Hot Water Apparatus for many years.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS which CANNOT BE PICKED.—The Locks are now introduced to the public for their simplicity, and their unequalled security, by the Patentees, Parnell Nos. 1 and 2, Defiance Nos. 1 and 2, Parnell Safe, Iron and Cash Boxes, opening Level Pressure, the cheapest and best Locks now in use. Illustrated Price Lists sent free.

NOTICE.—Locks of TWO SMALL NEAT KEYS WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.



A PRIZE MEDAL for SUPERIOR LOCKS.—Messrs. JOHN BRAMAH and PRESTAGE, Patentees of the Improved Hydraulic Press, Engineers, Brass Founders, Bell Hangers, and Smiths, Inventors and Manufacturers of all descriptions of Locks, Latches, Bolts, Safes, Iron Doors, Shutters, Gates, Palisading, Wrought-iron Railings, Fenders, Stoves, Grates, Kitchen Ranges, Culinary Apparatus, Pumps, Cocks, Valves, Water-closets, Lifts, Hydraulic Presses, Machinery, and every description of Smith's Work, 124, Piccadilly, corner of Dover-street.

GEORGE and SAMUEL CUTLER, Manufacturers of Iron Bedsteads, Wire Work, Fenders, Fire-irons, Stoves, Ranges, Kitchen Furniture, Culinary Utensils, Japanned Goods, Tin Plates, Sheet Iron, Zinc, Copper, Brass, and Iron Wares, Nos. 4 and 5, Leadenhall-street, City, and 76, Strand, London.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the most important requisites. Registered and Patented. Every article in Stable Furniture on show.—COTTAM & HALLEN, 9, Wilton-street, Oxford-street, London.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented manufacture of this description to be had. Plain Enamelled, and Galvanised. All kinds of Stable Furniture kept in stock.—Oxford-street Bazaar, Regent-st., &c.

Manufacturer of KITES' Patent Chimney-top Smoke-curing Chimney Cans, 160 of this principle on Buckingham Palace. Price 35s. each.—JAMES BARTON, Iron Founder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or galvanised.

Castings Warehouse, 81, Upper Thames-street.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at EDWARDS and SONS', 12, Ryder's-court, Oxford-street. By this grate a smoky chimney is rendered no chimney sweeping is required, and a saving of at least five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

THE ONLY STOVE WITHOUT a FLUE.—JOYCE'S PATENT—Plain, from 12s. to 28s.; Ornamental from 35s. to 5l. to 5 guineas for warming halls, passages, greenhouses, watercloset-halls, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the Show Rooms of S. NASH, Ironmonger, &c. 240, Oxford-street, and at the City Depôt, 3, Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat irons with perfect cleanliness, for twelve hours, with one penny-worth of coals.—Price 16s. Packed 18s.

*** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and exhibited by him at the Society of Arts, on WEDNESDAY, MAY 10, in its perfect combustion, consumes fuel, requires much less attention than the ordinary stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation. Manufactured by D. and E. BAILEY, 272, High-holborn.

SMOKELESS DOMESTIC FIRE-PLACES.—RAWLS'S PATENT STOVE is a novel and successful improvement in domestic fire-places. It combines a cheerful open fire and extensive appearance of the best register, with complete prevention of smoke. The existing fire-places need no alteration. Further information may be obtained at 13, Arlington-terrace, Haverstock-hill, Hampstead, where the stove may be seen in use any day from Four to Eight p.m. Licences will be granted.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co., having obtained the unanimous approval of practical men, is now further recommended as the best fencing for park and farm purposes, for divisions, for temporary agricultural purposes, instead of any kind of hurdles, for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability not to be found in combination in any other fence before introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Queen's Hunting-park, at Windsor, has the important property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
6, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

COLLINGE'S PATENT HINGES.—Sole Manufactory, CHARLES COLLINGE and Co.'s Hinge Works, Lambeth, where a great variety are always on show for doors, gates, casements, cupboards, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and sweeping spring hinges, and superior cast fastenings, at moderate prices. Sole agents for the unique marble Charles Colinge, cabinet, lamp, &c. brass and ornamental cast and wrought iron-work, for home and other purposes. Engines, machinery, patent axletrees, and carriage-springs.

IRON ROOFS, BRIDGES, HOUSES, and CAST-IRON WORK, of every description, supplied and fixed by JOHN WALKER, Mill-wall, Poplar, and offices, Arthur-street West, London-bridge, late 31, Gracechurch-street.

N.B. Builders and others may ensure their orders for castings and wrought-iron work carefully and punctually attended to.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanized Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time, without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford, St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc: it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18	oz.	per foot	super.
No. 13 " "	23	oz.	do.	do.
No. 14 " "	26	oz.	do.	do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE—Messrs. Rylands and Sons' Books, Papers, and Bank notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.
COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL

"28, High-street, Manchester, March 6th, 1854.

"Messrs Chubb and Son.

"GENTLEMEN,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 13 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (except the iron) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

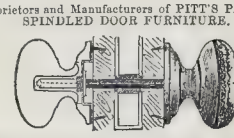
"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its applicati n has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.



The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

HART and SON,
Proprietors and Manufacturers of PITT'S PATENT SPINDLED DOOR FURNITURE.

PULPIT LIGHTS, GAS-BRACKETS, SCONCES, &c.

HINGES, HANDLES, LOCKS, BOLTS, &c.

Also a self-acting SLIDE LATHE, bed, 15 feet long, with sliding gap, to inches, centres, screw, cutting, gear, &c. complete.—Apply to Mr MACKENZIE, 9A, Murray-street, New North-road, Hoxton.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

sing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

MOORE'S PATENT LEVER VENTILATOR and PATENT RESPIHATOR, Sekford Works, St. James's-walk, Clerkenwell, London, and the Furniture Court, Crystal Palace, Sydenham.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 295, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Bartley's Patent Roofing Tiles from 10s. per dozen.

Sashes Primed and Glazed with good Crown Glass from 3½d. per foot.

Strong Sheet Glass packed in boxes of 100 feet, from 12s. per box.

The new Ruby Sheet, the best for embossing, from 1s. 3d. per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

PATENT CHROMATIC GLASS, or GLASS-FACED GROOVED BRICKS.

The attention of Architects, Builders, and others interested, is respectfully requested to the Patent process for the purpose of combining red or other Clay with Glass, by which means durability, entire resistance to moisture, and any colour which the architect or designer may require, are added to the brick

The form of the brick is also, by means of a groove at the side and end, made such as to add greatly to the strength of the building, as the joints by this means are brought nearly close together, so as to form a neat exterior, and the mortar acts as a wedge from the shape of the groove.

The discovery of the use of bricks of a similar kind in ancient Babylon and Nineveh by Mr. Layard makes it unnecessary to enter much into a detail of the superior quality of these bricks, as their existence, unimpaired by time, as seen by the specimens in the British Museum, places it beyond a doubt; and these bricks, though the patent was in progress before the discovery of the ancient bricks, are precisely the same in their materials, and their colour can be varied to the taste of the architect.

A sheet of drawings of coloured bricks may be had on application as below, showing the forms most adapted to the process; and that a field is opened to the architect to combine any form and colour, with red clay that may be most in accordance with his taste, with a cost which will not exceed, if equal, that of common stucco and less than Portland cement.

Applications for Licenses to work under the Patent may be obtained of the Patentee, T. SUMMERFIELD, Park Glass-works, Birmingham; or at J. S. COCKING'S, Patent Agent, 26, Ann-street Birmingham.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr JOHN SHORTON'S, Crispin-street, Spitalfields, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom making Italian Marble the produce of his own quarries, begs to inform the public he is connected with the Marble Trade that he has established, in London, the most extensive Depot of Statuary, Veined Sienian, Dove, and Black and Gold Marbles at CARRARA WHARF, THAMES BANK, PIMLICO, a few of Vauxhall Bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 7, Cleveland-street, Fitzroy-square, to more extensive premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade as lately on his own account. Mr. Thompson having no longer his agent.

Mr. J. Fabbricotti begs to say that he is the sole proprietor of four lime as usual, as, being the absolute proprietor of the quarries at Carrara he can supply at better acceptance and quality than any other.

N.B. The well-known qualities of Mr. Fabbricotti's marble are colored and veined by Nature in England and America.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Slate Merchants, Contractors and Builders' Agents, beg to inform the public and the trade in general that their stock of marble remains as last from the principal quarries, and is now on the Premises, FOR SALE or COMMISSION ONLY, and that consequently an application to the trade will find it MORE REASONABLE than LAST PRICES.

Just arrived per Roberts Thom Sutte, Notabe and Hawkshaw, 20 blocks of Statuary and Veined Marbles, Monuments, Vases, &c. Yorkshire and Portland Stone. Purbeck Paving, Forest Stone in assortment. The Marble Wharf, Thames-bank, Pimlico, near Vauxhall Bridge.

TO ARCHITECTS MASONS AND BUILDERS

MESSRS. BRINE (BROTHERS) beg to inform all consumers of Marble, that they have entered into contract with Count LAZZONI and SONS, of Carrara, for the IMPORTATION of their QUARRIES, which are known to be the finest in Italy, and the first two cargoes, consisting of Statuary Veined, Dove, &c., are now landing, at their Depot, Great Northern Wharf, Canal-road, King's-cross, where also may be found marble slabs of every description, sawn by their powerful machinery.

H. W. WILKINS, Manager.

65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY are to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary. Whitehall Wharf, Cannon-row, Westminster.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts. Box Ground Stone, Scallett Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

CAEN and AUBIGNY STONE.—GATES and GEORGE, late Leard, Bedham, & Co., General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also to vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in blocks and ashlar of specified dimensions and fine scappled; also random and coarse rubble. It is easily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.

MONUMENTS! MONUMENTS!—For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

TO CEMENT MANUFACTURERS AND OTHERS.

A QUANTITY of PORTLAND-STONE CHIPPINGS to BE DISPOSED OF.—Apply to Mr. CLARKE, 7, Cannon-street, City.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall

London Agents TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—A. J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster Bridge.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prisons, Penitentiaries, and other Pentonville; Millbank Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stables at Brighton, Perigmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tolly-street, and at Messrs Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made parties are recommended to supply themselves from the Manufactory, 6 and 16, Upper Belgrave place, Pimlico Patronised by Her Majesty, Prince Albert, the Royal Family, Architects, Engineers, and honoured with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition.

SLATE QUARRY.—A private Gentleman having a property containing Slate Veins of the first quality of Rock on the great Bangor Range, of an aggregate thickness of 200 yards, wishes to meet with gentlemen who can provide capital either by Public Company or otherwise for working the same.—Address, G. G. Office of "The Builder."

TO CARMEN AND OTHERS.

THE Advertiser requires a Quantity of Gravel CARTED from NEASDEN to WALM-LANE, Willesden, near Edgware-road, a distance of about two and a half miles. Any party willing to contract for such gravel, at per load, may hear full particulars by applying to Mr G. CLARKSON, Surveyor to the Parish of Willesden.

KENNARD, BROTHERS, Grey Stone and Chalk Lime Depôt, Swan place, back of the Swan, Old-road

	£	s.	d.	
Grey Stone Lime, of superior quality	8	0		per yard.
Ditto, delivered 5 miles	10	0		"
Ditto ditto 4 miles	11	0		"
Chalk Lime	8	0		"
Ditto delivered 1 mile	9	0		"
Ditto ditto 5 miles	10	0		"
White Lime for Roman Stucco	0	0		"

Whole trucks on the Eastern and Eastern Railways daily.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Building materials of every description, a mile west of London, and 11 miles by water from Westminster Bridge, with every convenience for supplying builders, either in large or small cargoes. Portland, Caen, Bath, and Yorkshire Stock Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, Slate Slab and Box Slabs from the Pearlyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is to be let or sold. Margent's estate.

W. AND R. CHAMBERS'S NEW AND REVISED EDITIONS OF STANDARD WORKS.

I.

Re-issue, commencing on the 4th November next.

No. I. price 6d; also, Part I price 2s. of the

PICTORIAL HISTORY of ENGLAND. Illustrated by upwards of Sixteen Hundred Woodcuts. Carried down to the present period. The work will be reissued in this or pixel form, and with all its original illustrations forming Eight Volumes, and terminating with the year 1815. To this series will be added a new edition of the HISTORY OF THE PEACE, and an account of the recent events, under the care of Messrs. Chambers, printed uniformly with the above, and including a COMPLETE CHRONOLOGICAL INDEX. Thus, the entire work will be A PICTORIAL HISTORY OF ENGLAND TO THE PRESENT PERIOD. In ten volumes; carefully printed, on good paper, and forming the most complete and highly illustrated work of the kind ever published.

The Number, consisting of thirty-two pages super-royal 8vo, price 6d. in a coloured wrapper, will appear every Saturday; and a Part (128 pages), price 2s. every month with the magazines. The work will comprise about sixty parts. The first Number and first Part will be issued on the first Saturday in November.

II.

No. I. price 6d. and Part I. price 2s. of a Re-issue of the

PICTORIAL BIBLE. Being the Old and New Testaments, according to the authorized version, splendidly illustrated with Steel Engravings, Woodcuts, and Maps, with numerous Notes by JOHN KITTO, D.D. F.S.A.

The New Issue will be more handsomely printed than any of the preceding editions; and a Number, consisting of thirty-two pages super-royal 8vo, in a coloured Wrapper, will appear every Saturday, price 6d.; and a Part, price 2s. every Month. The work will be completed in about Eighty Six Numbers, or Twenty two Parts. The First Number and First Part will be issued on the First Saturday in November.

III.

Also, on the 2nd December, 1854, No. I. price 6d. and Part I. price 2s. of a Re-issue of the

PENNY CYCLOPÆDIA.—Illustrated with many Thousands of Wood Engravings

Original Work edited by GEORGE LONG, A.M.

Revised, with all the needful Corrections and Additions, New Facts, and Events, under the care of Messrs. CHAMBERS.

Printed in a superior style, the work, comprising upwards of 14,200 pages, exclusive of a Supplementary Volume, will be presented at a price not exceeding 8l. 18s.

From the smallness of the cost and the method of publication, in Numbers and Parts, this New Issue of the PENNY CYCLOPÆDIA will be eminently suitable for Country and Parish Libraries, Mechanics' Institutes, Literary Institutions, &c. requiring a standard work for consultation.

A number, consisting of 40 pages of imperial 8vo, price 6d. in a coloured wrapper, will be issued every Saturday; and a Part (160 pages), price 2s. every month. Half Volumes and Volumes will also be issued as the revision advances, at accelerated intervals, so that purchasers may desire it, more readily to complete the work. The First Number and First Part will be issued on the first Saturday in December.

W. and R. CHAMBERS, London and Edinburgh; H. CAMPBELL, Glasgow; J. M'GLASHAN, Dublin; D. S. FRANCIS and CO. New York; LIPPINCOTT, GRAMBO, and Co. Philadelphia; HUGH RANSAY, Montreal; and all Booksellers.

TO ENGINEERS, ARCHITECTS, CONTRACTORS, AND SURVEYORS

ALEXANDER'S TABLES; intended to facilitate the setting out of curves of railways, roads, ribs of centres for arching, &c.; containing the offsets for tangents and chords of curves from 1 chain radius up to 100 chains, with the angles formed by tangents of various lengths, being an expeditious and certain method of ranging curves, just published, price 8s. and may be had of the author, J. LYON ALEXANDER, Engineering surveyor, 7, Castle-street, Holborn.

A new Edition, in 8vo, price 10s. 6d.

HISTORY of the IRON TRADE, from the Earliest records to the Present Period.

By HARRY SCRIVENOR, Liverpool, Author of "The Railways of the United Kingdom Statistically Considered."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcp 8vo. with woodcuts, price 7s. 6d. cloth,

PROFESSOR BRANDE'S LECTURES on the ARTS connected with ORGANIC CHEMISTRY, as applied to MANUFACTURES, including Dyeing, Bleaching, Calico-printing, Soap, Candles, &c. the Preservation of Wood, Tanning, &c. delivered before the Members of the Royal Institution.

Arranged by permission from the Lecturer's Notes by J. SCOFFERN, M.B.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

HOW LONG is LONDON to be VICTIMISED by its SEWAGE?

EFFINGHAM WILSON, Royal Exchange,

EDWARD STANFORD, Charing-cross.

Price 6d.; per post, 8d.

Just published, price 1s. issued to Schools by the Board of Trade Department of Science and Art, No. I. of

OBJECTS in ART MANUFACTURE and Use; by CHARLES TOMLINSON.

No. I.—PAPER WITH SPECIMENS

Free at every Education, No II.

TEXTILE FABRICS, with SPECIMENS.

London: THOMAS HARRISON, 59, Pall-mall.

THE FREEMASONS' QUARTERLY MAGAZINE. New series. Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage stamps to cover cost of postage. No VII. for July, 1854, now ready.

GEO. KOUTLEDGE and CO. Farringdon-street; and E. SPENCER, 35, Bell-yard.

The Builder.

SATURDAY, OCTOBER 14, 1854.

HOUGH external characteristics of the architecture of separate countries, viewed at the same date, may present extreme divergence, yet examination will often ow—what we have already found an identity leading principles of composition. When ese are discovered, much that would be otherse puzzling is rendered plain. The varied ms into which local peculiarities and national adencies become moulded in architecture, are en seen to bear the impress of that range of ought which—influenced by, yet—passes over ographical boundaries, and circumstances of mate, politics, ritual, and opinion.

Like any of the great events of the eventful och whereabout our last notice of the history architecture, as suggested in the Courts of denham, broke off,—like the progress of the eformation and the invention of printing,—ents themselves of moment in the subsequent ogress of art,—the main elements in the comsition of diverse forms may be seen in each ace, like the course of a vast wave over an tended area of country. Turned aside in one ace, reaching a distant point after the original arce had become covered perhaps by some ter stream, attenuated and spread out, or ingled with a foreign ingredient and scarcely cognizable,—still there is the same progressg element, present and worth the looking for, calculated to induce better apprehension of e causes of what, without it, might be inexicable.

Looking at the history of architecture in this ght, it is instructive to observe how many of ie common and old ideas about styles, need to modified. What were thought to be indeendent and local systems springing up in some ay which it seemed fruitless to examine, are en to be merely versions or offshoots of what found elsewhere. Thus there are evidences f a common thought in the ornamentation of yles, generally so different as those which ucceeded the conventional forms of the arly Gothic in England, and the Tre-cento rchitecture in Italy. The Italian manner, owever, was biassed by Roman example nd tradition: it therefore resisted the pertuation of northern influence, and styles of rnament which were conceived on the *motive*, are widely different in their more imortant characteristics. It took two centuries r more for the Decorated and Perpendicular rchitecture of England to run its course, uningled, save as to a few subordinate accesories, with Italian art; and even in regard to hese, it is contended, and with reason, that the rts in England at an early date were rather in dvance of those in the south. But in Italy, he tendency was constantly in the direction—s lately we were careful to discriminate—not f reproduction of classical architecture, but owards that of development of the dropped lassical style. We may conceive that the pirit of the Cinque-centisti—the artists of the eriod which now concerns us—was similar to hat which has been well expressed by some of he better order of modern Gothic architects, who advocate the still fertile scope of their ystem, but which living development has hardly yet been manifested in their works

Whether the Italians reached the standard of art which appears to be set up by others, namely, entire blindness to precedent, we may doubt; but we have already given the view which we think should be taken on this point. What we have now to do is to add a few remarks which may contribute to the right apprehension of the circumstances of this important period, of the nature of those inventions which could be made even by men impressed with the value of the antique, and to examine what there is illustrative of the period in the last Court of the series at the Crystal Palace.

Neither the Gothic architecture, nor the peculiar style of the Renaissance, can be said to have properly penetrated into Rome. Those who were Renaissance architects in the north, discarded their accustomed manner when in the "Eternal City." Little, however, was done: Rome was the centre of disorders such as prevailed, in a modified degree, through the whole of Italy. The papal chair was filled by the most execrable of men, and the name of a Borgia became suggestive of every atrocity, and the most loathsome and degrading vice. Elsewhere, the very men, like the Medici, who are named in each review of the history of the arts and learning, have had their crimes only overshadowed by the ends to which they applied some of their gains from the liberties trodden down. The "great name" of Nicolas Macchiavelli was prostituted to the service of the most dishonourable ends. The possible justification for the dictatorship in each of the Italian cities, was only the incompetence of the people to appreciate the advantages and the responsibilities of liberty. Yet, amidst all the turmoil and craftiness to be seen throughout the Italian history of this period, the arts rapidly advanced. We have witnessed of late years, in European states, the blighting effects of absolute government upon literature, and we might suppose that every state similarly circumstanced, would pass from the scene of its existence, and leave no sign. Not so, however, was it with the Italian states. Whilst the storm prevailed without, the artist drew himself more closely to the art and the works which, to men like Michelangelo, could become as wife and children. Had the great Florentine lived, like the author of our day, with the public ear for an assuaging confidant, how, through his sonnets, would have breathed the woes of his country, of which he could merely carve the story for the ingenious speculation of his admirers, in unyielding stone.

> "Grateful to me is sleep, and more so to be stone;
> Whilst shame and evil do endure,
> Neither to hear nor see is great good fortune;
> Therefore awake me not. Ah! speak low."

Such was the reply of Michelangelo to certain lines relative to one of the figures in the monument of Guliano de Medici, in the chapel attached to the church of San Lorenzo, at Florence, of which a cast is to be seen in the Court at the Crystal Palace, along with one from the monument of Lorenzo de Medici, in the same place.

Whilst the general condition of northern Italy was that which is here shadowed forth, one small dukedom became especially a centre of the refined influence of letters, whence have proceeded men who have had perhaps greater influence upon art than any others that have lived. This was the dukedom of Urbino, which under the Duke Federigo da Montefeltro, became one of the chief localities of an early and important school of painting. Here we meet with the names of men like Perugino and Leonardo da Vinci amongst painters, and Bramante amongst architects, as either resident, or having intimate relations with the society of what was known as the Athens of Umbria. Here, too, was probably the first introduction into Italy of the vehicle for painting —oil, by which works of such extraordinary power were shortly to be produced. The collection at Urbino contained a work by Van Eyck, and one of that painter's scholars executed a picture for the duke. Here in 1483, was born the great Raffaelle, one of the two men who, seizing the highest rank in whatever they undertook, have done almost as much to influence the future of architecture, as that of the branches of art for which they are most celebrated. Before he had attained the age of twenty-one, the future prince of painters had done something towards his future fame. In 1506, Pope Julius II. commenced the new church of St. Peter's, at Rome, designed by Bramante, the uncle of the great painter. Here we meet with Raffaelle in 1508, and somewhere between that time and the year of his early death in 1520, perhaps about 1515, were executed those remarkable works in the Loggie of the Vatican, the copies of which are the chief objects of interest in the Italian Court at the Crystal Palace. Were we seeking to show the characteristics of that especial school of art, which was the "goal of the Renaissance" (that which is said to have rejected everything not warranted by precedent), as distinguished from the peculiar *style* of the "Renaissance" period, we could hardly quote examples which have perhaps as much analogy to the Renaissance itself, as to the paintings of the baths of Titus. The influence of a great name was exerted, beyond its authority as leading to the practice of decoration in arabesque. Within the last few years so much has been done to elucidate every particular in the lives of the great painters, especially in "Passavant's Life of Raffaelle," that we will merely refer to points in the biography of the latter relating to facts of great importance in our subject. The ardour for collecting works of the antique, which at first had not been rewarded by many discoveries at Rome, at last penetrated to the hiding-places of some of the chief works of the classical times. Michelangelo has left works in sculpture, conceived in the manner of the antique, as well as those which are marked by his own peculiar excellences. Raffaelle even employed a staff of artists to delineate the remains of architecture as they were brought to light. We may suppose that he had early conceived that passion for the art of architecture of which there are many evidences in his works, and which a truly great painter should ever feel. The first Italian comedy was performed at Urbino, in 1513, when the decorations of the theatre were painted by Girolamo Genga, who had been a fellow scholar with Raffaelle. In these we meet with a round building in perspective, similar to that so often represented in the paintings of the latter artist. Appointed to the direction of the works at St. Peter's after Bramante, who died in 1514, known to have designed some of the chief palaces at Rome, as well as the Pandolfini Palace at Florence, the model of the Travellers' Club, there is no doubt of the influence which he exercised and the value of the precepts to be gleaned from the use which he made of classical art. And it is most important to notice that whilst the architects of the early Renaissance period like Brunelleschi and Alberti, of the commencement of the sixteenth century like Raffaelle, and of the later part of the same century like Palladio and Scamozzi, agreed in the close study of the antique: each had a character of style distinct from his models and that of other architects. In our modern works it is difficult to find anything of distinctive character. Each architect follows each model in turn, and nothing long. Might we not with advantage observe the Italian practice, where architects, if they did not contribute so much to the effect of architecture upon the public by offering up startling contradictions, and relics every day freshly snatched from the grave of antiquity, did at least, even in an age not unlike our own as regards research, contribute each one something to the resources of the style which he assumed to follow, and something worthy to be appreciated by the learned rather than to tickle the sight of the vul-

tecture should never disregard the fact, that all art is intended chiefly for the delight of those who are not professors of art; but it should aim to elevate the perceptive faculties to a high standard, not to work down to the low level at which they may be: it should seek to exercise the higher faculties in the observer, and recognise the true doctrine, that the higher intellectual pleasures demand the devotion of intellect both in the recipient and the provider.

Viewed in such lights, we have always thought that the progress of Italian architecture merited more attentive study of its minute changes than it had generally received; and as the Italian Court of the Crystal Palace does not afford the means of this to the desired extent, we will endeavour to sketch out the main elements in the progress referred to.

We have said, that whatever the generalised characteristics of style, architects, both in the fifteenth and sixteenth centuries, agreed in their devotion to the study of such Roman remains as had been discovered. In the works of Brunelleschi we might have noticed, as distinctive features, the arches springing from columns, and the column and trabeated system combined with the arcade, as in the Colosseum. By Alberti, the author of the standard treatise, "De Re Œdificatoria," new arrangements were introduced. The whole height of the interior was reached in one order, and the ceiling was vaulted. The palatial architecture of Florence of the early period has, however, a more original and distinctive appearance. Skill in the grouping of stories and openings, and cornices of an original and fine character, were its chief merits, whilst amongst its general peculiarities were profuse rustication, and arch-headed openings, with the central shaft, and having the line of the extrados in the form of the pointed arch. Had these buildings received some fifty years ago the same attention which they have had since, they might have earlier helped to show how great are the resources of architecture without the necessity of using the orders.

During all this early period, there seems to have been some hesitation about using the orders as in the old Roman temples, and it is supposed that the reason was the difficulty of the trabeated system, arising from the necessity of long architrave stones. The style of Bramante, generally held to have heralded the advance of the strictly Cinque-cento spirit, was generally Renaissance, or at least in his buildings in northern Italy. Its distinguishing features are mainly its ornamental accessories. In his Italian palace of Cardinal Wolsey, the basement has even a Gothic character. Bramante, however, employed coupled columns.

It has been stated by a learned professor, that Bramante was the first to suggest this arrangement, of which such good use was made many years later by Perrault in the Louvre, and by Sir Christopher Wren in Greenwich Hospital, and the portico of St. Paul's. But we believe examples are to be found in Palmyra—without alluding to the building at Rome sometimes called the Temple of Bacchus—which would direct us to an early origin.

Peruzzi was the first who effected a good combination between the orders and other features of the structure. He employed one order over another, giving, however, to the upper order an entablature proportioned to the whole height of the building,—an arrangement which later became a striking characteristic of the works of Sansovino.

In the works of Raffaelle and San Gallo, we notice the use of rustic quoins, of the perfected form of the balustrade, and of the orders in *small dimensions*, and only in the interior court, or appended to the windows. The interior of the Pantheon, no doubt, supplied the hint for the latter. We see it has been assumed, by the [illegible] before referred to, that the works of San Gallo preceded those of Raffaelle. San Gallo was a pupil of Bramante, as also was probably the latter architect. But the view which will probably turn out to be correct, is that which we held above, and which regards Raffaelle as the chief producer of the established Italian architecture; and with that view, we see, the statements given in the "Hand-book," as to the period of the death of San Gallo during the progress of the Farnese Palace, and some six-and-twenty years after the death of Raffaelle, seem consistent. One of the chief differences between the architecture of San Gallo, Raffaelle, and Giulio Romano on the one side, and the Florentine and other styles, is in the use generally of square instead of circular-headed openings, and of pilasters rather than columns.

Michelangelo's architectural conceptions are difficult to characterize, except generally by ascribing to them that vastness of idea and frequent singularity which appear in all the artist's works. The curved and broken pediment on which the figures in the two monuments recline, is an early suggestion of one of the features of the degenerate Italian, as also of common forms in that version of it which was established in France. In the library of San Lorenzo, he employed columns sunk in niches. He proposed an order of columns 8 feet in diameter. That idea was never carried out; but it is an index to the character of the artist.

In some respects, however, his example had a pernicious effect. The arabesque style of decoration practised by Raffaelle and Giulio Romano, whether according to recent doctrine or not, was beautiful in general composition, was full of fancy in design, and could be made accordant with architectural forms. Not so, however, with the vast areas required for the grand designs of Michelangelo. General architectural character, difficulties of interfering coves and groins, forms which, if designed with æsthetic reason by the architect, the principles of all good decoration would require to be preserved; all things were as nothing to the artist who worked *con furore*, and who would not have hesitated to paint an area as difficult as the roof of the Crystal Palace itself, could it have been covered with plaster. Still, in the life and labour of the man, how much is there for the modern Reynolds to point to, for the contemplation of the student.

This division of our subject, however, is too long for one article.

GREAT MALVERN AND LEDBURY.

Malvern is a delightful place, and presents, in addition to its beautiful hills, splendid views, and ancient church, some of the best modern houses that we know of, dotted over the irregular ground. The Abbey gateway, the tree-covered walk near it, just under "Mount Pleasant" there; the ancient stone cross, the lofty picturesque buildings for water-patients a little farther on, connected by the "Bridge of Sighs," and the noble prospect of

> "Trees, hills, and dales,
> Glist'ning with countless sun-beams,"—

that spreads far away before you when you have threaded the zig-zag and mounted to the Beacon, with the cathedral of the "Faithful City" as a principal point in the distance, will all come back to the memory of those who have once sojourned in beautiful Malvern.

The Worcestershire Architectural Society held its annual congress the other day, and in the course of it visited Malvern, where Mr. Edward Freeman, who is always ready to lend a hand in these doings, gave a pleasant descriptive address on the church. We were not in the town at the time (it has only just now been made a town, by the way), but we fell upon it a few days afterwards, and will make their visit a reason for saying half a dozen words about the church. It is curious on two grounds,—first, because it is a mixture of *only* Norman and Perpendicular,—the first and the last:—and, secondly, for the stained glass, which fills its windows. It was originally a Norman cross church, founded in 1085, and carried on till 1127; and this was transformed into a Perpendicular church between 1450 and 1490, leaving few of the architectural features of the old building except the columns and arches of the nave. The Norman walls were, nevertheless, retained. The Perpendicular work was not made to assort very harmoniously with the Norman, and there are two or three little problems for some minute investigator to solve hereafter. Sir Reginald Bray, who gave the design for Henry VII.'s Chapel, has been called the architect of the church, as we now see it, but beyond a figure in one of the stained glass windows, inscribed with his name, we know of no evidence in favour of the assertion.

At the east end of the church, the walls of a crypt were discovered a few years ago by the Rev. F. Dyson. These had been exposed to view for the society, and we had the opportunity of seeing them. The apartment formed was 36 feet long by 21 feet wide in the clear, with two smaller apartments or chapels at the side, and at the east end it had a double wall, with a space of 11 inches between the two.

The old glass, as we have said, is singularly curious, and includes a "Creation window" and a "Deluge window" in the chapel on the south side of the chancel, and a window illustrative of the foundation of a Christian establishment here in very early times by St. Werstan, in the clearstory on the north side of the chancel.

Of the modern glass put up in the church, the less that is said the better: the window at the east end of St. Anne's Chapel, in memory of the Rev. Dr. Card, the late vicar, is nothing better than execrable. The modern woodwork, too, is all very indifferent in character; and it is to be hoped that before long the pews, dress-box looking galleries, and organ-loft will give place to more appropriate fittings.

As to the west window, the date is to some extent fixed by the introduction in various parts of it, irrespective of the design, of white roses and radiant suns, adopted as a badge by Edward IV. We heard an antiquary, Mr. Deck, who was intelligently describing the glass to a party of visitors on the morning we entered the church, take credit for having himself *discovered* this evidence in confirmation of the assumed date of the glass, but he will find on inquiry it had long been observed.

The handsome central tower had been for some time in a failing state, and a few months ago its restoration was commenced under the direction of Mr. Scott. An arch of stone has been put into the east and west fronts of the tower, at the level of the nave and chancel roof, strongly tied at the springing with iron. Each arch goes through the wall of tower, about 4 feet 10 inches thick; and has two iron ties, 3 inches by 1½ inch, secured to the springers by keys. It must have been a ticklish job to shore up the superincumbent parts while the new work was being put in; and its execution does credit to the clerk of the works, Mr. Foster.

If you walk southward from Great Malvern along the side of the range of hills, you will find, near Mr. Berrington's residence, embosomed in trees, the church of Little Malvern. It is dedicated to St. Giles, to some extent a ruin, very picturesque, but is used, so far as it remains, as the parish church:—

> "Just peeping from a woody covert near,
> The Lesser Malvern stands. Sequestered church!
> The spot around thee speaks of quietness.
> Down at the mountain's base thou long hast braved
> The vernal tempest and December's storms;
> Yet at this tranquil time most fair thou art."

It is Perpendicular in style, has a handsome tower with low roof, and was built about 1482. There is a large hagioscope in both the north and south wall of the chancel, and some modern brasses to members of the Berrington family. The church is in the position of having a Roman Catholic for its patron, but Earl Somers nominally presents. If you look inside Mr. Berrington's gate you will see some beautifully kept grounds, a lime-tree that would shelter a detachment of cavalry, and some wonderfully luxuriant evergreens.

Lord Somers's church at Eastnor, which has been rebuilt in orthodox style, would afford matter for description; but we hasten on to

et to Ledbury, where there is a church com-aratively little known, but very curious. To do iis we get on to the other side of the Malvern ills and gain a noble view of Herefordshire. .edbury Church has a tower with a very lofty iodern spire, on the north side, separated from he church. The church itself is of various eriods: the west door is Norman, and so is the rcade of the chancel: the latter will be found to e very curious. Above it, on each side, but now nder the roof of the chancel aisle, is the ancient learstory, with small circular windows, and the rcade itself consists of very short Norman olumns carrying semi-cicular arches, on high quare pedestals, an arrangement very unusual n England. There are Norman sedilia, and he monuments, both ancient and modern, re numerous and interesting. Amongst the ormer, we may mention a female effigy on n altar-tomb, unknown, but evidently belong-ng to the royal family; and two with busts, imilar in character to that of Shakspeare, t Stratford-on-Avon, dated 1629 and 1638. There are but few of this exact form, and these re all confined to a small segment of time. The modern monuments include two by West-nacott, R.A. and one in memory of the late Mr. William Miles, of Bristol, by Flaxman. To the be-quests of the Miles' family the poor of the parish re indebted to the extent of 44*l.* per annum. There is also a monument, very recently erected n the chancel, by Mr. Thorneycroft, in memory f the infant son of Mr. John Martin, the mem-er for Tewkesbury. It consists of an altar-omb, on which lies the figure of a child, ery gracefully disposed. Against the south all of the chancel, which the end of the altar-omb adjoins, are two figures of angels, spread-ng out to the side. In a chapel on the north ide of the church are some of the most richly dorned decorated windows in England: a louble row of ball-flowers covers all the mullions nd tracery. These, together with a doorway eneath one of the windows, and which breaks p into it, are now being restored. It will be een from these brief notes that this church deserves fuller illustration than it has yet had. And so does its eccentric sexton.

Ledbury is a primitive place, with its half-imbered market-house standing on posts, to give an open space beneath, and other specimens f wooden architecture, and is usually singularly uiet. On the day of our visit, however, the nnual fair had filled the streets with men, omen, shows, cheeses, and onions: nigger melodists (the only things which endure for ever), were charming the ears of the yokels, and a representation of the way in which the allied rmy had taken Sebastopol, and blown up the "Rooshians," was being exhibited by a prompt peculator, with portraits of Raglan, Arnaud, Menschikoff, and the *Times* correspondent, "all for a 'a'penny."

The mists were hanging heavily over the low grounds when we started to return, but when the brow of the hill was reached, the country on the other side was seen bathed in moonlight, and there was a sky which took away your breath, so thronged it was "with all unutterable things."

DISEASE AND THE CESSPOOL SYSTEM.

Every day's experience, collected from every quarter, both of this and other countries, con-firms the fact that amongst the most powerful and prevailing causes which at least *predispose* those suffering or abiding under their injurious influence to attacks of cholera as well as of fever, we must place in the foremost ranks all such accumulations of decaying organic matter as those in cesspools, saturated sites, and stag-nant drains, to which must be added their but too frequent accompaniments, over-crowded dwellings, and impure or deficient water supply. The foul air generated in close and crowded apartments is of itself but too capable of under-mining the general health, so as to leave the inhabitant predisposed to any particular form of epidemic disease which may happen to prevail; but when to such a paralysis of the vital stamina as this there remains to be added the power and effect of the aërial poisons generated from their own decaying refuse, vegetable as well as animal, the only wonder is, that unfortunates such as these are ever rid of pestilence, except in the grave, whence, even still, they themselves then but too often contribute in turn to intensify the predisposition of those who have not yet been brought to that sad riddance of all ills. As we long since said,—if ever the New Zealander stand on the ruins of London-bridge, and see nothing but an uninhabited desert, it will only be because its site has become so saturated with the seeds of death as to have rendered it uninhabitable.

That the Great Plague of London had its victims predisposed and prepared for its fell ravages by the filth which at that time was not even huddled underground, as now it is, there are few who doubt. The substitution of cesspools for *such* a state of things was then, it is true, a decided, but, alas! a mere temporary improvement. The plague was stayed for two brief centuries, but the time was inevitably to come when the subsoil of London would be saturated with the plague-preparer just as the surface-soil had previously been. Have we not already *thrice* been warned that this period is almost reached? The inhabitants of this great metropolis, and the authorities who ought to see to its sanitary welfare, have here a subject which merits and demands their most serious and immediate consideration. As for the very limited district constituting the city-proper, much more has been done there than elsewhere throughout the metropolitan bounds, and behold already the cheering result! While the pestilence is laying down its heavy finger, here and there, on filthy and unwholesome spots around this common centre, warning us only, as it were, of future terrors, and pointing out the true plague-spots,—the city itself, in consequence of the continued efforts of its active sewers commission, surveyor, and sanitary officers, to increase its drainage and diminish its cesspools, has remained comparatively healthful and free of cholera. Is not this a most suggestive and instructive fact, so far as it goes? Ought it not to afford the utmost encouragement to every sanitary effort, not only throughout the metropolis and the City itself, but in every other town throughout the country? No less instructive, too, are the facts connected with the actual occurrence of cholera in its more deadly aspects. As for Bermondsey and other districts of the low-lying, sewer-stagnant, south of the metropolis, it is only necessary here to name them. In St. James's, Westminster, at Broad-street, Berwick-street, and thereabouts, our view that *the true plague-pit*, here, as elsewhere, *is the cesspool*, is confirmed by a recent report by Mr. Cooper, the district engineer of the Metropolitan Sewers Commission.

The cesspool system is rampant in this as well as in but too many other districts, and that, too, although the occupiers, in this, as in many other instances, were invited by the Commission to drain their houses into the sewers. The law must be altered, and more summary power given to the Sewers Commission; else what is the use of their making sewers at all? They must be made drainage commissioners as well as commissioners of sewers. Under the law as it now stands, they cannot make drains as they do sewers; neither can they, in anything like an effective or summary manner, compel the landlords of houses to do so. Hence they endeavour to obtain written complaints from occupiers, which are seldom or never forthcoming just because it does not *please* the landlords that it should be so,—that is, because it would *dis*please them and lead to notices to quit and other disagreeables; rather than incur which, occupiers will risk all the terrors of their invisible and scarcely recognized or accredited adversaries, the noxious emanations from their subsites and cesspools. Under the Nuisances Removal Act, it appears, the parochial authorities have more summary power, even over drainage, than the Sewers Commissioners; hence the latter are, in a manner, obliged to turn over their own proper responsibilities on to the shoulders of the former, who doubtless feel inclined much rather to disown the responsibility than to act on it. This is not as it ought to be. The Legislature really must make one and the same body effective drainage commissioners as well as commissioners of sewers. We have even, ere now, expressed our inclination to agree with the late Central Board of Health's idea, that the water supply, as well as the drainage—the arterial system, as it were, as well as the venous, or, at least, the excretory,—ought to be in one and the same hands, or under one and the same ultimate control. Not long since we had occasion to remark that every "house" henceforth erected without provision for complete and effective drainage, ought to be razed to the ground. This idea seems to have been suggestive; for a writer in *Tait's Edinburgh Magazine* now proposes that "a law should condemn to forfeiture, after a period to be specified, all habitations not fit, in every sanitary respect, for human habitation." To this further development of our idea we freely accord our hearty adhesion. First of all, however, let the Legislature give power to the Sewers Commission or other sewer authorities, summarily to mortgage, or otherwise dispose of, every such habitation and every mortgage itself that may be already upon it, in order to provide funds wherewith to cleanse and close cesspools and to open drains, sinks, pipes, and closets, fitting it, in all such respects, for what its rents and mortages imply it to be,—a human dwelling.

The connection of cholera (as well as fever) with the cesspool system and with the defective drainage which that system fosters, could not be more forcibly evidenced than it has been by the striking accordance of its separate outbreaks with those special warnings which we have ourselves long given, even to the extent of naming the exact spots in which the disease would break out—and has broken out; and sure we are that to our readers, who must have noted these warnings, and their fulfilment, it is unnecessary to enlarge on this subject. The outbreak in Gravel-lane and Ewer-street, Southwark, may be referred to as one of the more recent instances. Another has just occurred in Little Coram-street, near Russell-square, and at the back of the Russell Institution,* where pigs and cows do thrive, but not human beings. A poor gentleman who had suffered great annoyance from the constant effluvia emanating from the back yard here, and had bitterly complained of it to the Registrar himself, was at last attacked by the prevailing epidemic, and has recently died of the consecutive fever.

Before concluding our present remarks, we intended to note some matters of general interest and importance regarding this cholera fever and its peculiar relation to cholera itself, and even to plague, as also what appears to us to be the true relation of cesspool and other emanations both to plague and cholera, as well as to fevers in general, and involving what we may call the general pathology of these scourges, irrespective of, as well as with reference to, the ozone theories to which we recently pointed particular attention; but our limits in the present instance suggest postponement.

Meantime we wish to bring under notice the state of Little Chapel-street, Westminster, to which a correspondent "L. G." has drawn our attention with a view to obtaining some amelioration of its condition ere the expiry of another winter may again expose it to the risk of ravages by cholera or fever. He asserts that the whole length of Little Chapel-street—370 yards, containing about fifty houses, is entirely without proper drainage. Our correspondent's attention was called to this fact by some of the householders themselves; and he saw several kitchens and back premises, which showed that there is a cesspool under each house, and that within 4 feet of the floor of the shop or street a 9-inch wall only separates the usual cesspool appendage from the kitchen, there being in twenty-three instances no back yard at all but what is occupied by it and the water cistern! The parochial authorities or Board of Health as well as the Sewers Commissioners ought to lose no time in seeing to the correction of defective and deadly mal-arrangements and nuisances such as these, especially in a case of this kind, where the street in question stands in a most crowded district, such as those of the cholera

* See "London Shadows."

and never stricken Westminster, and has at the back of it a dead wall of great height, which prevents the possibility of an air-draught to disperse the noxious gases which must be continually arising from its teeming fever-stills.

In conclusion, we congratulate ourselves on the circumstance that others of the many dark "slop-holes" of London, which we have of late brought into the light, are now occupying that official attention which it was one of our main purposes to engage. Among these none have needed such attention more than various parts of the parish of St. Pancras, whose districts generally the various medical officers report to be now in an improving condition. In the central district, however, Mr. Sutherin, the medical officer, reports several cases of fever and diarrhœa, in that disgraceful locality, Vernon's-buildings, on the eastern side of the Pancras-road, near the Great Northern Railway terminus. These dwellings, as our readers already know, are in the most dilapidated state, and let out in tenements for which the most exorbitant rents are wrung from the poor, and although repeated complaints have been made to the owner, he refuses to do anything. The medical officer informs the Sanitary Board, that fever is never absent in consequence of the filthy state of these dens, and he earnestly entreats them to take steps to compel the owner to put them into something like a fit and habitable condition. Another monster nuisance, which impregnates the atmosphere for miles round nightly with the most noxious effluvia, arising from the burning of all sorts of filth and refuse, in Starkey, the nightman's, yard, Agar-town, is also reported on, and the clerk has been ordered to write and inform those reponsible, that unless steps are taken to remove the nuisances complained of, immediate proceedings, even by indictment if necessary, will be taken against them.

THE DICTIONARY OF ARCHITECTURE, AND THE ARCHITECTURAL PUBLICATION SOCIETY.

The publication of the third part of the "Dictionary of Architecture," which completes the letter A, seems to afford a fitting opportunity of reviewing the progress of this publication, and of considering how far it may have answered public expectation, or fallen short of what such a work should be. Having taken an active part in the proceedings of the Architectural Publication Society, and differing materially from those who bear the chief direction of this publication, I think it right to bring my standard of such a work to the test of public opinion; and the more particularly, as I owe it to many of my professional brethren, whose support has been given to the proceedings of this society, on the faith of my co-operation in carrying out the views enunciated in the original prospectus. A very serious question raised a great difficulty at the very commencement. It was whether the work should be an encyclopædia or a dictionary. It was obvious that if the former were adopted, it must embrace a general treatment of the various artistic and scientific subjects connected with architecture, which would require elaborate essays, displaying a whole view of the matter, considered both historically and as to its gradual development from its first principles to its most recent discoveries and perfection. This was out of the question, for unless supported by one of the leading firms of Paternoster-row, who would be able to engage the highest services by a liberal remuneration, it would be hopeless to find competent men willing to undertake such arduous and almost gratuitous labours. But as a dictionary only requires a brief clear definition of any particular term, with perhaps a short notice of its bearing, it was felt that such an undertaking, at the same time that it would be highly useful to all connected with architecture, was quite within the scope and means of the society. Consequently the title of Dictionary was adopted.

It was then important to trace the limits of subjects contained in so large a theme as architecture, which combines three great sections—"One whole in several parts, yet each part spreading to a whole:"—1. Geographical, or description of towns and edifices; 2. Biographical, or description of the leading men who have distinguished themselves as architects; and 3. Technical, or description of the more immediately professional subjects of design and construction, architecture being properly composed of art and science. It was at one time determined to keep these distinct, so that each should form a separate work. And this, I hold, was a wise determination, for one of the great laws of lexicographical compilation is simplicity, and another is not to overlay the immediate leading subject with extraneous or hardly relevant topics, so as to swamp the main matter and make one doubt the immediate purpose of the dictionary. This, however, was overruled at a subsequent meeting, and the fruits are apparent. Part I. contains 354 words, above sixty of which consist of the names of towns, and above sixty names of men. But even this numerical relation does not exhibit the actual proportion of matter, for generally speaking the descriptions of towns and men are much longer than the explanation of technical terms, and page after page may be turned filled with such information, but without any more immediately professional or technical description. We would take some of the earliest names which occur in the two first pages, and ask the practical use of the following:—

Aachen, the German name for Aix-la-Chapelle.

Ababde (or Sheik Abadeh), the modern name for Antinoe.

Abalon, supposed to be the ancient name for Biggeh

And again:—

Acerno, in the province of Naples, called Principate. Citra is the see of a bishop, and has therefore a cathedral besides a parish church.

Adranos is *said* to be the modern name of Hadriana.

Now surely it ought to be held that no town should be cited, which did not contain some very remarkable edifices, and these should be briefly noticed with the architectural points that rendered them worthy of consideration; but the descriptions of many towns seem rather to be transcripts of some local directory or general handbook, without the special merit which should distinguish an architectural guide. In fact, it may be considered that if the topographical section is to be completely comprehensive of every city, every town, or every village containing architectural objects worthy of notice, this portion would outswell every other, and the handbooks of Murray would be found more useful and complete, and more likely to be the companion of the travelling architect, than the ponderous folios of the Architectural Publication Society.

In the biographical section the like want of judgment is evident, by the introduction of obscure and doubtful names. The very second word in the dictionary is the name of Aaken, and one's wonder is excited, when we learn that all that the compilers have to say of him is, that "he was of Friesland, died soon after 1529, while executing the Oldenhoofer campanile at Leeuwarden;" but whether the Oldenhoofer campanile is good, bad, or indifferent, our informant sayeth not. Abarca (El Maestro Miguel de) of Beasain, is admitted to the posthumous honour of being considered an architect, because "he began, in 1657, a chapel in that town, to S. Martin de la Ascension y Lorinaz. In 1674, he was called upon to make, with Zunzunuigui, the formal inspection upon completion of the works of the church and convent of the Franciscans outside of Tolosa." Next we have "Abaria, who constructed, 1610, the tower of the parochial church of Sta. Maria de Oxirondo, at Vergara, in Guipuzcoa, Spain;" and "Abbati, a pupil of Ferdinando Galli Bibiena, noted for his etching of a catafalque from a design by his master, in 1788." Now all these names occur in the first two pages, and are a sample of apocryphal reputation of men, some of whom were, in all likelihood, never architects at all, but probably master masons, clerks of the works, engravers of a solitary architectural print, or at best, men whose works did not extend beyond an unknown church tower, or building a mill, as did Arcaria, at Mantua, in 1,400, or some unnamed occupation, as Abruzzo, who is mentioned merely because "he was employed at Naples in the eighteenth century," without one of his works being quoted; or Aichl, in practice at Prague, who died there in 1723, aged fifty-six!! and Agudo, Maestro Mayor in Cordova, in the year 1477!! all which is wonderfully instructive! In the names just quoted, several appear as Spanish architects, introduced, as already remarked, without any justifiable reason, as though it were desired to note those who had never yet been noticed, in order to rescue their humble names from oblivion, forgetful that this very oblivion is the judgment of history itself, passed on men whose names did not deserve a record in the memoirs of past times.

> There be *names* of high descent, and thereby stained honours;
> Names of fair renown, and therein characters of merit:
> But to lend the low-born nobles names, is to shed upon them ridicule and evil.
> Yea, many weeds run rank in pride, if men have dubbed them cedars,
> And to herald common mediocrity with the noisy notes of fame,
> Tendeth to its deeper scorn.
>
> *Tupper's Proverbial Philosophy.*

But a most extraordinary feature is the abundant introduction of Spanish technical terms, unheard of before on this side of the Bay of Biscay. It was never considered by the subscribers, that the "Dictionary of Architecture" was to be a polyglot compilation; but common sense would suggest that the technical terms to be explained and illustrated would be those English ones in common use, and such foreign words as had become naturalized among us. There is no doubt that hitherto our language has been poor and deficient in technical words in all branches of science, and so much behind the technicology of foreign nations, that in architecture we have borrowed largely from the Italian and French in order to supply the deficiency; so that there are many of their terms of art in common and familiar use among our architects. But it is most injudicious to introduce words which may have been casually used only once or twice by some accidental writer; and it argues still more affectation and pedantry to introduce terms never before used by English architects or authors, and borrowed from a country never looked up to as an architectural authority. Hence there is great objection to the swarm of Spanish words, such as *ajaraca*, *albohaire*, *alcatifa*, *alcayceria*, *almocaraba*, *almorrefa*, &c. which answer no purpose whatever but to swell out the dictionary, and produce a most fatiguing prolixity, creating just apprehension of its interminable length, when we find that letter A contains 1,362 words! What will the twenty-four letters of the alphabet produce?

The different timbers, whether used for building purposes or not, find a place without any obvious use, as alangium hexapetalum (woodooya and akola), a useful wood of Cuddapah, East Indies; and of like deep meaning appear Achras, Ahgubb, Alguilar, and Alizier (now probably for the first time meeting the eye of the wondering professional man), the upholder rising up to the same importance as the architect; and the landscape-gardener having all his trees lengthily treated of in their several varieties.

Even the false spelling of authors is corrected, and the misspelt word has its place in the alphabetical order; as Ægricranes, properly Ægicranes; and "Ægyci is a mistake of Stuart's Dictionary for Agyieus;" and many others. And few would be able to divine that the following were English architectural terms, or that some properly related to any department of architecture at all:—Ætiaici, Aegicranes, Acquimelium, Albarii, Albohaire, Adjutage, Adjection, Accouplement, Abuse, Acerra, Accubitum, Aciscalus, Acreme, Acroaris, Acroterion, Acrelithos(!), Aeropedium, Actus(!!), Adrian, Adnana, Adaar, Aethousa, Albenque, Ajaraca (!!!), taken out of Part I. only, or the first thirty-two pages. Another objectionable principle followed is that of not giving in frequent instances immediate references to authorities, but affixing a number at the end of articles, and which numbers will, I suppose, be explained by a subsequent index. But during the issue of the work such numerical references are veiled in obscurity, and will only be revealed when the last part appears, it is to be hoped before the Greek kalends.

thing, however, is more impolitic than to ly the reader by cross references of any sort, ato oblige him to take down one volume to edate the other. Each subject should be plete in itself, and nothing deferred to a fre letter or word. Thus the word "Awning" the very commonest explanation of its use oard of a ship or as a tent; while its nobler more special architectural use in the ancient tres and amphitheatres is most pedantically affectedly deferred until the letter "V" oduces the reader to "Velarium," which is English word at all.

It will be at once conceded, that such a dictionary should be comprehensive, but at the ne time the definitions should be as concise possible. Hence the propriety is very questionable of the introduction of the terms of her professions, particularly the legal. The tempt to define the law of the term, instead of niting the explanation to the term itself, is t to mislead any one who should trust to so oubtful an authority; and the danger still reater, when the law laid down and the authorities quoted are incorrect. Such is the case ith the words Advowson, Arbitration, Arbitrator, and Award. With the first an architect, s an architect, has never to do; and with espect to the latter, the more he relies on his gal adviser, and the less on the "Architectural Dictionary," the better, for it is but as the blind eading the blind.

Some of the articles are treated with much bility, such as those on Alabaster, Atmosphere, thens, and Ægina; but it is to be regretted hat the editors should have perversely retained he name of the Ruins of Ægina to be those of he temple of Jupiter Panhellenius, when it is ow recognised by the sounder classical archæologist as that of Pallas. And it is surprising hat the stupendous temples of Agragas (Girgenti), and its many other wondrous antiquities, should have been wholly omitted, while the word "Altar" occupies almost four columns of matter, Ambo two, Antwerp four, and Apiarium nearly one, without any reference to the structural form of the waxy cells of the bee, which once formed the subject of a very interesting paper read before the Institute of British Architects by Mr. S. Smirke.

It is to be observed, also, that the woodcut illustrations are too few; were they more numerous, space would be gained, and the explanations might then be more curt and less prosy.

What has here been said cannot surely be considered to have exceeded legitimate criticism. A work published by a committee, consisting of two professors and many of the leading men of the profession, naturally excited high hopes, and, indeed, ought to be very useful and valuable. Such are the only means left to me, in the endeavour to induce a different treatment, and to render the work in future really worthy the patronage of the profession and the public. Our character as architects is involved in it.

T. L. DONALDSON.

CHURCH-BUILDING NEWS.

Algarkirk.—We are requested to supply the name of the architect not ascertained till now. It was Mr. R. C. Carpenter.

Deptford.—The new church of St. John, of which we spoke last week, consists of nave, chancel, side aisles, north and south chapels, and vestry. The walling is of Kentish rag, with Bath stone dressings. The fittings are to be of deal, stained. Minton's encaustic tiles will be used for the chancel. The roofs will be of deal, stained, boarded on the back of rafters, felted and covered with slate. We give the dimensions:—The nave, 88 feet 2 inches long, by 26 feet 3 inches wide, and 63 feet to apex of roof; north aisle, 88 feet long, by 15 feet wide, and 40 feet high; south aisle, 23 feet 6 inches long, by 17 feet 6 inches wide; chancel, 39 feet long, by 26 feet 6 inches wide, and 58 feet to apex. The interior of the chancel roof is to be boarded to a Gothic form. The church is to accommodate above 1,000: about one-fourth will be free. The architect is Mr. P. C. Hardwick; the builder, Mr. Myers; and the clerk of works, Mr. J. Cooper.

Swinderby.—The parish church was re-opened on Wednesday in last week. This very old edifice has been restored at a cost of 600*l.* contracted for by Mr. Huddlestone, of Lincoln. The old north aisle has been taken down, rebuilt, and extended; and a new fir open-arch roof, stained and polished, and covered on the outside with Staffordshire tiles, has been placed over the building. Six new windows have been added, to correspond in architecture with the others; and two arches have been thrown across the church in the inside, the others having been capped and cleaned. Weathered buttresses have been added on the outside of the church, and on the roof four ornamental crosses have been placed. The nave roof has been removed, and another put on, to correspond both in the interior and exterior with the north aisle. The chancel has been restored at the expense of Mr. H. C. Bingham, the lord of the manor. In the interior, open stained deal benches have been set down in place of the lumbering old pews. An open porch and new door will be added to correspond with the south side of the edifice, and a light iron gate will be placed at the porch entrance. The flooring is of red and blue Staffordshire paving-tiles, supplied by Messrs. Peakes, of Tunstall. Mr. G. G. Place was the architect for the restorations.

Beccles.—The joint tender of Messrs. Woodrooffe and Son, and Mr. S. Pells, of Beccles, builders, has been accepted for the erection of the chapels, lodge, entrance-gates, &c. on the new parish burial-ground. The expenditure will be about 900*l.* and the works will be carried out agreeably to the plans prepared by Mr. Farrow, of Diss.

Abbotsley.—This church, having fallen into decay, has been under repairs during the last fifteen months. The present incumbent undertook the task of procuring means for its restoration, and has succeeded in completing its renovation. The pulpit, pews, and desks correspond with the rest of the interior improvements. The architect employed was Mr. Reynolds.

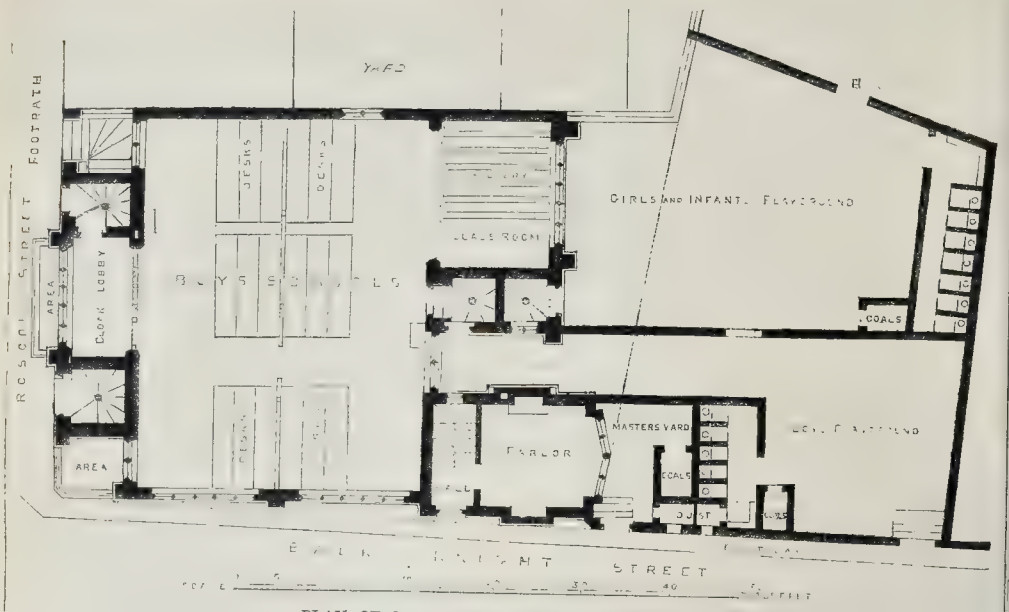
Wallingford.—St. Mary's Church, which has been closed for repairs for more than a year, was found so dilapidated in some parts as to require to be rebuilt: this has been done, and the church has been greatly enlarged: the body of the tower has been opened to the aisle by an arch, and a light organ-gallery erected, with sittings under, affording further accommodation. The old Gothic east window of the Ascension has been renewed and further embellished with the four Evangelists and other ornaments. The reopening took place on Tuesday in last week

Crewkerne.—The consecration of Christ Church, Crewkerne, was performed on the 20th ult. Towards the cost of the new edifice, Mr. Wm. Hoskins gave 1,000*l.*; Mr. Wm. Sparks, 500*l.*; and Mrs. Donisthorp, 200*l.* The erection of the church has already cost 3,638*l.* and there is only 127*l.* to be made up. It contains 410 sittings, and is in the Perpendicular style. The architect was Mr. M. Allen. The building is of Ham-hill stone.

Henbury.—The consecration of the church of St. John the Evangelist, at Hallen, near Henbury, took place on Monday before last. Mrs. Butterworth, of Henbury-court, gave the site for this church; and Mrs. Sawyer, of Severn-house, guaranteed a sum towards the erection, which cost 1,000*l.* Mr. C. S. Fripp, of Bristol, was the architect. The building is in the English style of architecture, and is capable of containing about 200 persons. The construction of the building was entrusted to Messrs. Wilcox and Son, of Bristol. The church, in addition to an east and west window, has ten small side windows, the latter painted and stained by Mr. E. Sawyer, of Severn-house. The east window, a small one, is the gift of Mrs. Butterworth, and was painted by Mr. Bell, of Bristol. It is a three-light window: in the top compartment is the dove, typifying, the Holy Spirit, and on the sides are two angels, bearing scrolls; whilst in the centre is the figure of our Saviour, with those of St. Peter and St. John, one on each side. The amount collected towards defraying the cost of the edifice is 511*l.* 5s. 11½d. The remaining sum will be provided by Mrs. Sawyer.

Tiverton.—The improvements in St. Peter's Church are progressing rapidly. The fine old tower is undergoing restoration. A meeting was convened last week by the ladies of Tiverton, for the purpose of opening a bazaar towards defraying the expenses.

Torquay.—The Society of Friends in the neighbourhood are erecting a meeting-house in the Warren-road, from the designs and under the superintendence of Mr Edward Appleton, of Torquay, architect. The style is Italian, executed with the limestone of the district, with Bath stone dressings. The building consists of porch entrance, waiting-rooms, committee-room over front part of building, and meeting-room, with offices, &c. The committee-room is so arranged as to be convertible into a gallery, when needed, by removing a shutter partition.



Pencrick (Cardigan).—The church here was reopened on Friday week. In consequence of a difficulty which the contractors, Messrs. John Joseph, of Cardigan, and David Jenkins, of Kilgerran, are said to have experienced in obtaining the necessary materials, the building was not complete.

Barthomley.—The restoration of the ancient church at Barthomley, near Crewe, is approaching completion. An entirely new chancel has been built from designs made by Mr. Trubshaw, of Stafford, in the Early Pointed style of Gothic architecture; and the triple lancet window will be filled with stained glass, executed under the direction of Mr. F. Howard, from a suggestion by the rector, the Rev. Edward Duncombe. The first window, in six medallions, exhibits the era before the appearance of Christ on earth, commencing with the "Fall of Man." The second period, "The Manifestations of the Saviour on Earth," occupies a double portion of space, and forms the centre feature of the whole window. Above it appears "The Entombment," "The Incredulity of St. Thomas," and "The Ascension;"—which, similar in size to "The Crucifixion," occupies the summit of the light. A third period, "The Progress of the Christian Religion subsequent to the Ministry of the Messiah on Earth," is also illustrated. The stained glass has been executed by Messrs. Pilkington, of St. Helen's. There is another small stained-glass window in the chancel, put up to the memory of Mrs. Duncombe, recently deceased; and two windows in the south aisle, illustrative of Divine mercy and Christian charity, also designed by Mr. F. Howard.

Wrockwardine.—The parish church has just undergone a thorough renovation, and been re-opened by the bishop of the diocese. It has been completely repewed, and has also received a new roof to nave, and north and south transepts. The whole of the west end has been rebuilt. New windows have been put in the north and south walls of nave, and in the west walls of north and south transept. An alteration has also been effected by the removal of the south porch, and inserting a new doorway at the west end, above which is a new three-light window of stained glass, executed by Mr. David Evans, of Shrewsbury. The space within the communion-rails is paved with encaustic tiles, as is also the floor of the chancel, the other parts of the church being paved with blue and red Staffordshire tile. The alterations and improvements have been carried out in less than three months by Mr. Dodson.

Newark.—The work of restoration at St. Mary's Church goes on but slowly. It was expected that the reopening would take place in the middle of October, but the church, it is now said, cannot be ready before the beginning of November. The seventeen windows which were to be reglazed with cathedral glass are almost completed.

Preston.—The restoration of the parish church now rapidly approaches completion, so far as the body of the exterior is concerned. The erection of the tower and spire will yet require some time. On Saturday week, according to the local *Guardian*, nearly 100 of the workmen were to celebrate the progress of the works by a supper in the National School-room. Of the new stained-glass windows, besides the chief window, two additional ones have been completed. The larger, at the east end of the aisle, is divided into four principal compartments, representing the Evangelists. The lower portion contains the four parables of "The Ten Thousand Talents," Matt. xviii.; "The Sower," Luke viii.; "The Good Samaritan," Luke x.; and "The Lost Sheep," Luke xv. The six smaller subjects occupying the upper part are the angel, the

PLAN OF ST. MARK'S SCHOOLS, LIVERPOOL.

bull, the lion, the eagle, the dove, and the pelican. The upper portion of the middle window on the south side of the aisle contains three angels, bearing the text,—"Suffer little children to come unto me, and forbid them not, for of such is the kingdom of heaven." The principal portion of the window is in three divisions, representing Christ blessing the little children, the background being intense blue, with diaperal ornament. The artist is Mr. Wailes, of Newcastle.

Rochdale.—The restoration of the parish church has now commenced. The estimated expenses of the proposed alterations are 1,000*l.* towards which sum upwards of 800*l.* have already been contributed. On Thursday before last the chief stone of the extension was laid. A gutta-percha bottle, containing various coins of the realm, and a newspaper of the day, were deposited.

Brighouse.—The foundation-stone of a new and enlarged congregational chapel was laid at Bridge End on Wednesday week. The architects are Messrs. Mallinson and Healey, of Bradford. The site adjoins that of the present chapel.

Edinburgh.—To meet the wants of the members of the Episcopalian Church in the vicinity of Newhaven and Trinity, the Rev. W. M. Goalen, with the sanction of the Bishop at Edinburgh, opened a temporary place of worship at the former place, which having prospered, he was induced to proceed with the erection of a small church (now completed) on the estate of Trinity, about half-way between Newhaven and Granton. Already, according to the *Scottish Ecclesiastical Journal*, fifty sittings have been engaged, and the chapel was recently opened for divine service. It is dedicated to the Holy Trinity, and is of the Middle Pointed style. It is built of Fife freestone in random squared rubble, with dressings of Craigleith stone, and consists of a chancel 19 feet by 16 feet, nave 45 feet by 20 feet, south porch and south-west spirelet, a vestry, with outside door on north side of chancel. The nave is divided into three bays, the westernmost being occupied by the porch and spirelet, the others with segment-headed two-light traceried windows in each. The east and west gables are pierced with three-light windows, with tracery in the head, of different and symbolical design, that for the chancel being more elaborate. The chancel arch is of two orders. All the timber, red Baltic, is planed and chamfered, stained and varnished. Open benches, with carved ends, occupy the nave, leaving an avenue in the centre, laid with encaustic tiles. The chancel is raised one step, and on each side is fixed a bench for the choir. The sacrarium is raised two steps, and is divided from the choir with altar rails of moulded wood work, enclosing the Lord's Table, which is framed of massive oak. Both choir and sacrarium are laid with Minton's encaustic tiles. Stone crosses surmount the apex of each gable, and a gilt iron one terminates the point of the spirelet. The church is provided with 150 kneelings. It has cost nearly one thousand pounds, the whole of which has been defrayed by the Rev. Mr. Goalen. A burial vault has been formed in the chancel for the founder and his family, and more's the pity such hurtful practices should be continued. Messrs. Hay, of Liverpool, were the architects.

ST. MARK'S SCHOOLS, LIVERPOOL.

The schools represented by our engravings have been commenced at the corner of Roscoe-street and Back Knight-street, in Liverpool, want of school accommodation having been long felt in the district. The architect, Mr. T. D. Barry, has adopted the Geometric Gothic for the style of his building. The principal front presents several windows, filled with tracery. The principal staircase is surmounted by a tower whose upper stage is pierced with similar tracery. The tower is covered by a pyramidal roof of high pitch, and is intended to be used in aiding ventilation.

The school buildings consist of three floors, the infant school occupying the ground-floor: the boys' school will be on the first, and the girls' school on the second or upper story. Each of the school-rooms has an area of 1,600 square feet, and will accommodate 200 children. Adjoining each school is a class-room and entrance-lobby, a portion of the latter being devoted to the reception of caps, bonnets, &c. The height of each of the two lower schools is 14 feet from floor to ceiling; the girls' school is to have an open-timbered roof, 11 feet high to the eaves. Access is obtained from Roscoe-street to each of the schools, so that the children will be kept out of the narrow side-street almost entirely. An airing-yard is provided for each school.

Adjoining the schools is a residence for the master, to consist of three bed-rooms, parlour, kitchen, scullery, &c. with a separate yard.

The buildings are to be constructed of grey brick, with quoins, dressings, and wrought work of the local red sandstone. The contract for the building has been taken by Mr. Thomas Hughes, of Liverpool, and the cost is estimated at 2,200*l.*

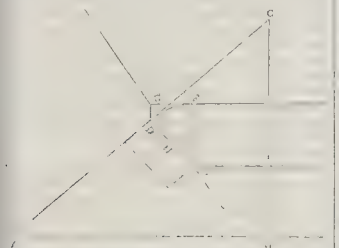
The site offered some difficulties, which have been satisfactorily overcome. H. shows a doorway to churchyard.

PRESERVATION OF OAK DOORS.

Seeing in the *Builder* an inquiry how to restore discoloured oak church doors, by your correspondent "O. W. W. F." I beg leave to give you my opinion and mode of treatment in such cases, and lament to see so many instances of neglect and ruin, especially in country churches, to the external oak doors and wood work, by the omission of more frequently varnishing with pure copal, say every two or three years. I have known church doors exposed to a northern aspect for twenty years remain fresh in colour and surface by proper attention to timely varnishing. In the case in your last number I fear the discoloration may be so deep as almost to require scraping before varnishing, but if not, the discoloured parts may be stained with raw sienna ground in water with a little umber, and applied with a brush as a grainer would do in distemper, and after that is thoroughly dry, which will be in less than an hour, give the whole a coat of good copal varnish and the next day another. Oak being of a very porous nature, requires more varnish than other woods to resist the variableness of our climate, and we frequently see the bottom parts of oak doors almost black from neglecting this necessary preservative to their colour and durability.

John Clarke.

With respect to the inquiry relative to the restoration of church doors, permit me to suggest the following mode which I have adopted frequently, and even within a few months, and find it the best that can be done, viz. let the doors be well cleaned, say with a cabinet-maker's scraper and glass paper, then give them one coat of equal proportion of boiled and raw linseed oil mixed: after it is well dry, apply one coat of best copal varnish, and the doors will be restored almost to their original state, and will be protected from the weather for a considerable time. J. S.



ST. MARK'S SCHOOLS, LIVERPOOL.—MR. T. D. BARRY, ARCHITECT.

A PROBLEM IN PRACTICAL CARPENTRY.

NOT seeing an answer to the question that appeared in the *Builder* (p. 456), I beg to enclose a diagram for all practical purposes. The question was as follows:—

Suppose the pitch of a roof to be at an angle of 45°, and the position of the depth of the purlin to be at right angles to the plane of the pitch, the purlin to be 6 inches deep; required the length of a line that would coincide a right-angled intersection with the hip rafter, or valley-piece, otherwise called the down bevel.

Let *a b c* on the annexed diagram represent one half of the roof, the slant or pitch, *a c*, at an angle of 45°, *d e*, the supposed depth of the purlin, 6 inches. Then, according to the geometrical construction from the point *e*, describe the arc, *d f*, draw *e f* parallel to *b c*, and *f g* parallel to *a b*, or at right angles to *b c*; draw *d g* parallel to *e f*; from the point *e* draw *e g*, which is the down bevel of the purlin in all particular cases. The arithmetical solution may be stated thus: the square root of the sum of the squares of *d e* and *f g* is equal to the length of line that would coincide at right-angled intersections.

Depth of purlin *d e* = 6^2 in. =	36
Length of the line *f g* = $4^2 \cdot 2426$ in. =	18
	54

54 = the sum of the squares of *d e* and *f g*, the square root of $54\sqrt{}^2 = 7 \cdot 348$, &c. = the length of line required. F. P.

PROVINCIAL NEWS.

Brighton.—The Congregational Chapel near the railway station is finished, and about to be opened. It is, externally, wholly of cut stone, and is picturesque and peculiar in effect. The light is mostly obtained from large rose windows, high up. Many houses are being built around Brighton, all of them poor in character. The town is very full; houses "a hundred a week:" every one you know is there; and a walk on the esplanade is equal to the destruction of your hat-rim.

Lynn.—The New Corn-hall building will soon be completed. The architect is Mr. Maberly, and Mr. Edmunds the contractor, both of Lynn. The building will be corporation property, and the amount of the contract is 2,450*l.* including the materials of the former building. The new hall will be 161 feet in length, 51 feet in width, and 40 feet in height, with glass roof, supported by iron pillars at the sides, bearing a series of twenty-four ornamental iron spandrils. The front is of stone, in the Ionic style. The capital will be surmounted by a large stone figure representing Ceres, with a sheaf of corn and sickle. This figure is nearly finished, and is the work of Mr. Patterson, statuary, of London.——The public library at the Athenæum will soon be removed into the new building. The Young Men's Institute building, as well as the Society of Arts, are now permanently under the same roof, and both are in full operation.

Banbury.—A water company has at length been formed. The subscribed capital is 10,000*l.* in 1,000 10*l.* shares. Mr. J. H. Jones, C.E. is engineer, and Mr. T. A. Hedley, C.E. superintending engineer and secretary. It is proposed to place 120 hydrants in the public streets and highways, to be used in cases of fire, for watering the streets, &c.

Southampton.—The new graving dock, at the docks, is architecturally complete, and on Thursday in last week the piles of the front dam were commenced being drawn up. Mr. A. Giles is the engineer.

Worcester.—The first of the three names in the list selected for she election of a country surveyor was, we are informed, Mr. Henry *Day*, not Mr. Henry.

Tavistock.—The inhabitants of this town have established a School of Practical Art, in connection with the Government Department of Science and Art. Several classes have met for instruction in mechanical drawing, &c. The Duke of Bedford has contributed towards the expense of models for the artisan classes, and for the local National school, British free-school, and his grace's school at Milton-green.

Kingsbridge.—Three men have been buried alive at Winslade quarry, near Kingsbridge, in the south of Devon. The quarry has been excavated to the depth of upwards of 250 feet: it descends 100 feet perpendicularly, and then runs underground in a sloping direction to the depth of 150 feet more. Three labouring men were at work in the quarry, when about a quarter of an acre of ground fell in upon them, carrying with it a blacksmith's shop, and burying the poor fellows in the ruins. The immense quantity of earth and stones that fell must, it is thought, have instantly killed them. There were, at all events, no hopes of their being extricated alive.

Plymouth.—The new schools in Trinity district are to be commenced forthwith, although the ceremony of laying the foundation-stone is not to take place until next month. The building is to be in the Early English style, and will consist of two school-rooms, each 51 feet by 18 feet, two class-rooms, and a tower (with bells) at the south-west angle. The walls are to be built of Pomphlett stone, with Bath stone dressings. The roof of the girls' school will be open. The architect is Mr. James Hine, whose plans were approved by the National School Society, and the Committee of Council on Education.

Wolverhampton.—The General Purposes Committe, at Wolverhampton, met on Thursday in last week, to consider the applications and testimonials for the vacant office of town surveyor, in this borough. There were fifty-six candidates, and the committee ultimately selected from the list seven of those whom they deemed the most eligible, to be laid before the town council. The election was to take place at the monthly meeting of the council on Monday last. ——At length, says the local *Chronicle*, there is some prospect of an efficient and comprehensive system of sewerage being carried into effect in Wolverhampton. At a meeting of the Public Works Committee of the Town Council, held on Monday in last week, Mr. Rawlinson was appointed the engineer to project a system of sewerage for the town, and prepare the necessary plans, estimates, &c. for carrying out these works. Mr. Rawlinson has also been appointed to report upon the best source whence to obtain an ample supply of water for the borough.

Runcorn.—The contracts for the alteration and extension of the Bridgewater docks, are said to have been entered into; and the works, it is expected, will be shortly proceeded with.

Sunderland.—On Monday week an accident happened at the new works of the south dock here, by which one man was killed on the spot, and three others were severely injured. They were engaged in removing a large stone by the use of a crane, one of the iron handles of which broke, and the men at the other handle were jerked, and the handle which they held broke from their grasp, and drove round with great velocity, coming in contact with the head of the deceased, who was instantly killed. The other three were dangerously injured.

Carlisle.—Mr. Rawlinson's report on the sites which he recently inspected in this neighbourhood, and which have been offered for the proposed County Lunatic Asylum, says the *Carlisle Journal*, has been submitted to Lord Palmerston, and forwarded for the perusal of the committee of ratepayers who were instrumental in procuring an official investigation into the capabilities of the various sites, of which no less than sixteen are, we understand, passed under review. The document is not yet public property, but its recommendations are understood to be, in effect, decidedly adverse to the Lowry Hill project, which is rejected by Mr. Rawlinson for reasons similar to those already noticed in our columns, as well as in those of the local papers, and in memorials of the ratepayers. The site which is recommended as fulfilling most completely the conditions essential for a good lunatic asylum is said to be the estate of Garlands, near Carlton.

Birmingham.—At a recent public meeting relative to the sureties of the new town-hall contractors, it was stated that Mr. Lloyd, a gentleman who resided in Wales, was one of the four sureties for the completion of the hall by Messrs. Hansom and Welch, the contractors. These gentlemen failed in their engagements, and Mr. Lloyd came forward to fulfil his share of the obligation he had contracted. After much consideration it was agreed that on payment of one thousand pounds, the claim against him should be considered as satisfied. Mr. Lloyd accordingly paid the one thousand pounds, and some of the most influential commissioners then told him that "if he proceeded with the work, and had it completed in time for the musical festival, *they would see that in the end he should not be injured.*" Mr. Lloyd accordingly devoted almost all his time exclusively to the completion of the hall, so as to have it opened for the musical festival. By these means he was admitted to have benefited the commissioners at least 400*l.* and promoted the public interests to the serious injury of his family. An attempt to redeem the pledge of the commissioners by means of a concert failed, the committee being obliged to make up the receipts to a sum of 200*l.* leaving 800*l.* even of his original loss uncompensated, and to which remained to be added a sum borrowed, it appeared, by the architects during the progress of the work, and for which Mr. Lloyd had become liable, so that in all his losses were estimated at upwards of 2,000*l.* Farther efforts were made, but without avail, and a public meeting has lately been held in order to make a final attempt in this stingy town to keep faith with Mr. Lloyd, so as at least to leave him not a serious loser on the whole transaction. The meeting subscribed fairly, it appears, towards the end in view, but the Birmingham public, we fear, are by no means likely to follow the example of the few, or to feel any moral responsibility in the matter, or trouble their heads about Mr. Lloyd's losses.

Leicester. — The foundation stone of the Leicestershire Infant Orphan Asylum, was laid by Lady Hazlerigg, on Friday in last week, in the Fosse-road, between Danett's-hall and the Hinckley-road. Messrs. Flint and Shenston are the architects, and Mr. Herbert the builder. ——The value of property in the town of Leicester appears to be on the increase. At a recent meeting of the council, it was mentioned that the increase to the borough property in buildings since Christmas was from 2,000*l.* to 3,000*l.* At a sale of property belonging to the assignees of a bankrupt, the competition and attendance, according to the local *Advertiser*, was of an extraordinary character. Some time before the sale the room was completely crowded with a highly-respectable company, and many had to go away without gaining admittance. After a very spirited competition, the cottage and about two acres of land, situate beyond the Race-course, on the London-road, were knocked down for 1,850*l.* realising upwards of 800*l.* per acre.

Nottingham.—Mr. George Gill, the founder of the Working Man's Retreat, at Nottingham, and a contributor to the People's College there, has just announced his purchase of the property and premises of the late School of Design, and his intention to convey them to trustees "for the benefit and use of the people of the town and neighbourhood for ever." He is preparing to open them as a reading and news-room, with which he will connect a library of about 12,000 volumes. The institution is designated the Working Man's Hall. The minimum subscription is to be 1s. 6d. a-quarter. He will connect with it evening classes for instruction, at a moderate charge, in writing, arithmetic, grammar, geography, and other useful knowledge,

and on Sundays, religious instruction will be imparted to young men and women, both in schools and in congregation

Haddington.—The new Corn Exchange of Haddington, of which the foundation was laid about a year ago, was opened on Friday week, by a public banquet. The building, as described in the *Scotsman*, is of a simple character. The cost will, it is understood, be nearly 2,700*l.* of which sum about two-thirds have been raised by public subscription, and the remainder, along with the expense of maintenance, will be defrayed by a small charge for admission, to cease after the debt is extinguished. It is situated in Court-street, adjoining the County Buildings. The interior consists simply of a large hall, 130 feet by 50 feet. The longitudinal walls are 18 feet high, from which the roof rises to an apex of about 32 feet from the floor. The roof is supported by iron rods. and resembles the covering of a railway station. The hall is also internally lit with gas, so that it may be used for public meetings or otherwise in the evening. At the extreme end of the hall are a range of stalls, already let to corn, seed, guano, and other general merchants. The architect of the building is Mr. Farquharson, of Haddington; and the builder, Bailie Durward, of that town. Mr. Dickson, of Haddington, did the joiner-work, and the roof was put up by Messrs. Robertson and Lister, Glasgow.

Innerleithen.—A new chimney stalk, 120 feet in height, was blown down here in a gale, on Tuesday week. It had not time to consolidate before the wind tested its strength. It was fortunate it fell during the night when none were near it, and in an easterly direction, making a great gap in the back wall of a house, which was fortunately not inhabited. Workmen were forthwith set to clear away the rubbish preparatory to its re-erection.

LIGHTNING CONDUCTORS FOR BUILDINGS.

In the mechanical section of the recent meeting of the British Association for the Advancement of Science, Mr. Nasmyth described a lightning conductor for chimneys, which he conceived affords more perfect insulation, and is therefore safer, than those in common use. The present practice is to fix the conductor outside the chimney by metal holdfasts, by which means, during severe thunder-storms, chimneys are often damaged by the lightning entering at the points of attachment, and displacing the bricks. In the method of fixing the conductor recommended by Mr. Nasmyth, the metal rod is suspended in the middle of the chimney by branching supports fixed on the top. A conductor of this kind had proved efficient in storms which had severely injured other chimneys in the neighbourhood which were protected in the usual manner.

Prof. Faraday, on being called on for his opinion, said that he recommended that lightning conductors should be placed inside instead of outside of all buildings. He had been consulted on that point when the lightning conductor was fixed to the Duke of York's Pillar, and he advised the placing it inside, but his advice was not taken, and the rod was fixed outside, to the great disfigurement of the column. All attachments of metal to or near the conductor are bad, unless there be a continuous line of conduction to the ground. He mentioned the instance of damage done to a lighthouse in consequence of part of the discharge of lightning having passed from the conductor to the lead fastenings of the stones. The practical question for consideration by the mechanical section was, how far they could safely run lead between the stones of such a structure, for if it were done partially, leaving discontinuous series of such metallic fastenings, there would be great danger of the stones being displaced by the electric discharge. When such fastenings are used, care should be taken that they are connected together and with the earth by a continuous metallic conductor. Some persons conceived that it is desirable to insulate the conductor from the wall of a building by glass, but all such contrivances are absurd, since the distance to which the metal could be removed from the wall by the interposed insulator, was altogether insignificant compared with the distance through which the lightning must pass in a discharge from the clouds to the earth.

PROFESSOR COCKERELL.

Our readers will sympathise with Professor Cockerell in the loss which he and the service have experienced in the death of his gallant son, a lieutenant in the Royal Artillery, and who fell on the 20th of September, at the battle of the Alma, a few days only after this fine promising youth had joined his corps at Eupatoria. He has fallen bravely and early in his country's service, deeply lamented by a large circle of attached friends. It is impossible to contemplate without a thrill of horror the destruction of valuable life which is being caused by the mad caprice of an ambitious despot. All civilized Europe should shout in execration of such doings in this the nineteenth century.

FOREIGN NEWS.

Uniform of Building Officers in Prussia.—It seems that conjointly with other systematisation of the public service in Prussia, the official dress of the civil service is not neglected. The building officers (*Bau Beamten*), who form part of the department of the Ministry of Commerce, have to wear a blue coat, with black collar, like the military engineers, with gold lacings, &c.

Great connecting Railway Line in France.—Great preparatory studies and plans are now made for the so-called *strategic* French line, which would form a circle at a distance of 60 or 80 kilomètres around Paris. This line would connect all the hitherto existing great railway nets of France, as well as afford to all the great agricultural and manufactoring emporia of that country much shorter and less expensive communications.

The Modern Vasari. Recollections of an Artist's Life. By Dr. W. von Schadow. Berlin, 1854. 8vo.—This interesting book relates the youth-recollections of its author, being written in a spirited and sentimental manner, and receives an additional interest from the circumstance, that both Vasari and Schadow, were directors of Academies, the former at Florence, the latter at Düsseldorf. The life and art-activity of Carstens, Flaxman, Canova, Gotfried Schadow, Thorwaldsen, Cornelius, Overbeck, Rauch, and Rudolph Schadow, are here dilated upon, which affords many occasions to speak of collateral incidents and art-tendencies. M. Schadow thinks that a *regeneration* of art can only be effected by a *religious* elevation of artists, which he considers most needed, especially in the department of sculpture. Still, this very warmly propounded belief does not make him unjust; and the review of the works of Thorwaldsen, whose ideas were widely different from those of M. Schadow, shows the author exempt from any undue bias. Against one subject, however, M. Schadow is really inexorable, viz. the department of critics and criticism—forgetting, as it seems, that it was the *pen* which paved the way, and in many cases formed the material, for the fancies and exertions of the artist. The "Modern Vasari" receives an additional import from the illustrations with which the work is adorned, amongst which the medallion portraits of the above-named artists, engraved on wood, are the most valuable.

LIABILITIES OF SURVEYORS AND ENGINEERS.

Brown *v.* Leach.—This was an action in the Brentford County Court, before Mr. J. L. Adolphus and a jury, to recover 50*l.* for compensation in damages, under the following circumstances. The plaintiff is a gentleman residing at Strand-on-the-Green, Thames, Brentford, and the defendant is the engineer to the Thames Navigation Commission and the corporation of London, in which capacity he was made defendant.

Mr. George Keene, the solicitor, in opening the case, said his client unfortunately had a house and garden which he took great pride in, adjoining some engineering works now being raised on the banks of the Thames, and over which the defendant had the entire management as engineer and surveyor. No sooner had these works commenced than the builders, acting under defendant's orders, knocked holes and ran scaffolding in his client's garden-wall despite his remonstrance, destroying his fruit-trees and strawberry-beds—in fact, wilfully laying waste the plaintiff's pride—a delightful and profitable garden. Notice was served upon the defendant to remove the brick and timber erections set up. After this his client demanded 5*l.* for compensation. This small sum was named to avoid litigation. After some negociation the defendant offered 2*l.* 10s. in full satisfaction, which his client noticed by issuing the present summons. It was by his (Mr. Keene's) advice the surveyor was made defendant instead of the Corporation of London, whom it was no trifling affair to make defendants of in any case; and although the learned counsel would, no doubt, contend that the defendant, as servant to the Thames Navigation and Port of London, was not liable, still it would be a beneficial precedent for the jury to hold that, as engineer and surveyor, defendant had supreme control over the works of the corporation, and should be held answerable for all mischief arising from his superintendence and direction. The plaintiff and several other witnesses were called to speak to the damage and to the active part the defendant took in the direction of the works.

The learned counsel for defendant, who refused to call any witnesses, urged that it would be a dangerous proposition for surveyors, to hold them responsible for the acts of builders or bricklayers' labourers. With respect to the damages laid, they were a downright imposition.

The learned Judge, in summing up, observed that, if they thought the defendant had acted as uncontrolled director of the works, or was in the position of a contractor, he would be liable. If they considered that defendant was only acting in the capacity which surveyors usually did upon erection of works, the defendant would be entitled to a verdict. The damages appeared to be somewhat excessive. The offer of the defendant of 2*l.* 10s. would weigh against defendant's non-liability, although made perhaps without prejudice.

The jury said they were of opinion that the defendant had made himself liable under the learned judge's ruling, but that the damages laid were excessive: their verdict was for the plaintiff: damages, 10*l.*

The judge allowed full costs.

Notices of Books.

The Age of Glasgow Cathedral. By John Honeyman, Jun. Architect. Glasgow: Bryce, 1854.

The object of the writer of this pamphlet is to show that the present Cathedral of Glasgow was not erected till the thirteenth century, in opposition to some historians who insist on an earlier date for part of it. The result of his argument may be briefly stated thus:—

"David, after refounding the see of Glasgow in 1115, made his chaplain, Achaius, bishop of the diocese, somewhere between the years 1115 and 1129; who finding the church in a ruinous condition, rebuilt it. The new church was finished and consecrated A.D. 1136.

In the year 1175, Joceline, abbot of Melrose, was consecrated bishop of Glasgow. He was a great benefactor to his church, as well as to the city of Glasgow; and to the church built by Achaius he added a nave, which was consecrated A.D. 1197.

In the year 1233, William de Boddington succeeded to the episcopal dignity; who, finding the church much decayed and inadequate to the increasing importance of the see, commenced to erect the present magnificent structure, and probably finished the crypt and choir.

The nave was no doubt erected during a subsequent episcopate; but there is not sufficient evidence to enable us to determine by whom. The north-western tower evidently formed part of the original design of the nave; and although the upper portion of it may have been bungled at a later period, it must ever be a subject of regret that this picturesque feature of the western façade was removed."

Mr. Honeyman desires further to show that a headless effigy, called by some that of St. Mungo, the patron saint of the cathedral, who died in 601, is the monument of Bishop Robert Wisheart, who died in 1316; but he has no substantial grounds for his theory.

Glasgow Cathedral has been sadly treated by various hands—shamefully treated,—and we are glad to find there is at all events one looking on, ready to raise a voice in its defence, should further abuse be threatened.

Miscellanea.

PERMANENT EDUCATIONAL MUSEUM.—At the suggestion of the Society of Arts, the Lords of her Majesty's Treasury have decided that it will be desirable to establish a permanent educational museum. The nucleus of such a museum has been contributed by a large proportion of the exhibitors at the recent educational exhibition at St. Martin's-hall.

THE ARCHITECTURAL EXHIBITION.—It may be useful to remind some of our readers that the committee have taken the Suffolk-street Galleries for a term of years, and that the exhibition will be opened to the Public on the 11th day of December next, and will be closed about the 24th day of February. All drawings, models, photographs of buildings, or other objects intended for exhibition, must be delivered at the Gallery between the 1st and 5th of December. Two rooms, as before, will be set apart for manufactures, patents, and similar objects, bearing directly on architecture. We trust that all who are connected with architecture will use every endeavour to render this exhibition worthy of the art which it represents. The committee suggest that all drawings submitted in the competitions of the year, should find a place in it. Those who are not already subscribers, and who intend to become so, should communicate their names without delay to the secretaries. Subscribers and exhibitors will, of course, have free admission.

THE STRIKE AT DONCASTER CHURCH. — The strike of the stonemasons recently employed in the erection of the new parish church at Doncaster still continues, having lasted now for upwards of six weeks. A few days ago ten masons were obtained at a cost of between 40*l.* and 50*l.* from Bristol, but after working about three days they left the job, having in the meantime been won over by the turn-outs.

NEW CHURCHES AT PADDINGTON. — It is said that three new churches are to be forthwith erected in Paddington. The Bishop of London has contributed the sum of 1,000*l.* towards that object.

RAILWAY MATTERS.—The Bramhope Tunnel, after being repaired, and previous to re-opening, has been examined and gauged by Mr. F. E. Harrison, and Mr. F. Cabrey, the Company's engineers, and found, it is said, in a perfectly satisfactory state. The damaged part of the arch has been restored, and goods trains and engines are working through it as usual. In order to restore the public confidence, which has been shaken by the late accident, the directors have decided not to open it for passenger traffic until the workmen are clear out and it has been well tested for a week or two by the passage to and fro of heavy goods trains and engines.——The Great North of Scotland line, which extends railway communication forty miles farther north than heretofore in all but unbroken connection with the great railway system throughout the country, was publicly and formally opened for traffic on Tuesday before last. Huntly is the northern terminus. The line passes through a pleasing and fertile country, where the traffic is very considerable. The north of Scotland has hitherto been very deficient in railway accommodation. This line will largely contribute to make up the deficiency; besides that its completion so far will lead to further extension. It is proposed to go on to Elgin or Nairn, and thence to establish communication to Inverness. The electric telegraph has been put upon the line: it is being put up on the Aberdeen line, and very soon will be established in an unbroken line to Huntly. ——The Bengal Railway has been opened from Calcutta to Hooghly, about the distance from Calcutta that Manchester is from Liverpool. The natives crowded in to see the first performance of the iron horse; and the carriages provided for the occasion proved quite insufficient to accommodate the multitude. There can be no doubt that this railway will within a very short time materially affect Calcutta, not only commercially, but also socially. Hotels, refreshment-rooms, and lodgings, at Serampore, Chandernagore, and Hooghly, the three places through which the line runs, are already announced; and in a year or two hence, the probabilities are, that the fashionable world of Calcutta will live out of town at villas built on the river side along the line of railway. The effect which it is likely to produce upon Bengal, says the Calcutta correspondent of the *Morning Herald*, no one can calculate.

PREVENTION OF BOILER EXLOSIONS.—An invention patented by Mr. Samuel James Heeley, millwright at the printworks of Messrs. James and Charles Wardley, Over Darwen, where the apparatus is in operation, is intended to obviate explosions not so much by allowing the superfluous steam to escape, as by preventing its excessive generation, by causing it, when arrived at a specified pressure, to open the fire-doors. The same effect, it is said, takes place when the water becomes too low.

THE MATERIAL OF THE SEBASTOPOL FORTIFICATIONS.—The master of the Turkish merchantman which the Russian war-ship, *Vladimir*, so gallantly captured in defiance of blockades and allied fleets, while imprisoned in the Sebastopol fortifications employed his leisure to some useful purpose, by examining with a penknife the texture of the stone of which its walls are built; and he states that the stones are all soft and friable, and exactly resemble Malta stone. The *Daily News* seriously believes, that were George Stephenson alive now, he would not hesitate to sign a *bonâ fide* contract with powers like France or England, to take Sebastopol, or any fortresses or line of fortresses in the whole world; and asks, "What are any or all of the great military engineering achievements in the whole of Europe compared with the covering of England with the reticulation of railways? or did any twelve thousand troops, under the command of the most skilful officer, ever accomplish as much as six thousand 'navvies' under the command of a Stephenson, or a Dargan, or a Peto? What a trifle," it adds, "is Napoleon's road over the Simplon compared with the 'engineering difficulties' conquered by plain working men in half the districts of civilised Europe?" Six thousand navvies and a Stephenson or Peto would be no trifling aid, at all events, to the military who would back them; but we dare say that at the opening of the gates of Sebastopol, no great engineering skill or elaborate siege-works will be requisite to enforce the persuasive "rat-tat-tat" of those excellent "knockers," the Anglo-French cannon balls.

OPENING OF THE PEOPLE'S PARK AT MACCLESFIELD.—The inauguration of the public park at Macclesfield took place on Monday in last week, with *fêtes* and other demonstrations of satisfaction. The scheme for this park originated in 1850, in a desire to establish a park and public library as a memorial of the late Sir R. Peel. Seventeen thousand persons subscribed some 300*l.* in pence in a few months, and various noblemen and other gentlemen increased the sum to 2,300*l.* to which the Government was induced to add 500*l.* The park comprises an area of 16 acres, and has been picturesquely laid out, chiefly with fine evergreens, under the gratuitous superintendence of Mr. Barron, the chief gardener of the Earl of Harrington, at Elvaston. The principal entrance is from the Prestbury-road, on the western side, where a Gothic lodge has been erected, with gates to correspond; and near it is a Gothic pavilion, of light construction, principally of glass, to serve for a refreshment-room or for horticultural exhibitions. The architect of the latter building, Mr. J. F. A. Lynch, of Macclesfield, like Mr. Barron, gave his services gratuitously.

NEWCASTLE SOCIETY OF ANTIQUARIES.—The usual monthly meeting of this society was held in the Castle of Newcastle on Wednesday in last week. Dr. Bruce suggested that the society should have a field-day once a-year as it would give a useful impetus to their proceedings. It was stated that in some recent excavations in the yard of the Blue Bell Inn, the workmen had come upon some stones, supposed to have formed part of the Roman wall. Mr. Fenwick observed that this would appear to indicate that the wall had taken a more southerly direction than had hitherto been supposed. The town surveyor was requested, if any remains of interest were met with in the course of excavations, to communicate the fact to the society, and cause as much care as possible to be taken of them. It was remarked that interesting excavations might reasonably be expected during the construction of the new approaches to the High Level Bridge. A fine field not contemplated when this request was moved and made has since been afforded by the extensive fire which has involved so much of Gateshead and Newcastle in ruins. At this meeting Dr. Bruce, according to promise, began the reading of his paper on the altars at Cambridge derived from the north of England. This paper was read at the recent antiquarian meeting at Cambridge, but has since received some additions. It was illustrated by rubbings from the altars. Dr. Bruce will conclude the reading of the paper at next monthly meeting of the society. It was ordered that the printing of another volume of transactions be at once proceeded with.

THE CALCUTTA AND BOMBAY SCHOOLS OF PRACTICAL ART.—A school of industrial art has been commenced at Calcutta, on the same general principle as that on which those at home are conducted. A committee has been appointed by the Bombay Government, with a view of bringing into existence a somewhat similar establishment at Bombay, that most munificent and wonderful of Indian nabobs, Sir Jamsetjee Jejeebhoy having undertaken to pay the interest of 10,000*l.* or 500*l.* a year, to support a portion of the pupils attending it, Government constructing the buildings, and meeting all the charges of its maintenance. The establishment of an economic museum has also been taken up by Government.

ELECTRO-TELEGRAPHIC PROGRESS.—The electric telegraph betwixt Bombay and Calcutta, *viâ* the north-west provinces, is now nearly completed: the Lahore line is so altogether. Intelligence is now transmitted in one day over the former of these lines, the transit of the mail occupying ten days, and dispatches to London, including that intelligence, *viâ* Trieste, will reach this in twenty-six days; and, the wire laid down from the European to the African shore, and so on to Alexandria and Suez, and a fast boat placed on the Bombay line, telegraphic intelligence will always be transmitted betwixt India and England in twelve days, or in half the time taken up by the mail at its fastest.

NEWCASTLE-UNDER-LYME SCHOOL OF ART.—The first annual meeting of the subscribers and friends of the Government School of Art in Newcastle-under-Lyme was held in the Lecture Hall of the Literary and Scientific Institution there on Thursday before last. Around the hall were hung some of the drawings of the students. The mayor occupied the chair, and after a few appropriate introductory observations, called upon the secretary, Mr. Earl, to read the report of the committee for the past year. The report stated that the school had steadily progressed since its commencement in October last. The average number of pupils throughout the year had been thirty-five, and their progress, under the direction of the master, Mr. Williamson, such as to gratify the committee. The school had been pronounced, by competent judges, to be as complete, with respect to costs, examples, and general conveniences as any school in the provinces. The statement of accounts showed a balance against the school of 21*l.* 8s. 9d. which, it was said, would be mainly met by subscriptions promised and now due for the current year; and the committee hoped that in a short time the income from the school would meet the expenses.

MONUMENTS.—While the British Association were at Liverpool, a general meeting of the subscribers to the erection of a monument to Sir Isaac Newton, at Grantham, was held there, the Earl of Harrowby in the chair. With that view a subscription, originated at Grantham, was stated to amount now to 1,300*l.* A resolution was decided on, which comprised an expression of thanks to the Queen and Prince Albert for their patronage of the undertaking; a decision that the memorial should be a bronze statue, to be erected at Grantham, on the site given for that purpose by the town-council; that any surplus sum should be appropriated to the furtherance of science; and committees to be appointed to receive subscriptions, make selection of designs, and select an artist to execute the work.——Another design besides Mr. Bell's, for a monument to Mr. Montgomery, at Sheffield, has been formed. Mr. Milnes, the sculptor, has produced a full-length figure of the poet as he sat in his reading chair. The desire of the artist is, it appears, to offer his design in competition with Mr. Bell's for the public monument. Should that effort be unsuccessful, it is the design of Mr. Flockton, according to the *Sheffield Independent*, to have the statue executed and placed under the portico at the Mount.——As a monument to the late Daniel O'Connell, it is proposed to build over his remains a chapel, a round tower, and an Irish cross, as already mentioned, the tower being 160 feet high. The ceremony of laying the foundation-stone took place in week before last, when a large number of the friends of the deceased were present, including several members of his family and their children.

MR. DOBSON, JUN. ARCHITECT.—Our readers have probably remarked in the newspapers the sad fate of Mr. A. Dobson, son of Mr. Dobson, Architect, at Newcastle, in the dreadful conflagration there. He was dug out of the ruins with only a bunch of keys and a mite of his dress to lead to the recognition of his body. He was a very promising young man, intelligent, gentlemanly, and unobtrusive. He was a pupil of Mr. Sidney Smirke, and went through the architectural classes at the London University, where he gained prizes.

ESTIMATES FOR BURIAL BOARDS.—Perhaps many of your readers are not aware that the Act lately passed for the formation of burial boards stipulates that in receiving tenders for their works they are not bound to accept the lowest. I would therefore advise builders to ascertain, if possible, before they waste their time in estimating, if any preference will be given to local tradesmen. In the case of the Beccles competition, the board, after inviting the public to send in tenders, seem not only to have taken advantage of the Act, by giving the work to a local tradesman, who was nearly 20*l.* above the lowest, but actually refuse the other competitors a list of the tenders delivered, without giving any cause more than "They could see no good end to be arrived at by it · everything had been fairly conducted," and coolly, "that the Act of Parliament expressly relieved the Board from any obligation to accept the lowest tender."

A BUILDER.

Dwellings for the Working Classes.—The Worcester Association for erecting improved dwellings have commenced active operations. Their plan at the outset was not merely to erect good dwellings for the working classes, but to select such a site as would give them the opportunity of removing existing nuisances and houses which engender filth and disease. They have purchased a batch of wretched dwellings immediately opposite St. Andrew's Church, in Copenhagen-street. The site is said to be well adapted for drainage and ventilation. There will be a frontage of 109 feet to Copenhagen-street, and of 128 feet to the river; and a thoroughfare will be made through the property by means of one gate opening into Warmstry-slip and another into Copenhagen-street, with a capacious yard in the centre, the buildings thus forming three sides of an elongated quadrangle.

Grimsby Cemetery Competition.—In reply to the advertisement offering 10*l.* for the designs most approved of by the council, the competitors were eight in number. The designs were exhibited in the Town-hall for one day, when the council met to make their selection. The designs of Messrs. Maughan and Fowler, of Louth, were selected. The committee found on opening the letter endorsed with their motto, that they had annexed a condition that they should be employed to carry out the works if their plans were adopted, or otherwise they would withdraw them from competition. After a long discussion on this subject the council divided, when it was carried, by a majority of one, that they should be employed.

Yorkshire Architectural Society.—The annual meeting of this society was held on Thursday in last week, Sir Charles Anderson in the chair. The report urged the importance of the migratory movements of the society, and of increased attention being paid to restorations of ancient churches. Malton and Pontefract were recommended as the places at which the next spring and summer meetings of the society should be held. Mr. Walbran was to have read a paper on the churches of Barwick and Sherburn-in-Elmet, but was prevented attending by indisposition. In his absence, the Rev. J. B. Scriven, incumbent of Clifford, detailed some interesting facts respecting the church at Bardsey, which, he believed, contained some of the purest Saxon remains in Yorkshire. The report was adopted, and committee and officers elected.

Great Influx of Timber.—A few days since, says the *Daily News*, we reported the enormous influx of timber-ships from America in the river during the present season, and the difficulties experienced by the captains in getting their ships docked to discharge, owing to the crowded state of the dock, and the great inconvenience experienced in providing accommodation for the timber. The East-India Dock Company, on account of every available space along the quays, &c. being filled with timber stacked, refused to dock any more laden deal ships, which, of course, led to the detension of a fleet down the river; for, although the West-India Docks were not exactly in the same condition, its basins were crowded with timber-ships, and some eighteen or twenty ships were at the buoys in the river, waiting their turn to be docked. The London and St. Katharine Docks refused to dock them under any circumstances.

The British Association.—About 280 papers were read in the seven sections of the British Association at Liverpool. Of these, 58 were upon subjects connected with mathematical and physical science, 43 upon chemical science, 31 treated of geology, 41 of zoology and botany, including physiology, 35 of geography and ethnology, 24 of statistics, and 44 of subjects in relation to mechanical science. Fourteen or fifteen of these communications were read by foreign professors and men of science—such as L'Abbe Moignot, M. Foucault, M. Dove, and M. Dubocq.

American Recreation.—There is a blacksmith who says every evening to his apprentices—"Come, boys! let's leave off work and go to sawing wood." This blacksmith must be brother to the farmer "down-east," who, when building a new house, used to try to get his hired men out with him of an evening to play at "dig cellar" by moonlight.

Bristol Archæological Society.—The meeting of this society was held at the Philosophical Rooms, Bristol, on Tuesday week, when a biography of Dr. White, the Bristol worthy, and founder of the hospital in Temple-street, was read by the City Chamberlain, Mr. T. Garrard.

The Iron Trade.—The alteration in the French tariff, by which the import duty has been taken off imported raw material, has opened the markets of that country to the iron district of Cleveland. Manufacturers have been over from France to examine the ore, and being satisfied with the quality of it, have contracted with proprietors of the mineral, to deliver several hundred tons a week, and for the present Hartlepool has been fixed as the shipping port.

New Schools at Hoxton.—It is proposed to erect a new building for the Sunday, day, and infant schools in connection with the Wesleyan Chapel, New North-road, Hoxton. The rooms now occupied are exceedingly small, and situated in confined localities, where the crowding together of so many children is detrimental to health. When the new chapel was erected, sufficient ground was obtained for new and commodious school premises, and an effort is now being made for their immediate erection. The site is in Mintern-street, immediately behind the chapel, and is freehold. The plans of the new buildings, prepared by Mr. James Wilson, of Bath, have been inspected for Government, and approved. They comprehend three school-rooms, which will accommodate several hundred children, a playground, and master's house, all the buildings in a style of architecture to correspond with the chapel. To accomplish this 2,200*l.* will be necessary; and as the schools are to be built under the provisions of the Minutes of Council on Education, no debt is allowed to remain upon the building: 1,400*l.* will therefore be required before the grant of 760*l.* from Government can be obtained. Subscriptions in aid of the building fund are being forwarded to Mr. F. W. Gerish, of 16, East-road, City-road, the treasurer, and to other gentlemen named in a prospectus just issued.

A Granite Tomb.—A wealthy nobleman, says an Aberdeen paper, has ordered from Mr. Macdonald (an Aberdeen stone-cutter), a mausoleum of polished granite. It is almost completed, and is really a wonderful piece of workmanship. We do not know its exact size, but we should say that it forms a cube of at least 14 feet each way; and every portion of it, inside as well as outside, is carved and polished with the greatest nicety. The design is pure Egyptian. The doors are carved into panels: the door-posts have lotus enrichments: there are angle toruses with the real antique ornament: the slabs forming the walls of the mausoleum have only one joint each; and the entablatures surmounting the four sides have each the device of one of the Egyptian deities. A fine effect is produced by the mixture of the Peterhead and Aberdeen granite—the doors, slabs, and pediments being blue, and the door-posts, the toruses, and the entablatures red. The paper alluded to speaks of some 5,000*l.* or 6,000*l.* as the presumed cost of the article.

Northamptonshire Architectural Society.—The annual public meeting of the Architectural Society for the Archdeaconry of Northampton was held on Wednesday week at Northampton. The meeting was thinly, but respectably attended. The hall was hung round with rubbings of monumental brasses, water-colour drawings, architectural plans, &c. and on the table were strewed drawings, specimens of terra cotta, encaustic tiles, books, &c. presented to the society. Mr. W. B. Stopford took the chair in place of Lord Henley, who had been prevented by railway delay from being present. The Rev. Lord Alwyne Compton read the Society's report. The Rev. T. James, of Theddingworth, then read a paper "On the Prospects of Architectural Development, as suggested by recent Legislation, Architectural Literature, Scientific Discoveries, new Materials, &c." and after some discussion on the subject, the meeting separated.

Diocesan of Lincoln Architectural Society.—The annual public meeting of the Architectural Society of the Diocese of Lincoln was held on 21st ult. in the Town-hall, East Retford, with an evening meeting, both presided over by Mr. G. E. H. Vernon, M.P. The hall was decorated with rubbings from monumental brasses, &c. The Rev. F Lowe read the report. The Rev. W. Dimock then read a paper "On the Fortunes of the Church of Southwell during the troubles of the tenth century," and "On the Church and College of Sibthorp;" after which, the Rev. J. Raine, vicar of Blyth, read a paper "On the Church of Blyth." In the evening, a paper was read "On the study of Monumental Brasses," by the Rev. T. P. Lowe, and one "On the Churches of Retford, and Historical Events connected with the Town," by Mr. H. Hall. Several of the members started from Retford, on the following morning, on the excursion usually taken the day after the general meeting. They visited Sutton-cum-Lound, Mattersey Priory and Church, Blyth, Worksop, &c.

Ventilation of the Sewers.—Various plans have been suggested for getting rid of the foul and poisonous smells emanating from the sewers *vid* the gully-holes. Allow me to add mine for your consideration: let there be a cast-iron ornamental shaft fixed over the gully-hole, say from 12 to 15 feet high, with an ornamental top fashioned somewhat after the present street lamps, or anything else fancy may suggest,—this top to contain a chamber with a sufficient number of gas jets continually burning, and so arranged that the impure air would have to pass through a body of fire and heated atmosphere, and thereby neutralizing the poisonous effects; another object would be obtained through effects of the heated air in the shaft, viz. the increased draught up the shaft, which would relieve the sewer of a large body of poisonous gas. In conclusion, I would further add that these shafts might be used at night as lamps, filling in the sides with coloured (strong) glass, which would not only distinguish them from the common lamp-posts, but would have a very pleasing effect at night.—W. G.

TENDERS

For boundary walls and piers for Highgate Cemetery enlargement. Messrs. Wehnert and Ashdown, architects:—

Thos. Roberts	£4,062	0	0
H. W. Cooper	3,669	0	0
Bennett and Holdsworth	3,529	17	0
J. Ellis	3,452	0	0
J. W. Thomas	3,450	0	0
Pollock and McLeman	3,447	0	0
H. and R. Holland	3,439	0	0
Rowland and Evans	3,413	0	0
Thos. D. Carter	3,360	0	0
E. Fleuster	3,342	0	0
Patrick and Son	3,290	0	0
Hill and Ladds	3,268	0	0
J. Glenn	3,210	0	0
H. Harding	3,200	0	0
Kirk and Parry	3,053	18	0
Clever and Stanger	3,050	0	0
Richard Batterbury	2,989	0	0
Geo Myers (accepted)	2,970	0	0
J. D. Couland	2,890	12	7
Wm Wheeler	2,865	12	7
John Gladspeak	2,793	18	11

For iron railing, gates, &c. for Highgate Cemetery enlargement. Same architects:—

John Glenn	£2,042	0	0
Pollock and McLeman	1,898	0	0
Rowland and Evans	1,884	0	0
Wm. Harmer	1,765	0	0
Benham and Sons	1,721	0	0
C. D. Young and Co.	1,705	7	0
Walmsley and Co.	1,675	0	0
The Horseley Company, Tipton	1,600	0	0
J. D. Couland	1,595	12	0
Kennard and Co.	1,589	5	9
Wm. Wheeler	1,575	12	0
G. Frasi and Co.	1,551	12	0
H. and R. Holland	1,549	0	0
Richard Batterbury	1,524	0	0
Kirk and Parry	1,480	0	0
Jones and Blaxton	1,453	13	5
Jackson and Cook	1,450	0	0
A. May	1,420	0	0
Cottam and Hallen	1,355	0	0
H. W. Cooper	1,355	0	0
Clever and Stanger	1,348	0	0
Cottam, Jun. and Co.	1,341	0	0
F. W. Gerish	1,326	18	8
Perry and Sons	1,300	0	0
Drury and Biggleston, Canterbury (accepted)	1,174	0	0

Quantities furnished in both cases by Messrs. C. Balam and S. B. Wilson.

For sundry works at Ludgate-hill, for the committee of the Milton Club. Mr. W. Wright, architect.

W. Cubitt and Co.	£11,130	0	0
Holland	10,928	0	0
Jay	10,305	0	0
Locke and Nesham	9,986	0	0
Hayward and Nixon	9,837	0	0
Lucas	9,626	0	0
Ashby and Sons	9,278	0	0

For the three chapels, two lodges, and entrance-gates for Preston General Cemetery. Mr. T. D. Barry, architect.:—

Mark Foggett, Manchester	£5,430	0	0
Hugh Yates, Liverpool	5,094	0	0
Thomas Hughes, Liverpool	4,925	0	0
Thomas Turner, Preston	4,880	0	0
Cooper and Tullis, Preston	4,882	0	0
James Armstead, Preston (accepted)	4,298	0	0

There were several tenders for separate trades, but as out of them all a whole tender could not be made up, the board decided to accept the lowest tender for the whole work.

For a pair of semi-detached villas, Crouch-end, for Mr. R. Goodman. Mr. Samuel Field, architect. Quantities supplied:—

Clarke	£2,080	0	0
Brass and Son	2,044	0	0
Roland and Son	2,030	0	0
Johnson	2,019	0	0
Dove	1,945	0	0
Plowman	1,912	0	0
Carter and Ellis	1,863	0	0

TO CORRESPONDENTS.

"Water-wheels."—I shall be glad to be informed whether you gain more power by a water-wheel of 30 feet diameter and 7 feet wide, with a fall of water of one ton per minute, or by a water-wheel of 15 feet diameter and 14 feet wide, with a fall of two tons of water per minute.—Riddle Wither.

ADVERTISEMENTS.

ERDARE, GLAMORGANSHIRE.
SURVEYOR WANTED The Local Board of Health for ish of Aberdare are prepared to receive APPLICATIONS ondidates for the Office of SURVEYOR for the above
It must be competent to prepare plans drawings, esti and specifications of all works connected with the sewerage, making, and repairing of the streets, as well as surface gs, and to superintend the execution thereof, test the ls, and see to the fulfilment of the conditions of the c n for executing such works. He will also be required to pon all new buildings within the parish, as to their drainwels, and other conveniences, and also upon cases of e, involving structural alteration for abating the same, nerally possess a thorough knowledge of all the rules, ons and regulations of all works connected with the sewerage, making, and repairing of the streets, as well as surface gs, and to superintend the execution thereof, test the ls, and see to the fulfilment of the conditions of the c n for executing such works. He will also be required to pon all new buildings within the parish, as to their drainwels, and other conveniences, and also upon cases of e, involving structural alteration for abating the same, nerally possess a thorough knowledge of all the rules, ons and regulations of all works connected with the sewerage, d by the Public Health Act, 1848. There will be no ion as to his private practice within the district of erdare Urban Union. Personal canvass of undertakings ies of such appointment are requested to send in their ns and testimonials, stating the amount of salary d, addressed to me, indorsed "Application for Surveyor," efore SATURDAY, the 28th day of OCTOBER instant.— ard do not engage to accept the lowest or any offer.
By order, H. J. HOLLIER, Clerk.
Aare, 2nd day of October, 1854.

TO PARENTS.
BUILDER at the West-end has an opening for a respectable, well-conducted Lad as INDOOR ENTICE, where he will have every opportunity of practising the trade as carpenter and joiner, and a general ge of the other branches. A premium required.—Address, 38, Berkeley-street West, Hyde Park-square.

REMAN of SMITHS WANTED, in an engineer's establishment in town; he must have filled a situation before, be a good workman, and used to heavy neral work. Address, stating where last employed and received, to B R. Office of "The Builder."

S-FITTER WANTED.—WANTED, a re-pectable YOUNG MAN, accustomed to good work. d employment and good wages. If a knowledge of boiler, would be preferred. If from the country, no objection. 0 95, Hatton-garden; or to Mr. CORNICK, Gas fitter, &c. Iead

TO PARENTS AND GUARDIANS.
ANTED, in a Surveyor's Office, of forty years' standing, a respectable, well-educated Young Man ARTICLED PUPIL, who would have immediate advantageous assisting in the practical part of some very ex survey and valuations, with the general routine of an Further particulars may be known of Messrs POOLE and s, Land Agents, Engineers, Land and Timber Surveyors, ers, &c Sherborne, Dorset.

ANTED, a strong, active Young Man, to generally ASSIST WORKMEN. One accustomed to and glazier's work will be preferred.—Address, stating ifications, and salary expected, to M. N. O. 17, New Rutt, Commercial-road East.

TO FACTORY CLERKS.
ANTED, an active and intelligent Person to KEEP MEN'S TIME and to take charge of Mate ddress, C. H. care of Messrs Hart and Son, Wych-street.

TO FOREMEN OF BRICKLAYERS.
ANTED, an experienced active Person, accustomed to Piecework.—Address, stating particulars, C Office of "The Builder."

TO ARCHITECTS, &c.
ANTED, a SITUATION, by a Gentleman who is thoroughly acquainted with practical building make fair and working drawings, write specifications, t quantities, and is capable of generally conducting a under the direction of the principal.—Address, W. J. ice, Turnham-green.

ANTED, to take the LABOUR and SOLDER of a quantity of PLUMBER'S WORK.— J. G. Rose Cottage, Walworth-common.

TO BUILDERS AND OTHERS
ANTED, a SITUATION as FOREMAN, by a good practical Bricklayer and Accountant, who ghly understands his business.—Address, A. B. 13, Harford-west street, Walworth-road

TO BUILDERS, DECORATORS, AND OTHERS.
ANTED, by a respectable Young Man, a RE-ENGAGEMENT as CLERK He has had considerperience in measuring, estimating, and bookkeeping. The references as to his present employers.—Apply by letter, post-G. G. Mr. Dunsten's, News agent, 44, Upper Ebury-street, s.

TO BUILDERS AND OTHERS.
ANTED, by a Young Man who is engaged in an Architect and Surveyor's Office during the day, ING EMPLOYMENT, to trace and copy drawings, make busts, spec fications, &c. and is willing to make himself —Address, R. A. 7, Strand, Charing-cross.

STONEWARE MANUFACTURERS AND OTHERS.
ANTED, a SITUATION, by a Practical Man, who thoroughly understands the Manufacturing of ds of Stoneware and Terra-cotta Work. The advertiser t cut the white glaze at Doulton and Watts's Lambeth , London. Apply to W. J. Burdett, Post-office.

GENTLEMEN, ARCHITECTS, AND BUILDERS
ANTED, by a well-experienced, middle-aged Man, a SITUATION as Clerk of Works, Shop Foreman, the Management of any Building Business, being well in drawings, measurements, calculations, and proper discharge of men, with wisdom and economy. He has lately left from eleven years' management, for the firm he has now Apply to N. E 3, Lower-terrace, Lower-road, Islington.

TO TIMBER-MERCHANTS &c.
ANTED, a SITUATION as TRAVELLER or SALESMAN, by a party of known experience in the Address, X. L. Office of "The Builder."

ARCHITECTS, BUILDERS, AND CONTRACTORS.
ANTED, by an experienced Person, of middle age, a SITUATION, either in the Office of a , or as Clerk of Works. Can have unexceptionable references aracter.—Address, free, to J. B. Mr. Low's, 31, Abchurch-ey

TO ARCHITECTS AND SURVEYORS.
ANTED, an ENGAGEMENT by a qualified ASSISTANT, accustomed to the preparing of drawings, details, and perspectives, and the general of an office. Good references.—Address, M. A. B. Post-ndale-street

TO BUILDERS AND OTHERS
ANTED, a SITUATION as WORKING FOREMAN, by a thorough practical Carpenter and with an excellent knowledge of the building trade in all ches and can produce good testimonials as to ability, &c. Y. Z. 38, Shepperton-terrace, Rosemary Branch, Hoxton.

DWELLINGS FOR THE WORKING CLASSES.—QUETERIE. elegant description Worcester Association for erecting improved other continental ings have commenced active operations ; an extensive assort- at the outset was not merely to erect ing as it per foot super- and adaptation, on the for the working classes, but to sele low, Mansion House ; or of would give them the opportunity New Bond-street.

nuisances and houses which en LACE GENERAL They have purchased a bat The Palace is opened on Mondays at immediately opposite St. Wednesdays, Thursdays, and Fridays, at the charge for admission is One Shilling. hagen-street. The Saturdays at noon, on which day the charge for drainage and ventila dings. INS will run from London Bridge to the Crystal 109 feet to Copper every week-day as follows : at 7 10, 8 10, 9 10, 2 40, river ; and at 7 40, 8 40, 9 10 p.m.; returning from the Crystal property by 11 30 a.m. and 12 20, 12 50, 1 20, 1 50, 2 20, 2 50, 3 20, 3 50, stry-slip rail trains will run whenever the traffic renders it necessary. 5 50, 6 20, 6 50, 6 20, 6 50, 7 20, 7 50 p.m.; and further addi- capacity and 7 30 p.m. Up Trains call at New Cross and Forest-hill. The in Citizen and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London-bridge, at least every ten minutes during the day, and at those hours when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at these piers.

The following are the fares to the Crystal Palace and back, including admission to the Palace :—

Shilling Days	First Class,	2s. 6d.
" "	Second Class,	2s. 0d.
" "	Third Class,	1s. 6d.
Saturdays	First Class,	7s. 0d.
"	Second Class,	6s. 6d.
"	Third Class,	6s. 0d.

In order to afford every facility to the public, and to prevent any delay at London bridge, arrangements have been made to pass the above tickets previously, at offices in different parts of London. Passengers taking their tickets at these offices will be admitted to the London Station by a separate entrance.

Fares between London bridge and the Crystal Palace Station, not including admission to the Palace :—

Single Tickets	First Class,	1s. 3d.
"	Second Class,	1s. 0d.
"	Third Class,	0s. 9d.
Return Tickets	First Class,	2s. 0d.
"	Second Class,	1s. 6d.
"	Third Class,	1s. 0d.

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 49, Regent-circus, Piccadilly.

Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d. each. These tickets can only be issued upon production of a season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class seats ; but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London-bridge, or at the Crystal Palace Stations ; passengers must therefore provide themselves with the necessary fare.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by railway, 4*l.* 4*s.* each ; without conveyance by railway, 3*l.* 3*s.* (the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

August 1854.

Orders per post receive the most prompt attention.—WILLIAM PRIGOTT, 15, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

THE LAW COURTS and ST. GEORGE'S HALL, LIVERPOOL.—The inauguration of St. George's hall, and the universal admiration which it has elicited as a work of consummate architectural magnificence and public utility forcibly remind us of the obligations and the respect we owe to the genius and the efforts of its lamented author, the late H. Elmes.

We should feel the obligations the more sensibly from the conviction that those efforts in our favour were amongst the proximate causes of his premature death, and from the fact that his surviving widow and son have been thereby subjected to pecuniary privations and embarrassments which we are honourably bound to mitigate by every means in our power. A committee has therefore, been composed of the subjoined gentlemen, to carry into this expression, in which it is confidently believed every individual of our community will warmly participate, by the provision of such means as will relieve Mrs. Elmes from those embarrassments under which she is now suffering.

The following gentlemen have been appointed a committee to receive subscriptions, and your contribution is respectfully solicited.

COMMITTEE.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C Hacker, surveyor, Duke of Bedford : "Office of Works, Woburn-park, Jan 3rd, 1854.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least although it will eat lead through in two years ; we have adopted it lately, both on account of being cheaper than lead, and much easier fixed and a more perfect job Yours &c. C. Hacker." N.B. The Company's Illustrated Circular contains instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint ders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Retail under Brand), either in the dry state or ground in Oil.
Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and ious qualities, is peculiarly applicable for Bed-place Decorations and House Painting. For Iron it possesses great affinity, and le its preservative properties for that Metal, is the only one employed for Marine or other purposes. It is now ground in Colours, and be successfully employed on Stucco, or any other outside work for which White Lead is used; it is not harder, is consequently more ble, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

SSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HE VIEILLE MONTAGNE ZINC
MINING COMPANY'S PURE PATENT WHITE ZINC
NT is unequalled for permanency of colour, hardness, and ancy of surface; it is unaffected by sulphurous or any other ars of remanal ns. Being completely innoxious and free from pernicious effects of white lead, it may be employed in all ments whilst in use without any inconvenience to the in- s.

e greatest caution is recommended to avoid any spurious ound ds that might be sold at cheap rates as Pure Oxide of . If any adulteration has taken place in the oxide, either in quence of impurity in the material primarily made use of to ce it, an imperfect mode of production, or by mixing with arile certain substances calculated to give it increased weight, n produces a very inferior instead of a very superior paint. the economy realised by the purchasers of such oxides nes a very expensive result to the owner of the premises ed with them.
E VIEILLE MONTAGNES ZINC OXIDES, dry or ground , are sold with the VM mark—in Hull, by Messrs. BLEN- L, SPENCE, and CO.; when ground and dry, by Messrs. MORLEY and CO., and by the Company's Grinding Agents, London, Messrs CHARLES DREAKE and CO. Wholesale ts, 62, King William-street, City; JACK and BRADY, lesale and Retail Agents, 3, Totter ham court, New-road, and pper Thames-street City. In Manchester and Liverpool, by rs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who ales acknowledged Painters to the Company for Zinc Paints. undertake painting shops, warehouses, dwelling-houses, &c. with, by Messrs. R. ANDERSON and CO. Timber-hush. Dry DE- and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, e had of the Company's Agents in Birmingham, Newcastle ow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, s, and the Isles of Jersey, Guernsey, Man, and Wight; also ublin, Cork, and Belfast.
e Company also employ an acknowledged painter in London. will undertake any description of painting with Zinc Paint ontract.
r further particulars, apply to the Company's General Agent ondon, Mr. SCHMOLL, 13, Manchester-buildings, West- ter.

HE VIEILLE MONTAGNE ZINC
MINING COMPANY beg to inform the public that they appointed Messrs. T. and S. KNIGHT, of Great Suffolk- , Southwark, as their painters, who will be ready to execute scription of painting and decorating with the Pure Patent e Zinc Paint.

UBBUCK'S PATENT WHITE ZINC
PAINT. THE PERMANENT WHITE of the Ancients, ously confined by its cost to the use of the artist, is now, by buck's Patent, reduced to the price of White Lead.
principal characteristics of HUBBUCK'S ZINC PAINT Economy, Health, Beauty, and Durability.
ilders and Contractors find Hub buck's Paint the only one ted to all their purposes; possessing the great desideratum of omy, combined with its high excellence as a paint, it ranks
Contractors effect a saving of 25 per cent. by using HUBBUCK'S PAINT for Outside Work.
UBBUCK and SON feel it necessary a caution should be cir- ed against imitations of their Paint. These manufactures ining frequently pernicious ingredients, are useful only in their orthless in use, whilst the inexperience of these imitators in roduction of pigments is evidenced, not alone by the coarse y appearance, but also by the deficiency of body in their ice, which is known to the painter to be all-essential. That nposition be not practised, therefore, notice that the cask is ed with the name of the original manufacturer, thus—
HUBBUCK— LONDON PATENT.
not so marked, the reason may be inferred.
ery information in the circular to be had of THOMAS BUCK and SON, Paint and Oil Manufacturers, Upper Smithfield (opposite the London Docks), London.

SURE and GUARANTEED REMEDY
AGAINST DAMP—GREEN and CO.'S OXIDE SOLU- N PAINT, for Damp, Salt, and Spotted Walls, price 18s. per n. Portland Cement Wash for the fronts of houses, inside of ches, railway stations, and all ordinary colouring, equal to ashfor durability, in the shade of Portland Stone. Price Palette nds of colour, for in-door and out door painting, dry in a urs, and superior to all other paints for durability and pre- properties to wood, iron, or cement.—All ordinary rs 8s per gallon GREENE and CO. Oxide Paint Factory, orfolk-street, Islington.

EENE'S and PARIAN CEMENTS and
FRENCH PLASTER for internal uses.—These well known successes dry quickly, and can be painted upon within a few —Made and sold by JOHN BAZLEY WHITE and THERS, Millbank-street, Westminster.

ARIAN CEMENT, for internal use, to be
painted in a few hours, and papered within a couple of days HARLES FRANCIS and SONS, Manufacturers of Roman an (under patent), and all other Cements in use for builtin oses, Nine Elms, London.

TKINSON'S CEMENT, so long known and
esteemed in London, for plastering purposes, is a quick- g Cement, that requires no colouring.—Sold exclusively by N BAZLEY WHITE and BROTHERS, Millbank street, minster; and Seel-street, Liverpool.

RTIFICIAL HYDRAULIC or PORT-
LAND CEMENT combines the valuable qualities of the ral Cements with the additional advantage that it greatly them in its cementitious properties; that it is not affected cost, and does not vegetate in damp situations. Account of PARATIVE EXPERIMENTS on the strength of the several Cements (read at the Institute of Civil Engineers), to be ned from the makers, JOHN BAZLEY WHITE and THERS, Millbank-street, Westminster, who prepare one ly only of Portland Cement.

6, South Wharf, Paddington.

ORTLAND CEMENT.—
CHARLES RICHARDSON has the greatest confidence in duding to the Trade the above superior CEMENT, being of rm colour and quality (a desideratum never before attained Portland Cements). It possesses extraordinary cementitious ties, resists the action of frost and heat, and is more durable any other Cement; does not vegetate, turn green, or crack; ured with which its eminent hydraulic properties stamp it at as the best cement of the day for work where all the above ties are required. It is manufactured on the only principle ard cement can be, and contrary to the statements put forth ers (who have) neither had the money to Manufactured by REAVES, Esq. at his Works, near the River Avon, and sent parts of the kingdom per boat or rail, at a reduced price to ade.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and Co have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement with little or no increase in price.
Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.
ASPDIN, ORD, and Co beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is consequently much cheaper.
A report of experiments made to prove the extraordinary strength of the Patent Portland Cement, may be had at their Office, New Wharf, Alnwick-street, Westminster; at their Works, Gateshead on Tyne, at Messrs. Rosher's Wharfs, Hollen-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—
FULLWOOD THOMPSON and Co. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works, situate near Rochester and Lower Halstow, and adjoining the Dunhall Wharf, on the river Parr 68.
These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.
FULLWOOD THOMPSON and Co will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.
St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES
WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS,
NORTHFLEET, KENT—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

GEO. & THOS. EARLE, CEMENT MANU-
FACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Hassle, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Portoriano.

BLUE LIAS LIME.—NELSON and CO.
beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all cases where it can be procured. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 36, South Wharf, Paddington; and at the Works, Stockton fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The
superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The small time for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.
SECONDS, PAVIORS, STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC
LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to HIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

TERRA-COTTA.—Statues, Statuettes,
Vases, Trophies, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the Fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs is of Terra-cotta and Portland cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSI-
TION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is such lining in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s. 6d. Required only by W. J. STENT, Minister. London Agents—Messrs. J. and G. WALLIS, 84, Longacre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

GLASS PAPER and GLUE.—Important
to CABINET MAKERS.—F. J. DAY'S celebrated extra large Glass Paper, 1½d. per ream; Cox's finest Scotch Glue, 57s. per ton, 60s. per cwt.; finest Imperial Glue, 53s. per ton, 56s. per cwt.; best London Glue, 48s. per ton, 48s. per cwt. Russian, German, and Gelatine Glues, in great variety. Wholesale and Retail, 6 and 7, New Inn-yard, Curtain-road, Shoreditch, London. Country orders executed on receipt of a post-office order, payable as above.

Chief Office, 37, Regent-street.

500,000 STOCKS will be SOLD by
AUCTION (to clear the field), close to the siding of the Wimbledon Railway Station (in lots to suit purchasers), on THURSDAY, the 26th of OCTOBER.—Further particulars, with plans, may be had at the Railway Station, and 1, a in Merton or Wimbledon, and at 16b, Waterloo road, a few days previous.

TO BUILDERS, CONTRACTORS, SPECULATORS, AND OTHERS.

TO BE SOLD, a clamp of prime quality
STOCK BRICKS, containing 500,000 bricks. Lowest price by the clamp, 29s. per 1,000; in smaller quantities, 32s. per 1,000. Situation three miles west of Marble Arch. Apply, to view, of Mr. HALL, Avenue-road, St. John's-wood. The bricks can remain on the premises secured until next June, if wished.

ASHES and BREEZE.—WANTED,
500 CHALDRONS of ASHES, and 300 CHALDRONS of BREEZE, to be delivered in a brickfield near Lee Church-st. East, or in barges at a wharf in Deptford creek. The whole to be delivered before the 31st MARCH, 1855.—Tenders to supply the whole, or a part to be addressed to Messrs. J. and C. W. TODD, Milner-street, Brompton, Middlesex.

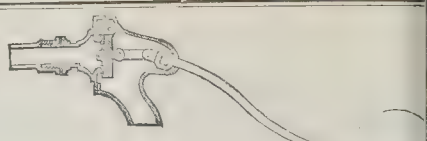
WOODBRIDGE WHITE BRICK
MANUFACTORY.—THREE HUNDRED THOUSAND SUFFOLK WHITE FACING-BRICKS, of very superior quality, FOR SALE.—Apply to THOMAS PEAKE, Woodbridge.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE LONDON PATENT BRICK COM-
PANY are now prepared to enter into contracts for the supply of Bricks made by BURSTALL'S PATENT.—Apply to JOHN A. S. DUFF, Secretary, at the Offices of the Company, No. 8, Old Jewry.

TO BRICKMAKERS.

THE LONDON PATENT BRICK COM-
PANY (Burstall's Patent) are now prepared to enter into arrangements for the USE of the MACHINES in the London district. The chief advantages of these machines (where they may be seen in full operation at the Company's works) are, the superior quality and economy of manufacture, the bricks (produced from dry clay) are conveyed at once from the machine to the kiln, and are ready for delivery in fourteen days after they are made, thus avoiding all the usual damage, delays, and expensive process of drying, &c.; the machinery and buildings occupy a very small space.—Terms and further particulars may be had on application to J. A. DUFF, at the Company's Offices, 8, Old Jewry.



MONEY WANTED.—The Local Board of
Health of Hastings are desirous of BORROWING, under the powers of the Public Health Act, 1848, and the sanction of the General Board of Health (already obtained), the sum of £60,000 immediately, and the further sum of 13,000l. in the spring of next year. The said several sums will be repaid, with interest, within the period of thirty years, pursuant to the said Public Health Act.—Any parties desirous of lending the above amounts, or any part thereof, are requested to communicate their terms for interest, &c. addressed to the TOWN CLERK, Hastings.

MONEY on LOAN, at 3½ per Cent. per
Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent garden. The amount of each loan is not to exceed 100l. is to bear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two Printed Forms of Application, and all necessary information, to be obtained by applying personally, between the hours of 9 and 3 on Tuesday next, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's.
By order, EDWARD S. STEPHENS, Clerk and Solicitor.

NOTE. The Trustees meet on the second Wednesday in every month, to consider such applications for loans as may be received by the first before the first day of the month. The sureties must be unexceptionable.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD STREET, LONDON. Instituted in 1820.

SAMUEL HIBBERT, Esq. Chairman.
WILLIAM ROBIN SON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to their respective risks.

FOUR FIFTHS, or 80 per cent of the profits, are assigned to policies every fifth year, and may be applied to increase the sum assured, to an immediate payment in cash, or to the reduction of the future premiums.

ONE THIRD of the premium on assurances of £50 and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of £50 and upwards, on the security of policies effected with this Company, if the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000 of which nearly 140,000 is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

On the 31st December, 1833, the sums assured, including bonus added, amounted to	£2,500,000
The premium had to invest on	81,000
And the annual income from Premium same, to	108,000

Insurances, with all participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary

THE ALBERT ASSURANCE COMPANY.

(Established in 1838.)

MORTGAGE and other LOANS made in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property to secure family interests and on good personal security.—EASTERN BRANCH 7, Finsbury-square.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

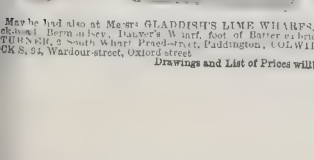
AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852



GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c 89, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 0d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cleanliness, cheapness, and durability, are universally admitted, while the rapid increase demand for them proves their estimate superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATERCROFT SET PANS OF IMPROVED CONSTRUCTION, and to their glaze, far surpassing any other manufactured or Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Cockspur, Bermondsey, Dawes's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kingsland-road, Chandos New Town, COCKS, 94, Wardour-street, Oxford-street; TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Bryanston-street, Covent Garden; and at EDWARD

Drawings and List of Prices will be forwarded free, on application.

DWELLINGS FOR THE WORKING CLASSES, Army-
Worcester Association for erecting improved dwellings, &c. all

The Association having been formed for the purpose of carrying out the above objects, and having now commenced active operations, it is the intention of the Directors at the outset was not merely to erect a few model dwellings, but to induce other proprietors, who are disposed to assist the working classes, but to do so by erecting the present month, would give them the opportunity of viewing, sell at reasonable rents, WHITE for the working classes, but to do so by erecting the present month, would give them the opportunity of viewing, sell at reasonable rents, WHITE nuisances and Houses which are erected. The Association purchased a large FREEHOLD LAND, measuring 3 acres, They have purchased a large FREEHOLD LAND, measuring 3 acres, immediately opposite St. Peter's Church, Bradford, and in the vicinity of the Foundry. The land estate and works comprehagen-street. The site are or erections, substantially built of stone, with all the drainage and ventilation requisite for the health of the inhabitants, and are all of first-class character, and manufactured by the most eminent makers, Messrs. Witham, of Leeds. The engine has the same expansive action, and the bore of the cylinder is 24 inches; stroke, 4 feet 6 inches; and fly-wheel, 18 feet diameter. The boiler is of 50-horse power, and will drive any number of lathes on the premises. The most desirable premises, forming altogether the most complete and commodious machine makers' and ironfounders' shop in Yorkshire, are enclosed in a separate yard; the main entrance is from the high road from Leeds to Bradford, to which the handsome suite of offices command a full front view; before which point the entrance-lodge will be built, and from thence for extension, while immediately at the back of the premises runs the Leeds and Liverpool Canal, into and from which there are two wharfs, for loading and unloading iron or other goods, with the utmost facility. Plans may be seen, and particulars had, at the Works; or at the Offices of the Auctioneer, Cross-street Chambers, Cross-street, Manchester; or 4, Kirkgate, Leeds.

YORKSHIRE.—Important Sale.—Desirable investment in a delightful district.—Valuable property, consisting of a gentleman's residence, fire-brick and tile manufactory, farming lands and cottages in the best part of Craven. The attention of the nobility and gentry is respectfully solicited to the undermentioned sale, as it affords the finest opportunity for any capitalist to invest his money in one of the most substantial and picturesque villas in Craven, Yorkshire. This delightful residence is situated on the banks of the river Aire; it commands an unbroken view of the most romantic and beautiful scenery, whilst its localities present attractions not to be met with by any estate in the kingdom. In its immediate neighbourhood may be enumerated the princely domain of the Duke of Devonshire, Bolton Abbey, Skipton, with its ancient castle; the meandering Aire, the lovely valley, and the towering rocks; in fact, this compact villa is one of that art and nature can command. Hunting, fishing, and shooting can here be indulged in at pleasure; whilst in a business point of view, it possesses every advantage, as the canal is the railway is close at hand, and it affords every facility to the trawffic of the transit of goods of every description. With this important information in

MR. WHEATLEY KIRK has the honour to announce that he will SELL this PROPERTY by AUCTION, in the Public Assembly-room, MIDDLEHAVE, in the county of York, on FRIDAY, the 27th day of OCTOBER instant, at SIX o'clock in the evening, subject to such conditions as will be then produced and read.

LOT 1.—All that substantial and compact DWELLING-HOUSE, now in the occupation of George Thornton, esq., the owner (who is leaving the neighbourhood), situate at the eastside of the town of Gargrave, on the banks of the river Aire, and within a quarter of a mile of the railway station on the Northwestern portion of the Midland Line, and surrounded by some of the most delightful and romantic scenery in the fat-famed Craven district. The house, which is in a thorough state of repair, contains dining, drawing, and breakfast-rooms, capital kitchen, scullery, wash-house, seven bed-rooms and water-closet, and is also fitted up with hot and cold water baths, and every convenience and comfort requisite for a gentleman's family. The grounds, which are tastefully laid out with fountains, rockeries, shrubberies, parterres, carriage-drive, croft, &c. comprise (including the site of the buildings) in. 3r. 4p. statute measure, or thereabouts. The outbuildings consist of gardener's cottage, excellent stabling, coach-house, barn, piggeries, fowleries, &c. There is a most excellent wrought-iron water-cistern attached to the premises, erected by the present proprietor, containing 4,000 gallons; also a sewer-tank under the farm-yard, holding 9,000 gallons. The above property is held under a lease for the residue of a term of 999 years, subject to a nominal rent of 8s. 9d. per annum, and the purchaser of this lot will be entitled to the pew in the parish church of Gargrave, which is within five minutes' walk of the house.

LOT 2.—A small PLOT of FREEHOLD LAND, near to the above, containing about 800 square yards, now used as a vegetable garden, it would also make a desirable site for the most productive in the country.

LOT 3.—All those FOUR CLOSES, FIELDS, or PARCELS of FREEHOLD LAND, situate in the township of Gargrave aforesaid, containing together 1a. 1r. 12p. statute measure or thereabouts. On this land there is a superabundant supply of the purest water; also a most extensive and valuable bed of fire clay, within 9 inches of the surface, and which is now being worked up by steam into bricks, tiles, sanitary-tubes, chimney-pots, &c. &c.; and with this lot will be sold all the capital liberty, plant, utensils, 10-horse high pressure steam-engine and boiler, clay mills, and machinery, erections, sheds, kilns, &c. now standing thereon, and which are in perfect condition, and of the newest and most approved principle.

LOT 4.—All those SIX recently erected and tastefully-built COTTAGES, with Western Cottage, situate at the outskirts of Gargrave aforesaid, and together with the land now used as gardens, attached to or in front of each, and containing, with the site of the said dwellings, two acres or thereabouts.

The house and grounds forming lot 1 may be viewed any day between the hours of TWELVE and FOUR, by applying to Mr. PETER NORTON, on the Premises, who will show the same; the other lots; and for any further information, application may be made to GEORGE THORNTON, Esq. on the Premises; or to the Auctioneer, Cross-street Chambers, Cross-street, Manchester; or 4, Kirkgate, Leeds; or to Messrs. MYERS and BOTHAMLEY, Solicitors, Town hall Chambers, Essex-street, Manchester.

SIX DAYS' SALE.

ALBION FOUNDRY, LEEDS.—Very important to Engineers, Ironfounders, Machine makers, Millwrights, Iron and Brass Founders, Railway Companies, Contractors, Brokers, and Others.

MR. WHEATLEY KIRK has the honour to announce that he is favoured with instructions from Messrs. W. Lord, the eminent machine maker, ironfounder, &c. of Albion Foundry, Eastgate, Bank, Leeds (who is declining to try leases), to arrange, catalogue, and SELL by AUCTION, on TUESDAY, WEDNESDAY, THURSDAY, FRIDAY, SATURDAY, and MONDAY, the 17th, 18th, 19th, 20th, 21st, and 23rd days of OCTOBER instant, each day commencing at ELEVEN o'clock precisely, the whole of their exceedingly valuable and modern PLANT, TOOLS, MACHINERY, UTENSILS, STOCK IN TRADE, &c. which are all in the best working condition, chiefly by Smith, Beacock, and Tannett, Shepherd's Hill, and Spink, Collier, &c. &c. viz.: Four Tannett Shepherd's Hill, and Spink, Collier, &c. &c. viz.: Four powerful planing-machines, some of which are fitted with double tool-boxes, to plane from 3 feet 6 in to 18 feet in length, and productive width and height; sixteen screw-cutting and slide surface-lathes, from 4 feet to 16 in. centre, head-stocks, and to certain lathes ranging from 5 feet to 22 feet long, complete with top driving and slide rests, and to suit; two four double and single geared handsome drilling machines, with ditto, ditto; three ditto ditto from 7 to 19 in. centred couples; five self-acting boring lathes, with universal chucks complete; five single and double geared drilling and boring machines; four shaping machines various, from 7 in. to 20 in. stroke; two slotting machines, with 7 and 9 in. strokes respectively; all the smiths' tools, anvils, bellows, tongs, swages, slake-troughs, &c.; all the glazier and grinders' utensils; a large quantity of excellent vices, benches, steel turning, boring, drilling, and planing tools; the valuable patterns and models in brass, iron, and wood; the whole of the valuable stock in trade of pig iron, and of iron, steel, copper, brass, lead, &c. The stores include a large quantity of emery in cakes, of the best quality, tallow, oil, new files, bolts and nuts, &c. &c. &c. Full particulars in future catalogues, which may be had at the Works; or at the Offices of the Auctioneer, Cross-street-chambers, Cross-street, Manchester; and 4, Kirkgate, Leeds; or by post, on receipt of eight stamps.

GARGRAVE, IN CRAVEN, NEAR SKIPTON, YORKSHIRE.

Very important to Landed Proprietors and Gentlemen, Builders, Farmers, Engineers, Contractors, Brokers, and Others.

MR. WHEATLEY KIRK very respectfully announces that he has been favoured with instructions from George Thornton, esq. (who is not leaving the neighbourhood for the south) to arrange, catalogue, and SELL by AUCTION, on SATURDAY and MONDAY, the 28th and 30th OCTOBER inst. all the following valuable and MISCELLANEOUS EFFECTS, &c. in, about, and upon his estate and premises, known as "The Grange," at Gargrave, near Skipton, in Craven, Yorkshire; viz. the residue of the valuable engine, plant, and stock in trade in the construction of the North-Western Railway from Skipton to Lancaster, including all the undermentioned valuable copper tubes and tower, which have recently undergone a thorough repair, a most excellent double-geared table, with slide rest, and one cast metal bed 20 feet long, by Sheppard, Hill, and Spink; pinks, hammers, shovels, picks, jacks, and other tools; waggons, carts, harrows, lurries, trucks, rails, cranes, blocks, chains, ropes, &c. &c. Also all the truly valuable, perfectly new, and modern stock in trade of the firm, including all kind of castings, tubes, for instance, chimney pots, garden pots; several whole kilns of most excellent new bricks, of the plan and of the patent perforated description. The farming stock comprises all the valuable implements of husbandry, charming mare pony, a splendid leap, and has hunted two years; bay mare, rising five years old; black mare, six years old; splendid brown bay mare, rising five years old; beautiful chestnut filly, one year old; cow, pigs, Cochin China and other fowls, ducks, &c.; large open family carriage, dog carts, waggons, harness, saddlery, &c. &c. The household effects are of a genteel and modern character, and include the usual appointments for drawing, dining, and breakfast rooms; study library, seven bedrooms, kitchen, and general culinary utensils, &c. &c.—Order of sale: first day, Saturday, 28th inst. the locomotive engine and tender. Railway plant, and three stock. Second day, Monday, 30th: Farming stock, horses, cattle, implements of husbandry, household furniture, &c. &c.

RED HILL, REIGATE, SURREY.—Thirty-two important and very eligible FREEHOLD VILLAS and other SITES, occupying a most eligible position, half a mile from the station.

MESSRS. CHINNOCK and GALSWORTHY will SELL by AUCTION, at the WHITE HART TAVERN, Reigate, Surrey, on FRIDAY, OCTOBER 27, at THREE, THIRTY for FOUR, in SEVEN LOTS, SEVEN BUILDING SITES, occupying an elevated and most commanding position, half a mile from the Reigate station on the South-Eastern Railway, contiguous to the estates of Mrs. Bishopp, esq. and the residences of J. E. Wilkinson and H. E. Gurney, esqrs. admirably adapted for the erection of detached villas and cottages, which are much needed and sought after in this favourite and charming neighbourhood. Each site commands a panoramic view of great beauty, extending over the vale of Holmesdale and a country remarkable for field sports, abounding with game, and within easy access of the plovers are bounded by good roads, the soil is rich, and there is a capital vein of stone available for building purposes running through the estate. The most eligible freehold property for investment, land in this locality being difficult to obtain, and daily increasing in value. The sights and site particularly select, and becoming more important as the railway is extended southward to and from the Crystal Palace and the metropolis.—Plans and particulars may be had at the White Hart Hotel, Reigate; Messrs. LEITHERSOPE and MACKRELL, Solicitors, 24, Great Winchester-street; of Messrs. CHINNOCK and GALSWORTHY, Auctioneers and Surveyors, 28, Regent-street, Waterloo-place, London.

IN BANKRUPTCY. Sixteen first-class Houses and Shops, and about Eleven Acres of valuable Building Land at Bayswater.

MR. WM. DOUGLAS is directed by the assignees of Mr. John Todd Merrick to SELL by AUCTION, in Lots, on TUESDAY, the 17th of OCTOBER, at TWELVE o'clock, at the PREMISES, No. 23, Hereford-road, Westbourne-grove, Bayswater, the undermentioned valuable LEASEHOLD PROPERTIES, held for long terms at low ground-rents, viz. Nine Shops and Houses, and a House suitable for a Public-house, situate in Hereford-terrace; Six Family Residences in Carcase, and nearly completed, in Monmouth-terrace; and a piece of Building Land comprising about Eleven Acres, held under a building agreement, and upon which the bankrupt has expended upwards of £2000 in the formation of roads and sewers. The several houses may be viewed prior to sale, and particulars, with conditions, obtained of W. PENNELL, Esq. Official Assignee, 26, Guildhall-chambers, City; of H. H. LAWRENCE, Esq. Solicitor, 6, Verulam-buildings, Gray's-inn; of Mr. W. C. SMART, Auctioneer, 14, Lowlestreet, Belgrave-square. The days of sale for the Regent's Park Estate and New Oxford-street property will appear in a few days.

NOTICE TO NAVY CONTRACTORS, SHIP BUILDERS, TIMBER MERCHANTS, AND OTHERS. Extensive Sale of fine large many Oak, Elm, Pine, and other Timber, standing on the Woolhampton and Brimpton Estates, midway between Reading and Newbury, and within easy distance of the Woolhampton Station, on the Berks and Hants Railway, and Aldermaston Wharf, on the Kennet and Avon Canal, Berks.

MR. ALEXANDER DAVIS is honoured with instructions from the Right Hon. Lord Viscount Falmouth to SELL by AUCTION, at the FALMOUTH ARMS INN, Woolhampton, Berks, early in the month of DECEMBER, 1854, a very heavy fall of fine old ENGLISH TIMBER.—Full particulars in future papers

The stores include a large quantity of emery in cakes, of the best quality, tallow, oil, new files, bolts and nuts, &c. &c. &c. Full particulars in future catalogues, which may be had at the Works; or at the Offices of the Auctioneer, Cross-street-chambers, Cross-street, Manchester; and 4, Kirkgate, Leeds; or by post, on receipt of eight stamps.

GARGRAVE, IN CRAVEN, NEAR SKIPTON, YORKSHIRE.

Very important to Landed Proprietors and Gentlemen, Builders, Farmers, Engineers, Contractors, Brokers, and Others.

MR. WHEATLEY KIRK very respectfully announces that he has been favoured with instructions from George Thornton, esq. (who is not leaving the neighbourhood for the south) to arrange, catalogue, and SELL by AUCTION, on SATURDAY and MONDAY, the 28th and 30th OCTOBER inst. all the following valuable and MISCELLANEOUS EFFECTS, &c. in, about, and upon his estate and premises, known as "The Grange," at Gargrave, near Skipton, in Craven, Yorkshire; viz. the residue of the valuable engine, plant, and stock in trade in the construction of the North-Western Railway from Skipton to Lancaster, including all the undermentioned valuable copper tubes and tower, which have recently undergone a thorough repair, a most excellent double-geared table, with slide rest, and one cast metal bed 20 feet long, by Sheppard, Hill, and Spink; pinks, hammers, shovels, picks, jacks, and other tools; waggons, carts, harrows, lurries, trucks, rails, cranes, blocks, chains, ropes, &c. &c. Also all the truly valuable, perfectly new, and modern stock in trade of the firm, including all kind of castings, tubes, for instance, chimney pots, garden pots; several whole kilns of most excellent new bricks, of the plan and of the patent perforated description. The farming stock comprises all the valuable implements of husbandry, charming mare pony, a splendid leap, and has hunted two years; bay mare, rising five years old; black mare, six years old; splendid brown bay mare, rising five years old; beautiful chestnut filly, one year old; cow, pigs, Cochin China and other fowls, ducks, &c.; large open family carriage, dog carts, waggons, harness, saddlery, &c. &c. The household effects are of a genteel and modern character, and include the usual appointments for drawing, dining, and breakfast rooms; study library, seven bedrooms, kitchen, and general culinary utensils, &c. &c.—Order of sale: first day, Saturday, 28th inst. the locomotive engine and tender. Railway plant, and three stock. Second day, Monday, 30th: Farming stock, horses, cattle, implements of husbandry, household furniture, &c. &c.

RED HILL, REIGATE, SURREY.—Thirty-two important and very eligible FREEHOLD VILLAS and other SITES, occupying a most eligible position, half a mile from the station.

MESSRS. CHINNOCK and GALSWORTHY will SELL by AUCTION, at the WHITE HART TAVERN, Reigate, Surrey, on FRIDAY, OCTOBER 27, at THREE, THIRTY for FOUR, in SEVEN LOTS, SEVEN BUILDING SITES, occupying an elevated and most commanding position, half a mile from the Reigate station on the South-Eastern Railway, contiguous to the estates of Mrs. Bishopp, esq. and the residences of J. E. Wilkinson and H. E. Gurney, esqrs. admirably adapted for the erection of detached villas and cottages, which are much needed and sought after in this favourite and charming neighbourhood. Each site commands a panoramic view of great beauty, extending over the vale of Holmesdale and a country remarkable for field sports, abounding with game, and within easy access of the plovers are bounded by good roads, the soil is rich, and there is a capital vein of stone available for building purposes running through the estate. The most eligible freehold property for investment, land in this locality being difficult to obtain, and daily increasing in value. The sights and site particularly select, and becoming more important as the railway is extended southward to and from the Crystal Palace and the metropolis.—Plans and particulars may be had at the White Hart Hotel, Reigate; Messrs. LEITHERSOPE and MACKRELL, Solicitors, 24, Great Winchester-street; of Messrs. CHINNOCK and GALSWORTHY, Auctioneers and Surveyors, 28, Regent-street, Waterloo-place, London.

IN BANKRUPTCY. Sixteen first-class Houses and Shops, and about Eleven Acres of valuable Building Land at Bayswater.

MR. WM. DOUGLAS is directed by the assignees of Mr. John Todd Merrick to SELL by AUCTION, in Lots, on TUESDAY, the 17th of OCTOBER, at TWELVE o'clock, at the PREMISES, No. 23, Hereford-road, Westbourne-grove, Bayswater, the undermentioned valuable LEASEHOLD PROPERTIES, held for long terms at low ground-rents, viz. Nine Shops and Houses, and a House suitable for a Public-house, situate in Hereford-terrace; Six Family Residences in Carcase, and nearly completed, in Monmouth-terrace; and a piece of Building Land comprising about Eleven Acres, held under a building agreement, and upon which the bankrupt has expended upwards of £2000 in the formation of roads and sewers. The several houses may be viewed prior to sale, and particulars, with conditions, obtained of W. PENNELL, Esq. Official Assignee, 26, Guildhall-chambers, City; of H. H. LAWRENCE, Esq. Solicitor, 6, Verulam-buildings, Gray's-inn; of Mr. W. C. SMART, Auctioneer, 14, Lowlestreet, Belgrave-square. The days of sale for the Regent's Park Estate and New Oxford-street property will appear in a few days.

NOTICE TO NAVY CONTRACTORS, SHIP BUILDERS, TIMBER MERCHANTS, AND OTHERS. Extensive Sale of fine large many Oak, Elm, Pine, and other Timber, standing on the Woolhampton and Brimpton Estates, midway between Reading and Newbury, and within easy distance of the Woolhampton Station, on the Berks and Hants Railway, and Aldermaston Wharf, on the Kennet and Avon Canal, Berks.

MR. ALEXANDER DAVIS is honoured with instructions from the Right Hon. Lord Viscount Falmouth to SELL by AUCTION, at the FALMOUTH ARMS INN, Woolhampton, Berks, early in the month of DECEMBER, 1854, a very heavy fall of fine old ENGLISH TIMBER.—Full particulars in future papers

OXFORD-STREET.—Materials of Dwelling house, Stabling for Sixty Horses, and Eleven Coachhouses, by

MR. RICHARDS, on the PREMISES, 18, Oxford-street and John-street, on TUESDAY, OCTOBER 17, at ELEVEN precisely, about six loads of Mr. Rose of timber, in 11 lots, of the flooring, &c. stall partitions, fifty iron racks and mangers, coachhouse and stable doors, &c. The fittings in house comprise panel doors, folding ditto, French windows, sashes, partitions, stairs, statuary marble chimney-pieces, register and other stoves, range, patent waterclosets, pumps, cisterns, &c. &c. painted, domed skylights, fine copper, wrought-iron entrance-gates, iron columns, and a large quantity of excellent materials. May be viewed and catalogues had of Mr. Rose, on the Premises; and of the Auctioneer, Tottenham.

SALES BY AUCTION.

MIDDLESEX, near UXBRIDGE.—For SALE by AUCTION, by

MESSRS. COBB, at the MART, London, on THURSDAY, the 31st day of OCTOBER, 1854, at TWELVE o'clock, in five lots (pursuant to an order of the High Court of Chancery, made in certain causes of Colston v. Lilly and Colston v. Lilly), a highly desirable FREEHOLD ESTATE, in the parish of West Drayton, near the village and immediately adjoining the church, comprising a brick-built house and extensive range of out-buildings, with cottage, lodge, &c. in the occupation of Mr. Bagley, and 19a. 0r. 8p. of fruit plantation and garden ground of the most valuable description, partly divided by high fruit walls, having good building frontages on the high road and resting on a deep substratum of capital brick earth; less than a quarter of a mile from the Drayton Railway Station, three miles from Uxbridge, and thirteen miles from London, offering a rare opportunity to Land and Building Societies, builders, brickmakers, and capitalists generally, for the investment of freehold land of the first description, with great local and other advantages, in a parish where much of the land is copyhold and of less desirable tenure.—The premises can be viewed by permission of the tenants, and particulars and plans may be had at the Mart; the Dolphin Arms, West Drayton; of Messrs. FREEMAN and BOTHAMLEY, Solicitors, 39, Coleman-street; of Mr. E. F. SEALY, Solicitor, 37, Moorgate-street; of Mr. S. P. NAYLOR, Solicitor, Great Newportstreet, St. Martin's-lane; of Messrs. MOUBRAY and ROWSELL, Solicitors, Verulam-buildings, Gray's-inn; of Mr. C. J. MOSS-CROSS, Solicitor, Craven-street, Strand, and of Messrs. COBB, Surveyors and Land Agents, 24, Lincoln's-inn fields.

HERTFORDSHIRE, near WATFORD. The Garston Estate, the greater part freehold, and the whole land-tax redeemed, with Mansion, Farm-house, and about 400 acres of excellent Land, desirably situate, within two miles of the Watford station, on the North-Western Railway, about seventeen miles from London.

MESSRS. SEDGWICK and SON have been favoured with instructions from the surviving Trustee under the will of John Falcon, Esq. to SELL by AUCTION, at the MART, on FRIDAY, OCTOBER 27th, at TWELVE, in eleven lots, the above valuable PROPERTY, presenting most delightful sites for building, the situation and soil being well adapted for that purpose, many parts of the estate commanding extensive and delightful views, the locality extremely healthful, and the neighbourhood highly respectable. It comprises a mansion, pleasantly situate, in a well-timbered paddock, with pleasure grounds, walled kitchen garden, coach house, stabling, farm house, and agricultural buildings, cottages, smith's shop, and 44 acres of most valuable and productive arable and pasture land, with several ornamental plantations. The turnpike-road to St. Alban's passing through the estate, and the London and North-Western Railway Company having lately raised a noble offering first class fare places to London for seventeen years to the use who build houses within two miles of the Watford station, of the annual value of £50 and the greater part of the estate being within that distance, nothing can be more desirable, and many of the lots are beautifully situate for building. Lord Clarendon's Lodge, Lord Ebury's, and many of the first families in the county and immediately at hand. May be viewed twenty days prior to the sale Sundays excepted; by applying on the premises, where particulars, with plans annexed, may be had; particulars and plans may also then be had at the Peahen, St. Alban's; Red Lion, Barnet; White Horse, Uxbridge; Swan, Rickmansworth; George, Chesham; Rose's Arms, Berkhamstead, and Hemel Hempstead; of S. W. JOHNSON, Esq. Solicitor, 5, Gray's-inn-square; of R. CANTWELL, Esq. 25, Whitefriars-street; at the Auction Mart, London; and of Messrs. Sedgwick and Son, Land and Timber Surveyors and Estate Agents, Woodside Lodge, near Watford, Herts, and at their farm, at Hunton bridge.

6,840 pieces of Paperhangings and Thirty Vein Marble Chimney pieces.

MR. BRAY, Jun. will SELL at his ROOMS, 28a, High Holborn, on WEDNESDAY, OCTOBER 18, at TWELVE for upwards of 6,840 Pieces of PAPERHANGINGS, suitable for the drawing and dining rooms, parlours, and bed-rooms, halls, staircases, &c.—May be viewed and catalogues had.

Important and valuable Freehold Building Land, at Holloway and Hornsey, for absolute sale.

MR. MARSH has received instructions to SELL by AUCTION, at the MART, opposite the Bank of England, on WEDNESDAY next, OCTOBER 18, at TWELVE, in LOT and a HALF ACRES of that valuable FREEHOLD BUILDING LAND, situate between the Holloway and Hornsey roads, a very healthy and rapidly improving locality, and commanding considerable one of the finest building sites at present uncovered or obtainable within so short a distance of London, possessing an important frontage to the Hornsey road, near the Finsbury Park Station, from which numerous trains every few minutes to all parts of town. The ground is well calculated for the erection of upwards of 300 private houses, twenty four shops with dwellings attached, and very moderately calculated to yield a ground rent of at least 1,300l. per annum. Arrangements have been made with the owners of adjoining property by which either the whole estate or any portion of it is uniformly and advantageously sworn. Building operations may be commenced immediately on possession, and this being the only freehold building ground at present procurable in the neighbourhood, it is highly recommended as a profitable source of employment for capitalists either by the creation of freehold ground-rents or building for rack rent. At the Archway Tavern, Holloway; of S. C. SEAMAN, Esq. Solicitor, 19, Panoras-lane, City; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

TO GASFITTERS, PEWTERERS, AND OTHERS.

TO BE DISPOSED OF, in consequence of a death, an established BUSINESS, which has been carried on by the present proprietor during the last four years a period never before remitted in the neighbourhood, which is only a few miles from town, would greatly add to the already extensive business that has been done—the premises are convenient, and fitted with every convenience, water and gas laid on; term of lease unexpired seventy-three years, at the low ground-rent of 3l. 3s. The stock in hand consists of lathes, and all the necessary tools for carrying on the gas-fitting business, forge, and lacquering stove. The neighbourhood is greatly on the increase, new buildings are springing up in every direction. To prevent trouble, the whole, including the lease, stock, tools, and goodwill, is offered for sale. For particulars, apply, between the hours of NINE and ELEVEN o'clock, to Mr. NEWBURY BALL, Auctioneer, 4, Love-lane, Wandsworth, Surrey, near the property.

TO ARCHITECTS AND SURVEYORS.

A COUNTRY SURVEYOR wishes to DISPOSE his BUSINESS, on very low terms will be exchanged. The opportunity is favourable, and the distance not great from London. Address, T. Office of "The Builder."

TO PAPERHANGERS IN WANT OF A SMALL CONCERN

TO BE DISPOSED OF, in consequence of the death of the late proprietor, the above STOCK in TRADE and FIXTURES, to be sold at considerably less than cost price.—Apply at 68, Princess-street, Leicester square.

QUANTITIES, Measurements, Dilapidations, Surveys, Building Accounts, Land Surveys, &c.—Architects, Builders, Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and undeviating attention to any business of this nature committed to the agency of a gentleman of long standing, on application to Mr. A. ANDERSON, Offices, 62, St. Martin's-lane and Acton-hill.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick square, in the Parish of St. George, Bloomsbury, Publisher, Bookseller, Proprietor of the Building News and Wyman's Weekly Gazette, at 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "The Builder," in York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, October 14, 1854.

THE CITY OF BATH ACT, 1851.

TO SURVEYORS and OTHERS.—WANTED, by the Committee of the above Act, who are the Local Board of Health, a person competent to undertake the situation of SURVEYOR of the said city, vacant by the death of the late Mr. Thomas Culverwell. The following are the duties to be performed:—To attend all meetings of the Board, special as well as ordinary. To make estimates of roads and measure works ordered by or connected with the proceedings of the Board. To prepare all requisite plans and specifications, serve all notices for the repairing and making all roads, and to superintend the execution of all the works connected therewith. To attend to the pitching, paving, cleansing, and repairing of the streets, roads, and highways. To inspect and report on all nuisances, and upon all other matters connected with his duties under the Act. The whole of his time is to be devoted exclusively to the duties of the office. The salary is 300*l.* a year without an office. There are three fortnights at present employed by the Board, who will be under the control of the Surveyor. Candidates for the above situation must send their testimonials "To the City Act Committee," under cover directed to the undersigned, on or before TUESDAY, the 7th day of NOVEMBER next; and no candidate will be elected under the age of 30 or above the age of 45 years. After the testimonials have been examined by the Committee, the names will be given to all of the candidates as may be considered eligible for the personal attendance before the Committee.

THOMAS CUTHBELL, Clerk.

Offices, No. 5, Westgate-buildings, Bath, 17th Oct. 1854

TOWN of LOWESTOFT.—The Commissioners of the Town of Lowestoft require the services of a SURVEYOR united with the office of INSPECTOR of NUISANCES. He must be practically acquainted with sewerage, building, and road work; and as the entire of his time will not be required, a salary only of 50*l.* per annum, with an allowance of 10*l.* per annum for office rent, will be given. For further particulars apply to E. NORTON, Esq. Clerk to the Commissioners, to whom all applications, with testimonials, are to be addressed not later than NOVEMBER 1st.

Lowestoft, October 12, 1854.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The CATALOGUE of the COLLECTION will be issued on the 1st of JANUARY next, including a limited space for advertisements for Fine Art Manufactures.

For particulars, application should be made to the Publishers, Messrs MASTERS and Co. 78, New Bond-street, and 33, Aldersgate-street, on or before the 1st of DECEMBER next.

Oct. 18th, 1854.

THE ARCHITECTURAL EXHIBITION, Suffolk-street Gallleries.—All DRAWINGS, MODELS, PHOTOGRAPHS of BUILDINGS, or PATENTS, MATERIALS, DECORATIONS, &c. intended for the department of manufactures connected with Architecture, must be delivered between the 1st and 5th of DECEMBER next.

Several gentlemen have already consented to act as local secretaries, in order to facilitate as much as possible the interest of exhibitors at a distance, and to afford information in their several localities. A list will be published as soon as arrangements are completed.

JAS. FERGUSSON, F.R.A.S.
24, Lincoln's-inn-place,
JAS. EDMESTON, Jun.
5, Crown-court, Old Broad street. } Hon. Secs.

THE LONDON SCHOOL of PHOTOGRAPHY, 48, Newgate-street.—At this Institution the art of taking portraits and landscapes may be learned, and the necessary apparatus purchased for 5*l.* No charge is made for instructions.

COMPETITIONS.

TO ARCHITECTS

THE COMMITTEE of the SHEFFIELD SCHOOL of ART being about to ERECT a NEW SCHOOL, have determined to offer a premium of Fifty Pounds for the best design out to COMPETITORS, and have invited architects to send in plans, elevations, and sections complete. All designs are required to be on the same scale, namely, one eighth of an inch to a foot, and must be sent in on or before the 21st of DECEMBER next, addressed to the Honorary Secretary of the School of Art, Sheffield. Competitors are requested to put a distinguishing mark or motto on their designs, but not to attach their names. The letters accompanying the plans to contain the name of the competitors, but the letters of the successful competitors only will be opened. The architect who shall produce the design which shall have the premium of the building, and the second best design will receive a Premium of Fifty Pounds. No plans will be received in competition which cannot be carried out for a sum not exceeding Four Thousand Pounds. For plans of the ground and particulars of requirements apply to the Honorary Secretary, Sheffield, or at the Office of "The Builder," No. 2, Brett's-buildings, Fetter-lane.

By order of the Committee,
BENJAMIN WRIGHTMAN, Honorary Secretary,
Sheffield School of Art.

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS

DONCASTER CEMETERY.—The COMMISSIONERS are desirous of receiving DESIGNS, GROUND PLANS, ELEVATIONS, and detailed ESTIMATES, for the LAYING OUT as a CEMETERY or BURIAL GROUND, the land selected for the site, containing about seven acres and a half, and fenced as follows:—Two Chapels, apart from each other, with Lodge and Entrance Gates. The whole cost not to exceed 1,000*l.* The plan and levels of the ground may be inspected at Mr. ALEXANDER'S office, in St. George-gate, and a premium of 10*l.* will be awarded for the design which may be approved. The designs and estimates with motto are to be addressed "To the Commissioners of the Doncaster Cemetery," under cover, to their Clerk, on or before the 11th day of NOVEMBER, 1854.

T. B. MASON, Clerk to the Commissioners.

St. George-gate, Doncaster, Oct. 19, 1854.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

THE BURIAL BOARD of BURY ST. EDMUND'S are desirous to be furnished with DESIGNS, PLANS, and ESTIMATES for LAYING OUT as a BURIAL GROUND the Tenant's half Lires of Land situate to the west end of Fieldgate-street, purchased for the new Cemetery, and for the chapels, lodges, entrance-gates, and fences, &c. The lodge to comprise an office, and sufficient accommodation for a resident keeper of the said ground. The designs, &c. must be examined in all respects and delivered sealed to the undersigned, under cover, addressed to the Chairman of the Board, on or before the 3rd day of NOVEMBER next. Those not accepted will be returned, and a premium, &c. approved, to the proprietors of the Board. The successful applicant will, at the request of the Board, either have the superintendence of the works at a remuneration of five per cent. on the money finally expended, or be paid for his plans, sections, and estimates. Permission to view the land can be had on application to Mr. EDWARD PRIOR, of the West Farm, Bury St. Edmund's. Further particulars can be obtained on application to

JOHN WILSON, Clerk to the Board.

2, Hatter-street, Bury St. Edmund's, 14th October, 1854.

TO ARCHITECTS.

NOTICE is hereby given, that the Tiverton Burial Board are desirous of receiving PLANS, SPECIFICATIONS, and ESTIMATES for Erecting upon their proposed rural ground, containing about 12 acres, Two Chapels, a Sexton's Lodge, Board-room, and Entrance-gates. One of the chapels will be erected upon the consecrated, and the other upon the unconsecrated, portion of the ground. The latter will pass the party walls, open sheds, and estimates may be received, according to the provisions of "The Burials Act, 1853." The Board intending to offer a PREMIUM of SIX GUINEAS for such plans, specifications, and estimates. A plan of the ground may be seen at the Office of the Board, where printed forms of tender may be obtained, and further information obtained, at my Office, by all parties intending to send plans, specifications, and estimates are requested to forward the same to me, the undersigned, under sealed covers, indorsed "Tiverton Burial-ground Plans, &c." on or before SATURDAY, the 4th day of NOVEMBER next.—By order,

R. GRANT TUCKER, Clerk to the Board.

Dated Tiverton, 16th October, 1854.

CONTRACTS.

TO CONTRACTORS.

Royal Engineer Office, Chatham, 5th Oct 1854

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall Mall, London, on or before THURSDAY, the 26th day of OCTOBER, 1854, from persons desirous of CONTRACTING with the Honorable Board of Ordnance for BORING for a better supply of WATER, in the ordnance well, at Sheerness. Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Sheerness, between the hours of TEN and FOUR, till the 23d of OCTOBER, 1854, Sundays excepted: The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of 200*l.* for the due performance of the Contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall Mall, London, and to be delivered free, endorsed "Tender for Works at Sheerness." No Tender can be admitted after the said 26th day of OCTOBER, 1854. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

TO CONTRACTORS.

Royal Engineer Office, Chatham, 5th October, 1854

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before THURSDAY, the 26th day of OCTOBER, 1854, from persons desirous of contracting with the Honorable Board of Ordnance for providing a well and STORE ACCOMMODATION at the Royal Engineer Field Work Depôt, St. Mary's creek, near Chatham. Plans, and specifications of the works are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR till the 23d of OCTOBER, 1854, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of 1,000*l.* for the due performance of the contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham." No Tender can be admitted after the said 26th day of OCTOBER, 1854. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

PERSONS desirous of TENDERING for the ERECTION of a new HOUSE and PREMISES, on the site of the Swan Inn, Maidstone, for Messrs. Paine, Dunden, and Co., are requested to deliver their Tenders for the same at or before TWELVE o'clock of WEDNESDAY, NOVEMBER the 1st, at the County Surveyor's Office, Maidstone. Plans, specifications, and quantities may be seen at the office of the Surveyors of Messrs. ASHPITEL and WHICHCORD, 2, Pratt's-corner, Westminster Abbey, every day after the 16th, between the hours of TEN and FOUR o'clock. The lowest Tender will not necessarily be accepted.

LEVEL of WALLAND MARSH.—To CONTRACTORS, BRICKLAYERS, CARPENTERS, and OTHERS.—The Commissioners of Sewers for the Level of Walland Marsh and Elderbush Banks, in the counties of Kent and Sussex, are prepared to receive TENDERS for the CONSTRUCTION of a new TIDAL PEN, with brick frames, TIDAL BASIN and TIMBER GUP, to be long at the outfall of the Walland Marsh Artificial Drain in the parish of Broomhill, situate between Rye and Lydd. Drawings, specification, and terms of contract may be seen on application to Mr EDWARD TERRY, Lydd, Kent, who will be in attendance at the Town Hall there every MONDAY, WEDNESDAY, and THURSDAY, from ELEVEN until TWO o'clock, after which OCTOBER inst. and will supply parties with the form on which Tenders are to be made out. Tenders will be accepted for the constructing and laying down of the two frames separately, or the whole upon both frames, as separate bodies. Preference will be given to such contracts as embrace the entire work. A correct bill of quantities may be obtained on application to Mr ROBERT CLARKSON, Engineer and Surveyor, Newcastle-upon-Tyne, of whom all further particulars of the works may be had. Each Tender must be accompanied by the name of two responsible persons willing to become bondsmen for the due performance of the contract, and the bond will be prepared for execution by the parties whose Tenders are to be accepted. Tenders will be received by the undersigned, addressed to the Chairman of the Board, at the Office of Messrs. ASHPITEL and WHICHCORD, 2, Pratt's-corner, Westminster Abbey, every day after the 16th, between the hours of TEN and FOUR o'clock. The lowest Tender will not necessarily be accepted.

THOMAS HOLLOWAY, Clerk to the Commissioners.

Office of the Commissioners of Sewers, Rye, Sussex, 16th October, 1854.

TO STONEWARE PIPE MANUFACTURERS and others.

THE DIRECTORS of the BURY and RADCLIFFE WATERWORKS COMPANY are prepared to receive TENDERS for the furnishing of 2,250 yards of GLAZED CIRCULAR STONEWARE PIPES, 9 inches in diameter, with the necessary bends, &c. and for the carriage and tramportation may be obtained at the Offices of Messrs. MAWSON, Town Hall chambers, Manchester-road, Bury, and at the Works, Woodhouses, Radcliffe, adjoining Ringley Bridge, dressed to me, at my Office, Bury, on or before the 30th instant. By order,

J. G. BURY, October 10, 1854.

TO BUILDERS, CONTRACTORS, and others.

CONTRACT for TENDERS.—Persons desirous of ENTERING into a CONTRACT for making a RAILWAY from Ludlow to Craven Arms, and thence to the Stiperstones, in the county of Salop, are requested to meet at the Castle Hotel, in the town of Craven Arms, on MONDAY, the 30th day of OCTOBER instant, at the hour of 12 o'clock at noon precisely, when and where the Engineer will be present to explain the nature of the works, and to receive Tenders for the same. Plans and sections of the line will be deposited at the Office of the Engineer, No. 3, Westminster-chambers, Victoria-street, Westminster, on and after the 23rd instant, where forms of Tender may be obtained. Tenders will be received by the undersigned, addressed to the Chairman of the Board, at the Office of Messrs. ASHPITEL and WHICHCORD, 2, Pratt's-corner, Westminster Abbey, every day after the 16th, between the hours of TEN and FOUR o'clock. The lowest Tender will not necessarily be accepted.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hitherto been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast, or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTU

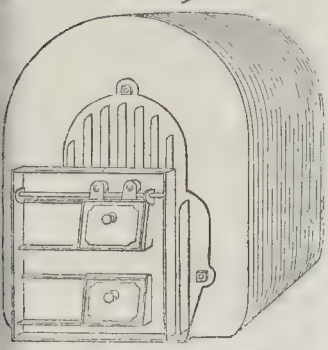
ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DE

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY T

OF THE METAL.



It possesses all the Advantages of Galvanized Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their great appearance, and the extremely little trouble required as well as the small expense for their maintenance, make for each of them numerous Many roofs covered with Zinc, especially on the continent, have remained under the best conditions of this metal till the present time, without the necessity of, or even a question, requiring any repairs.

CERTIFICATES of the proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Sole Agents,

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Softness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc sustains and supports the Lead so as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge	weighs	about	18 oz.	per foot super.
No. 12	"	"	"	20 oz.	do. do.
No. 13	"	"	"	23 oz.	do. do.

(LATE JOHN H. PORTER),

IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON.

(IMPROVED PROCESS.)

JOHN EDMONDS and CO.

WORKS.—GLASS HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET IRON and WIRE of every description, superior in all respects to that produced by any other process, THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process) Works at the Regent's canal basin, Commercial-rd. East, and 9, Crosswall, London.—J. SKAIFE supplies this Metal in every Form, Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Gutters, Rain-water Pipes, Troughs, Cocks and Water Pipes. Hipping, &c. Furnaces, Baths, Buckets, &c. all made and galvanized. Every description of Sheet Iron Work executed. In these works, &c. kept ready Galvanized. Estimates and drawings for roofs and buildings fixed complete.—J. SKAIFE.

JACKSON and COOK, Manufacturers of CORRUGATED IRON ROOFS and BUILDINGS, Architects, Builders, and others, are respectfully informed that the property of iron as manufactured by them for lightness, cleanliness, durability, and cheapness, is fully established, being fire-proof. Drawings and Estimates forwarded by return of post. Island Foundry and Works, Belvedere-road, Lambeth.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 300,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILEVE, French Engineer, 58, King William-street, City.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; WARM AIR APPARATUS, &c.—Apply to S. S. TAYLER, Engineer, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S ROAD, CHELSEA. HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan 14, 1854, which fully bears out the able address of the Rev. H. J. Boge's delivered at a meeting of the Architectural Society, wherein Mr. Bage shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its work ing, produces perfect ventilation with a soft and comfortable warmth throughout the heated buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Counters, Shops, Warehouses, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

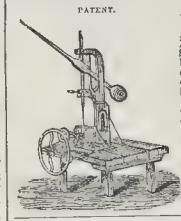
Prospectuses and Estimates may be obtained on application to SYLVESTER and CO.

Engineers, and Manufacturers of Heating Apparatus, 36, Great Russe l-street, Bloomsbury.

SMOKELESS DOMESTIC FIRE-PLACES. RAWE'S PATENT STOVE is a novel and successful improvement in domestic fire-places. It combin s the cheerful open fire and external appearance of the best register, with complete prevention of smoke. Saving of fuel is consequent to be 30 per cent.—Further information may be obtained of J. RAWE, Chesnut-tinge, Haverstock-hill, Hampstead, where the stove may be seen in use any day from Four to Eight p.m. Licences will be granted.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 12s. to 42s.; Ornamental from 31s. 6d. to 10 guineas—for warming halls, passages, greenhouses, watch-boxes, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c. 234, Oxford-street, and at the City Depôt, 119, Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat irons. This stove irons, with perfect cleanliness, for twelve hours, with one shilling's worth of coke or cinders. Price 12s. "down." Prospectuses, with Drawings and Report, forwarded free.

To try the SMOKE-CONSUMING STOVE, invented and applied by Dr ARNOTT, and explained by him at the Institution, on WEDNESDAY, MAY 3, illustrated performance.



BRISTOL Vannish fuel, requires much less attention than the ing of this stove, and produces by the use of Dr. Arnott's Circular Valve, a perfect system of Ventilation. Rooms heated by D and E. BAILEY, 72, Holborn

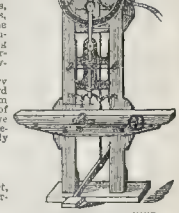
factur ers have never from PARLIAMENT.—ore, and being satisfied with the ANGES and BATHS, in centage of profit proprietors of the mine from 7 to 8 per cent. several hundred tons a week, and FEERIE'S celebrated Hartlepool has been fixed as the supplies.—See testimonies factory, New-road,

PATENT.

BUILDERS will find this the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour. Can be had only at WEBB & GREENWAYS, Steelhouse-lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener, Gothic Pattern Casement, and other Window Fastenings, Double-action Floor Door-springs, Cupboard Turns, Barrel-bolts, Patent and other Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to both by the Great Exhibition in these celebrated Machines, London, and many scientific Institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

POWER MORTISING MACHINE.

Sold only by WILLIAM FURNESS, Patentee, No 2, Lawton-street, Liverpool, from whom full particulars may be obtained.

TO SAW MILL PROPRIETORS AND OTHERS

A VERY powerful self-acting RACK-SAW BENCH, for timber, planed iron table, 7 feet 2 inches by 1 foot 10 inches, with guide, spindle, two-motion conical rigger, and line wheel, cast-iron rack, 45 feet 8 inches long, with iron plate, twenty-five sets of iron rollers and standards, five-motion line wheel in spindle and pinion, clutch, with lever, gut-lines, cast-iron frames, and apparatus.—Apply, by letter, to J. H. S. 14, Hambley place, Lower-road, Rotherhithe.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne
1a, Strand, London.
65, Hyde-park-street, Glasgow.
27, Duke-street, Manchester.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for carriages, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletree, sugar-mills, &c.

CHUBB'S LOCKS & FIREPROOF SAFES

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,

"Liverpool, May 17, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door. I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 23, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Box-staples and Striking Plates, Fire proof Safes, Deed and Cash Boxes, Copping and Lever Presses. Descriptions and lists of prices may be had at the Depôt, 52, Strand, gratis.

STREET-DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICKLOCKS, FIFTEEN SHILLINGS EACH.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBBYER (late STURGIS and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London. Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus. Gas works erected complete. Manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

COTTAM'S ENAMELLED MANGERS.—These Mangers are universally approved of, they obtained the Great Exhibition Prize Medal, are constructed in the best possible manner, and have all the latest improvements. Registered and Patented. Every article in Stable Furniture on show. COTTAM & HALLEN, 2, Winsley-street, Oxford-street, London.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patented invention of this description.

Manufacturer of KITE'S Patent Cast-iron Smoke-curing Chimney Caps. 150 of this principle on Buckingham Palace. Price 33s. each.—JAMES BARTON, Iron Founder, Smith, &c. 370, Oxford-street, a few doors east of the Pantheon.

THE PATENT NAIL and SPIKE COMPANY invite the attention of Ship and Barge Builders, Colliery Owners, Railway Contractors, Shippers, and Consumers generally to their PATENT MACHINE FORGED IRON NAILS and SPIKES, which possess properties fully equal to hand-made anvil nails, and far surpass those of any machine-made nail yet offered to the public. They are made of the best Staffordshire iron, complete at one operation while red-hot; they are full under the head, and being brought with a proper taper to a chisel point they can be driven without boring, they will clinch, and the heads cannot be twisted off.

Lists of prices, with patterns, &c. may be had on application at the works, No. 9, Summer-street, Southwark-bridge-road.

NAILS and IRONMONGERY from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES a complete LIST of which will be forwarded upon application. FREDERICK BUTLER, Nail Manufacturer and General Dealer, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

THE ALBERT ASSURANCE COMPANY.
(Established in 1838.)
MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security. — EASTERN BRANCH, 7, Finsbury square. W. S. VARDY, Manager.

ANNUAL DIVISION OF PROFITS.
GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.
THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman,
Deputy-Chairman.

Colonel Michael E. Bagnold.	William Morley, esq.
Francis Brodigan, esq.	Robert Frances Power, esq. M.D.
Alexander Robert Irvine, esq.	Archibald Speng esq.
John Inglis Jerdein, esq	Frederick Valiant, esq.
James John Kinloch, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own unquestionable superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policyholders participate in profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1854, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that the Assurances in 1853 considerably exceeded the se effected in any previous year, the number of Policies issued being more than 400, and the annual income thereon being upwards of 7,500l. It also appeared that, ex cept in 1849, when the visitation of the cholera took place, the claims arising from deaths were, in every year, much below the e estimated amount.

The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 33½ per Cent. should be made in the current years Premium payable by all Policy-holders now entitled to participate in the profits.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 33½ per cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 8	14 6 0
30	1,000	25 13 4	8 1 8	17 11 8
40	1,000	33 18 4	10 12 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	75 17 6	23 18 0	51 19 6

A. R. IRVINE, Managing Director.
14, Waterloo-place, London.

NOTICE.—DIVISION OF PROFITS.—All Persons assuring their Lives on the Participating Scale in the PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE OFFICE, before the end of the present year, will be ENTITLED to SHARE in the next Quinquennial Division of Profits to December 31, 1857.

Bonuses paid in Cash, or added to the Policy, or applied to Reduce the Annual Premium, at the option of the Assurer. The great and continuous increase of business, and the extremely favourable rate of mortality among their assurers, fully justify the Board in confidently anticipating a still further improvement upon the liberal amounts formerly declared by way of bonus.

For Prospectuses, showing the peculiar advantages of the Association, and for all further information, apply to the local agents, or at the Chief Office, 15, Moorgate-street, London.
WM. TIDD. LINFORD, Secretary.
October 21, 1854.

PLATE-GLASS INSURANCE.—The Directors of the ATHENÆUM FIRE OFFICE are now prepared to issue policies for the insurance of Plate Glass against damage by breakage

The necessity for insuring this kind of property is generally admitted, and in addition to the advantage arising from the large capital and prompt mode of settlement always adopted by the Athenæum, the scale of premium is so moderate as to present no obstacle to a universal adoption of their policies.

Applications for agencies, accompanied by references, to be made to the Manager, 30, Sackville-street, Piccadilly, London
HENRY SALTER, Manager.

GOOD FOREIGN SHEET-GLASS, in cases of 200 feet each; average size, 10 by 20, at 32s. 36s. and 40s. per case; ground ditto, 32d. per foot; crown and sheet squares, in 100 feet boxes, from 14 by 10 to 22 by 14, 2d. per foot; 4-inch round British plate tiles, 11s. per dozen; also, crown and sheet glass, in crates; British and patent plate, fluted and stained glass slates, &c. The new Ruby Sheet, the best for embossing, from 1s. 3d. per foot
All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, conducted in connection with his Manufactory, Broad-street, Birmingham. Established 1807. A large assortment of glass chandeliers for gas of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling houses and offices where cleanliness and freedom from smell are the first importance. They are simple and inexpensive, and may be at the Works in a variety of forms adapted to the style of fi or the taste of purchasers; also at Mr. JOHN SHORT Crispin-street, Spitalfields, London.

NOTICE to INVENTORS.—Ne Law—PATENT OFFICE, 4, Trafalgar-s tions, may be had gratis by applying pre paid, to Messrs. PRINCE and CO.

DWELLINGS FOR THE WORKING CLASSES.—The Worcester Association for erecting improved dwellings have commenced active operations, and at the outset was not merely to erect a few Tenements for the working classes, but to select Directors, and others, by their large assortment of Patterns of the latest description, would give them the opportunity of obtaining, at a moderate rate, healthy residences, free from nuisances and houses which engender disease. They have purchased a batch of land, in which Elizabethan and Gothic Dados, in many designs. Door-caps, immediately opposite St. Michael's Church, and have commenced the erection of Blocks of Houses to many varied intersections of all sizes, tracery and pan l hagen-street. The site is well adapted for the purpose, drainage and ventilation being perfect. The property has a frontage of 109 feet to Copenhagen-street, and a depth of 200 feet to the river; and a portion of the property has been let on a long stry-sl[illegible]

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only agent in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the public and those connected with the Marble trade that, having established an Office in London, the chief business of that department will be conducted by his son, Mr. A. FABBRICOTTI, at Carrara Wharf, Thames Bank, Pimlico, where he will carry on the marble trade solely on his own account. Mr. Thompson having no longer his agency.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well known qualities of Mr. Fabbricotti's marble are celebrated for the whiteness, freedom from stain, and uniformity of grain, and are known to the trade as the "Carrara Statuary," "Veined Statuary," "Sicilian," "Dove," and "Black and Gold" Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by Mr. Thompson, to the Offices of the Proprietors of the Carrara Marble Quarries, at Carrara Wharf, Thames Bank, Pimlico, where he will in future carry on the marble trade solely on his own account. Mr. Thompson having no longer his agency.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well known qualities of Mr. Fabbricotti's marble are celebrated for the whiteness, freedom from stain, and uniformity of grain, and are known to the trade as the "Carrara Statuary," "Veined Statuary," "Sicilian," "Dove," and "Black and Gold" Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and have consequently the can supply the trade with the FINEST MARBLES at the LOWEST PRICES.

Just arrived, per *Roberts, Ethan Allen, Nathaniel, and Hero*, about 150 Blocks of Marble, and 1,000 feet of Sawn Slab, Mottars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for sale on consignment. The Marble Wharf, Thames-bank, Pimlico adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Grits, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Lath, and Fire Goods. WOODMAN and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Slegs, Landings, &c. cut on the shortest notice. Country orders promptly attended to

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 5, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to call the attention of masons and the building public generally to their extensive assortment of veined, Sicilian, and statuary marble, in slabs and block, at prices never before offered. JAMES SIMMONS, Manager.

ITALIAN and GALWAY MARBLE QUARRIES, Depôt, Whitehall wharf, Parliament-street, Westminster.—Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, &c. that he has just landed in the St Katherine's Docks, ex *Roberts* and *Ship*, from Leghorn, a cargo of MARBLE, consisting of large open statuary, suitable for sculptors, Sicilian veined statuary, grand, dark, Pardilla, &c. Also at his depôt may be found 100 blocks of marble, consisting of open statuary, Sicilian, Italian, black and gold, Galway block and St Anne's and 2 different coloured marbles. A large stock of sawn slabs of every description of marble.

ITALIAN and GALWAY MARBLE QUARRIES, Depôt, Whitewall Wharf, Parliament-street, Westminster. Now landing Twenty Blocks of large Statuary, suitable for Sculpture, &c. some veined ditto.

Fifty Blocks of good Vein and Sicilian, &c. &c.

Also best Cargo of Galway Black Marble, in blocks and slabs of large dimensions.

Apply to Mr. FRANKLIN, Proprietor of the Quarries.

TO SCULPTORS, MASONS AND BUILDERS.

MESSRS. BRINE (BROTHERS) beg to inform all consumers of Marble, that they have entered into contract with Count LAZZ. NI and SONS, Carrara, for the PRODUCE of their QUARRIES, which are known to be the finest in Italy, and the first two cargoes, consisting of Statuary, Vein, and Sicilian, are now unloading at their Depôt, Great Northern Wharf, Canal-road, King's-cross, from which may be found marble slabs of every description, sawn by their powerful machinery. H. W. WILKINS, Manager.

BUILDERS, &c. &c.—Take notice of the extraordinary reduction made in the price of marble work. A Vein Marble Fox Chimney piece, including a neat Stone, only 11 12s. A wood-and Vein Marble Cornice piece, with caps and bases in plain slabs, up in three days, and forms a very elegant Stove, 2 0s. Terms, net cash. A whole house supplied; large statuary carved chimney pieces on view, from 20s. to 50l. each. Westminster Marble Company, Eaton-street, Millbank.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS PARKES begs to call the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and Belgian marble, and with that careful attention to the details and finish as necessary in good marble work. The Stock consists of 50 Drawing Room Chimney Pieces in statuary Marble and gold, 50 ditto ditto in Black, Black and Gold, Bardilla, Verd Antique, Brocatella, Dove, St Ann's, and Serpentine; suitable for Dining-Rooms, Libraries, Vestibules, and evening re-fills; and a great variety of others in Veined, Sienna's Red and Amber Marble, for Bed and Breakfast-

BRISTOL Aged secondary Bed-Rooms, &c.; also, Monuments, ing of this sort; the whole executed from the most classical Rooms Rated Designs. The varieties of the finest Italian and British of D. White, the B remunerative price.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depôts, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

RAWDON-HILL and NEW-PARK SPRING STONE.
BRAMLEY FALL AND POTTERNEWTON STONE.
HARD WOOD GRINDSTONES.
SAMUEL TRICKETT, STONE MERCHANT.

Prices and samples from shed. Delivered to any part. Address VICTORIA STONE WHARF, ISLE OF DOGS.

CAEN and AUBIGNY STONE.—P. POTCHARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port of the kingdom taken for any quantities. Depôt: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Town-hall.

BATH STONE DEPOT, BOX STATION.—ROBERT STRONG, STONE MERCHANT, Box, Wilts. Box for rail Stone, Scalleit Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stone work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney pieces, Tombs, &c. &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street, Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen, Normandy, and Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Grinate, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transshipped, or carted with despatch, and on moderate charges.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below that of other stones in blocks and ashlar of specific dimensions and fine scappled; also random and coarse rubble. It is easily worked to good form and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.

MONUMENTS! MONUMENTS!—For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe New-road, London.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Doncaster, Paramouth Barracks, and are kept in stock in large quantities by Messrs. FIRKIN, Millbank-street; also by Messrs. Sharpe, Tooley-street, and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 39 and 40, Upper Belgrave place, Pimlico.

TO STONE MERCHANTS AND CONTRACTORS.

FREE-STONE QUARRIES TO BE LET on lease, situated on the east coast of Scotland. The quarries have been long worked, and are among the principal ones in the north of Scotland. They are now in first-rate working order. The stone is well known, and commands an extensive sale in this country and abroad. There is no land carriage, and ships of a heavy draught can load at the quarry pier.—For specimens and particulars, apply to Mr. H. SMITH, 25, Southampton-buildings, Chancery-lane, London, before November 30.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sinks, &c. &c. at the lowest wholesale prices. N.B.—No charge made for supplying to dimensions. Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

The Builder.

SATURDAY, OCTOBER 21, 1854.

ROUND about Worthing, in Sussex, there are several particularly interesting early churches,—Sompting, Broadwater, Southwick, and Steyning, besides those of Old and New Shoreham, before now referred to in our pages; and we were once led to reproach the loungers at Brighton for not finding them out more often than they do, and so introducing a little novelty into their day's amusement, and getting a few fresh ideas suggested to them. A few fresh ideas! What a boon for some of them. But never mind that just now. Sompting Church, in particular, must be regarded as one of the most interesting relics in the county, taking us back to the time when the Saxon chieftain, Ella, landed here with his three sons, drove the Britons into the great Weald of Kent, which stretched into this county, and afterwards assumed the title of King of the South Saxons, or of *Suth-Sex*. At that time (the fifth century), Ella was the preponderant Saxon chief in England,—superior, according to Sharon Turner, to Hengist. For some years after this, however, the Britons held their own, and made a vigorous defence. As the bard Taliesin sings in his simple strain, of a battle whereat he was himself present, in the following century,—

"Neither the fields nor the woods gave safety to the foe,
When the shout of the Britons came
Like a wave raging against the shore—
I saw the brave warriors in array;
And after the morning how mangled!
I saw the tumult of the perishing hosts;
The blood springing forward and moistening the ground."

Again and again, however, they had to sing, with Hrothgar, in the Anglo-Saxon poem on Beówulf:—

"What are the designs
of this mail-clad host,
that thus have brought this warlike ship
over the streets of the sea?
Come they hither over the ocean,
injuring everywhere the settled people?
The land of the Danes
holds nothing more odious
than ship-plunderers."

We do not mean to say that Sompting Church is quite as early as Ella, but it unquestionably belongs to Saxon times, probably to the ninth or tenth century, and so it carries the mind on. It seems clear that in the latter years of the Saxon domination that people had stone buildings of size and importance, and were little, if anything, behind the Normans in skill. A Saxon hall and Saxon church differed little from a Norman hall and Norman church. Saxon illuminations show this, and in the Anglo-Saxon poem already quoted, we hear of a hall ornamented with pinnacles, and of a steep roof with gold adorned. We might go on farther in this road, but should get away from our immediate object. Sussex, however, is still a peculiarly Saxon part of England: look at the eyes and hair of the people for evidence: and it is a curious circumstance, as noted by poor Hudson Turner, that of forty-nine castles enumerated in the Domesday survey, that of Arundel is the only one said to have been standing in the time of the Confessor.*

There is the more reason to go and see Sompting church just now, because it is about to be restored; and, with all confidence in the architect to whom it has been confided,—Mr. Carpenter,—it is impossible to tell what changes necessity or circumstances may make during the operation. We were told very positively in Brighton, by one who "had seen it," that the church had all been pulled down except the tower; so the next morning we posted off to see what was left, uttering inwardly many mild protests against such a mode of dealing with the handwriting of past times. A clear-headed excellent friend who was with us, is in the habit of saying that inexactness, looseness of statement, is one of the great vices of the day; and so it is; and so it has been for many days. "Nothing," writes Dr. Johnson, in some remarks to Warton (quoted by Mr. Cunningham, in his new edition of the "Lives of the English Poets"), "nothing but experience could evince the frequency of false information, or enable any man to conceive that so many groundless reports should be propagated as every man may hear of himself. Some men relate what they think as what they know; some men of confused memories and habitual inaccuracy ascribe to one man what belongs to another; and some talk on without thought or care!!"

We were glad to find this inexactness prevailing in the statement as to Sompting Church. The roofs have been taken off, and are being reinstated, but the walls are untouched, and, as we are told, will remain so. Nearly every one knows, either from prints or otherwise, the appearance of this curious tower, with its four pointed gables at the top, whence rises the short spire, its quoins of "long and short work," the shaft in the centre of the faces of the tower, and small openings with angular heads. The arched opening in the east wall of tower into the nave with the carved capitals and sort of impost with boldly cut scroll upon it, more Roman in character than Norman, is a prominent feature. It is a cross church, consisting of a long narrow nave and chancel (in the whole, 77 feet long and 14 feet 9 inches wide), without aisles, and the transepts are 65 feet across, with an aisle on the east side of them. It seems probable that it was originally constructed simply as a long parallelogram, with its present peculiar and ancient tower and spire at the west end, and that both transepts are subsequent, though, perhaps, immediately so, to the reconstruction, or more probably merely alteration, of the nave in the Norman period, and that they were erected for different purposes. The north transept, together with the nave and the chancel, appear to have been exclusively retained for the use of a community, and to have had altars in each of the bays of the aisle on the east side. A wide semi-circular arch seems to have been opened to form a communication between this transept and the nave at a more recent period. The south transept, it is imagined, was built for and used as the parochial church; and until the last fifty or sixty years there was no communication, we are informed, between this transept and the rest of the church, but through a small doorway situated towards the south-west angle of the transept. Examination has shown that the pavement of the south transept was originally about 2 feet below the nave. The font is in the position of the ancient parochial altar, and adjoining the little chancel is a small chamber, which may have served as a sacristy for the parish priest, and appears to have had an external entrance. The architect has avoided disturbing the old work as much as possible; and beyond pointing up the masonry of the tower it will remain as hitherto, with its ancient plastering undisturbed. The spire is being recovered with oak shingles. There are not sufficient funds to put in new windows, so the Perpendicular ones must remain for the present.

The extreme east end of the chancel has some very curious features, which have never been alluded to by those who have described the church. These include an angular-headed piscina, a credence, two singular panels in the centre of the east wall, with carved interlacings under them (like some on early Irish crosses), and a recess on each side of these with rudely sculptured ornaments, the whole, as it seems to us, of the same date as the tower. The latter is constructed of flint and rubble, with dressings of Selsey rock, and some admixture of Caen stone. In the chancel there is a string-course, also of Selsey rock. It is greatly to be hoped that no attempt will be made to restore these very curious recesses and panels in the chancel, but that they will be simply repaired and maintained as they are,—the rude characteristic markings of a remote period—a period unquestionably previous to the coming of the Norman. Long may Sompting stand to remind us of Alfred and our earliest freedom.

At Broadwater Church also, the masons are at work putting in a new east window, but what is to be the result we will not pretend to say, especially as the builders are not working under any architect. This is a cross church, with a transitional Norman tower at the junction. Other parts of the building are Early English. The chancel arch is Norman, very richly ornamented, with a strong Byzantine impress. The opposite arch into the nave is also richly ornamented with Norman mouldings, but is pointed. Whether originally built so, or changed subsequently, was not clear on a superficial examination.

The pretty girl with the sunny face, who was so hard at work rubbing the brasses here—very good ones they are, too—may like to know that the Latin inscription under the beautiful cross-fleury, which says, "Here lies John Corby, rector of this church, who died in 1415," does not rightly belong to it. Dallaway says it was probably intended for Richard Tooner, rector from 1432 to 1445. The second brass includes a beautifully-engraved figure, under a canopy, to John Mapilton, who died in 1432.

Amongst the many noticeable points in this church is an elaborate sixteenth-century altar-tomb of mixed style to Thomas West, Lord la Warre, and the sedilia, which are Norman. In a modern altar-tomb in the churchyard to William Marter, surgeon (1853), encaustic tiles are introduced around the sides with novel effect.

In Steyning church the father of Alfred the Great is said to have been buried, an evidence of its early foundation. From *stean*, a stone, the Saxons called the place Steningham, and now we have Steyning. Only the nave of the ancient building remains, and this is Norman in its salient features: it is of noble height, and proportions,—worth a journey. The columns of the arcade separating the nave from the aisles are large and lofty: the capitals, together with the mouldings of the semi-circular arches which they carry, are different in every case, and very handsome in all. The wretched galleries put up about twenty years ago, ought to be taken down forthwith. Externally, it will be seen that the clearstory on the north side of this church is much less ornamented than it is on the south, the windows having simply plain sinkings around them, instead of columns and mouldings, as on the other side.

To get from Sompting to Steyning you must cross the high ridge of chalk hills known as the South Downs, and if you would fix a more poetical association in your mind with these grand, far-spreading, undulating, grass-clad hills than good mutton, leave your vehicle and tramp vigorously to the top of Chanctonbury Ring, which rises some 800 feet above the sea, and commands a glorious view of a fertile country. Never mind if it seem to get more distant as you approach: stride determinedly towards the clump of trees on its summit, now lost in the undulations of the surface and again appearing where you scarcely expected to see it, and then, when you have gained the height and looked around, if you love nature, you will think the delight cheaply purchased. At this

* "Domestic Architecture in England."

moment the varied tints of the foliage increase the charm of the view:—

> "There is a beautiful spirit breathing now
> Its mellow richness on the clustered trees,
> And, from a beaker full of richest dyes,
> Pouring new glory on the autumn woods."

Into what a dream might we fall here, recalling the whole course of England's history and progress. On this height have stood the Briton, the Roman, the Saxon, and the Norman. The great Alfred, who resided in the county, may hence have contemplated the destiny of the country he loved so well. And listen! In fancy,

> "Solemnly, mournfully,
> Dealing its dole,
> The Curfew Bell
> Is beginning to toll."

Generation after generation has departed, having performed its allotted task in the mighty and mysterious scheme. Dynasties and peoples have passed away. The Hills remain.

ON SEPULCHRAL BRASSES AND THEIR ART-MANUFACTURE.*

It will be understood that by the term "Brass," or "Monumental Brass," is implied a commemorative memorial of some person or persons, *engraven* either upon a rectangular plate of metal or upon several pieces of similar metal, cut out to correspond with the outlines of the design,—the incised metal being in both cases affixed to a marble or stone slab, so placed as to form a part of the pavement of a church, or occasionally elevated upon an altar-tomb.

The earliest example of these brasses of which we have any record was in the Church of St. Paul, Bedford, to Earl Simon de Beauchamp, who died before A.D. 1208: and the earliest brass of which the design has been preserved (by means of an engraving), was in France, and commemorated Philip and John, the two sons of Louis VIII. who reigned from 1223 to 1226. Thus, these incised monumental plates were produced in considerable numbers and brought to a high perfection more than two centuries previous to the discovery by the Florentine goldsmith, Mazzo Fuiequerra, of the art of engraving plates of metal for the purpose of producing *fac-simile* copies by means of impression. The same remark applies to the delicate and beautiful works in true line engraving, executed by artists who flourished at a far earlier period, for the decoration of the metallic hand-mirrors used by the ladies of ancient Rome. Engraving we must not omit to reckon amongst the arts of antiquity: had the ancient engravers applied the burnisher to prove their plates, they might have attained to the press. But it was appointed that many centuries should pass away before that mighty engine should be applied either to type or engraven plate.

In searching for the origin of commemorative works of this class amongst the monumental memorials in use at a still earlier period, we are led to trace the introduction of the engraven metallic plates in the first instance to the enamels of the continental artists of the twelfth century; while the greater durability of the metal, and its superior beauty also, to *incised monumental slabs* (to slabs, that is, upon the surface of which the designs were cut) would insure its favourable reception and extended adoption.

Venice appears to have been the channel through which, towards the end of the tenth century, the art of enamelling on metals was introduced from Byzantium into Europe. Works produced by this process were speedily employed for various purposes connected with the ritual of the Roman church; and they also were, occasionally, if not frequently, used for the purpose of monumental commemoration. For example, Stothard, in his "Monumental Effigies," has given an etching of an enamelled tablet now preserved in the museum at Mans, and formerly in the church of St. Julien, in the same place: this he ascribes to Geoffrey Plantagenet, Earl of Maine and Anjou, who died A.D. 1140. The unsuitableness of the delicate colouring material in the enamelled tablets to encounter that species of usage which monuments placed in the pavement of churches must be prepared to experience, would naturally lead to the introduction of works better calculated to resist attrition and casual injury; and hence the origin of the monumental brass, which, in its true character, was unquestionably laid down in many continental churches previous to its introduction into England.

Passing over without notice several arguments in support of the theory that brasses may be derived from the more delicate works in enamel which at an early period were occasionally employed for monumental purposes, I have to invite your attention to some brief remarks upon the monuments in use in our own country anterior to the introduction of brasses. These consisted, first, of upright crosses, adorned with various rude devices of interlaced work, sometimes intermingled with figures of animals: contemporary with these crosses were small stone tablets, bearing Runic characters: flat slabs of larger dimensions appear also to have been used at the same period. On all of these the devices and letters were produced, either by cutting lines into the stone, that is, by *incising* or *engraving* them, or by removing the adjoining portions of the face of the stone, and so leaving the designs and inscriptions themselves in *quasi-relief*. The great Christian symbol, the cross, appears incised upon some of the earliest slabs, doubtless with the view to denote the faith and hope of the deceased believer. Somewhat later, the cross, with its accompanying ornaments, were worked in true but still a low relief. And now the actual lid of the stone coffin becomes, in many instances, the monumental memorial; on other occasions, the large rectangular slab being still retained.

Shortly after the Norman conquest, monumental inscriptions fell into disuse; and about the commencement of the twelfth century, we find the first traces of attempts to give a representation of the person of the deceased upon either the lid of his stone coffin, or his sepulchral slab. These early effigies (introduced, probably, from the East through the medium of the Crusades, and originating, possibly, from a desire to enable the very coffin-lids which concealed from the survivors the forms once so dear to them, themselves to reproduce, as it were, and to perpetuate the lineaments of those forms as they were last seen "lifeless, but life-like," and habited as when yet living) were produced sometimes in relief, and sometimes by incised lines: the former method, however, appears at first generally to have prevailed,—the figures being wrought in very low carving,—and the desired effect not unfrequently obtained by such cutting away of parts of the surface of the slab as caused the effigial representation to appear rather sunk in the stone than raised above it. The time-worn memorial of one of the early abbots of Westminster (? A.D. 1114), now lying in the Abbey cloisters, affords an excellent example of such an effigy.

As, in process of time, monumental art steadily advanced, and effigies in full relief were produced by artists of no mean capacity,—so it became apparent, from the inconvenience and obstruction necessarily attendant upon the introduction of numerous monuments which would require to be raised above the pavement of churches, that, as a general rule, designs for monumental memorials should be expressed upon *flat* slabs of marble or stone. Thus, while, in comparatively rare instances, the altar tomb with its sculptured effigy continued in use for centuries, in the great majority of cases the coped coffin-lid gave way to the *flat* slab; and thus also both the monumental cross and the effigy came to be depicted by *incised* lines, instead of sculpture executed in relief. Such incised stones would also possess the recommendation of being obtainable at far less cost than similar memorials wrought by the sculptor's chisel; and, at the same time the designs thus engraven might (so far as an outline-process would admit), be identical with those adopted in more costly and elaborately wrought productions.

Still, to one most serious objection were these incised monuments generally exposed—the objection, that is, of being surely and speedily injured, if not actually obliterated, through the great and constant attrition to which, from their position, they would necessarily be subjected. This objection would not attach to *monumental brasses;* such being the hardness, and consequent durability of the plate prepared for their manufacture, that many of the earliest examples of these memorials yet in existence are still as essentially perfect as when first laid down. Brasses, accordingly, when once established in use, continued in favour for the purpose of monumental commemoration until the close of the Gothic era.

In our own country, very considerable numbers of brasses yet remain, many of them being in a state of preservation truly wonderful, when their age and the perils to which they have been exposed are taken into consideration, while others exhibit the effects of every variety of wrong and injury. Besides the brasses still in existence, a vast series of despoiled stones, from which their original brasses have been torn, give a sad testimony, both to the extensive adoption of these memorials at one period, and to the sacrilegious violence and spoliation to which they were subjected at another.

On the continent but few brasses have escaped; and these few are chiefly to be found in the churches of Belgium and of various parts of Germany. Several most interesting examples are preserved at Bruges and Ghent, and to Mr. Nisbett we are indebted for the discovery of other fine specimens at Cracow, Bamberg, Paderborn, Mecklenburg, &c.

With a solitary exception at Amiens, from the French cathedrals and churches, every vestige of a brass was swept by the fiery breath of the great Revolution. The despoiled stones (which, being available neither for copper coinage nor the manufacture of cannon, were permitted to remain), declare the splendour of the lost plates.*

Of the interest attached to slabs despoiled of brasses, and in many cases of their value, I shall have occasion to speak more particularly. I must now observe that the use of *incised slabs* was not discontinued subsequently to the introduction of the engraven plates or brasses, and particularly in those districts where marble and stone were most abundant: on the contrary, the two classes of *flat* memorials continued in use together. Contemporary examples of both exhibit many features in common,—the distinguishing characteristic of the brasses being, in almost every case, their higher degree of artistic merit. In both the brass and the incised slab the engraven lines were filled in with a species of mastic, generally black, but in some instances of various colours. Colour was also introduced into many brasses in broader masses, by means of a strong species of enamel. A remarkable example of this is still preserved in the azure tincture of the shield of Sir J. D'Aubernonn (A.D. 1277), at Stoke D'Aubernon, in Surrey, the earliest brass known to be now in existence. For the reception of this enamel, thin plates of copper were inserted in the brass, the brass itself being unequal to endure the degree of heat necessary for completing the process. White and ermine were also rendered upon lead or pewter, inserted for that purpose in the brass plate.

This brass plate, originally denominated "*latten*," was a compound somewhat resembling the brass now in use amongst ourselves, but more costly and far more durable than that alloy. It appears to have been manufactured exclusively on the continent, previously to the middle of the sixteenth century, and from thence imported into this country. In Flanders and Germany, and especially at the city of Cologne, this manufacture was carried to the highest perfection, as may be inferred from the special mention made in more than one existing contract of "*Cullen plate*"—the latten, that is, of Cologne.

Although the "*plate*" itself was not made at home until long after the decline of monumental brasses as works of art, yet we have every reason for believing that almost all the brasses which were laid down in English churches were the work of native artists; and, probably, even in the few instances in which the designs are

* The following paper formed part of a lecture delivered at the Architectural Museum, by the Rev. Charles Boutell, M.A. on Monday, Sept. 18th.

† In Spain, a single fine example is preserved at Seville.

French or Flemish, the actual engravers may have been Englishmen. This brings me to the consideration of the *designs* generally adopted in brasses, and also of certain peculiarities in their *treatment and execution*, which at once determine and facilitate their classification.

This first great distinction to be observed in the matter of *design* may be considered to have been ruled by the two general varieties of *form* in which the plate was used. In the *first* of these varieties the brasses were worked in one unbroken plate of metal, or (as in the case of the larger examples which sometimes measure about 10 feet by 5), in several plates so united as to present the appearance of one unbroken metallic surface. This was the Flemish practice; and in brasses of this variety the design (derived, apparently, like the form of the plate, from the enamelled tablets of Limoges) exhibits the effigy or effigies under a canopy, elaborately enriched with tabernacle-work, and with figures of saints and other personages in niches, the composition being surrounded by an inscription (the use of inscriptions was revived in monumental works about the period of the introduction of brasses), and beyond that of an ornamental border. The background was covered with a rich diaper, with foliage, or arabesque scroll-work; and it may confidently be added that the incised lines were filled in with colour. The diaper of the back-ground is generally continued between the shafts of the canopy and the inscription, thus imparting to the canopy and to the effigy beneath it the appearance of having been cut out in metal, and laid upon a carpet of gorgeous richness. This arrangement accords exactly with the altar-tomb and its effigy sculptured in relief.

Of brasses of this class examples were occasionally introduced into our English churches, of which a few are still in existence. Five of these,—the well-known brasses at St. Alban's, Lynn, Newark, and Topcliffe, in Yorkshire, must be assigned to the same artist, whose hand may also be traced in the relics preserved in the Church of St. Sauveur, at Bruges. A fragment of a sixth work of the same masterly hand is now in the national collection: it is, in my opinion, the finest specimen of these engraven memorials in existence; and I am much disposed to consider that it may be the remains of the companion work to the brass of Abbot Delamere, which once covered the remains of his predecessor in the Abbacy of St. Alban, at the foot of the altar-steps in their Abbey Church.

Other Flemish brasses may also be seen (their dates varying from A.D. 1370 to c. 1535) at Aveley, Essex,—Newcastle-on-Tyne,—Ipswich, in the Church of St. Mary Quay,—in the Church of All-Hallows, Barking, in London,—and at Fulham, in Middlesex.

The *second* chief variety in the *form* of brasses differs from the Flemish in this respect, that instead of the one quadrangular plate covered with the desired representation, the effigy, or cross, the canopy, shields of arms, inscriptions, and other devices, are each engraven on a separate piece of metal, cut out to correspond with the outline of the several details,—each piece being also placed in a distinct casement or indent of form corresponding with its own, sunk in the face of the marble or stone slab, which thus became the field or back-ground of the entire work. This is the method which was adopted by the English artists in the brasses which they produced; and I agree entirely with the author of the "Oxford Manual of Brasses" in considering that if the two methods be compared together, the preference seems to be due to the English. In looking at the Flemish brasses, "the eye is confused by the large and profusely ornamented surface presented to it at one view; whereas those of England, by their arrangement, preserve clearly the distinctness of the several parts, while the canopy and the surrounding marginal inscription sustain the unity of the design." I must add, that the slab itself to which the brass-plates are affixed contributes in no slight degree to the unity and completeness of the work as a composition. Accordingly, in taking rubbings, the slab should always be included, and shown with its engraven plates.

A few brasses yet preserved in England are evidently of foreign workmanship, notwithstanding that they are destitute of backgrounds; for example, the fine brasses to Ecclesiastics at Wensley, York, and North Mimms, Herts, are both of Flemish work; and the brasses at Minster, and at Horsemonden, in Kent, also those at Elsyng, in Norfolk, Horsheath, Cambridgeshire, and Oakham, Surrey, and the mutilated but still very remarkable brass to Margaret, Lady Camoys (1310), at Trotton, in Sussex, may be attributed to French artists.

I may here remark, that of the few brasses at present discovered in Germany, the majority coincide with the English usage, and are not on rectangular plates. The despoiled stones in the churches of France also show that very many of their lost brasses were, in like manner, executed on several pieces of metal, after the English method. At Constance Cathedral there is a brass to Robert Hallum, Bishop of Sarum, who died while attending the council held at that city, A.D. 1416: it is of English design, and there is a tradition that it was sent out from England.

On the other hand, many of the later English brasses, those especially which were fixed to the walls in our churches, were engraved on small quadrangular plates. In these examples, this form for the metal was, without doubt, adopted, in consequence of the custom which prevailed in the sixteenth century, of giving to the small brasses then executed a mural position.

Before the introduction of brasses, the designs which we have good reason for supposing to have been prevalent upon incised slabs, were crosses with (in some instances) marginal inscriptions. Effigies appear to have been less common. There was also a singularly interesting class of designs which obtained very generally in incised slabs, but which we do not find to have been adopted in more than a few instances by the engravers of brasses. These designs exhibit, with the monumental cross, and sometimes (but less frequently) with the inscription also, *a device indicative of the profession or occupation of* the deceased, such as a pastoral staff for a bishop or abbot, a chalice for a priest, a sword for a warrior, &c.

During the thirteenth and fourteenth centuries, we find that an attempt was made to combine the cross and the effigy upon the same monument, and in the same design. Sometimes the entire effigy was placed within the open floriated head of an elaborately enriched cross; or a bust or half-figure occupied a similar position; or the figure was so placed as to appear resting *upon* the cross. In other cases, the design was so adjusted as to convey the idea of the head and feet of the effigy being seen *through* openings sunk in the head of the cross, and at its base. And again, a half-figure is sometimes placed above the cross, the feet appearing below its base; or the feet are omitted from the design; or the half-figure is enclosed within a four-foil, and thus forms the complete design. From these curious and interesting slabs (which were worked in relief on the stone as well as incised), crosses having open floriated heads, and enclosing figures, were introduced into brasses: from the same source, also, we may apparently derive the demi-figures so common in brasses.

Several beautiful brasses remain with the floriated cross and the small enclosed effigy or partial effigy; but the greater number of these examples have fallen victims to the iconoclast; and their loss is the more to be regretted from the circumstance that, until after the middle of the fourteenth century, ecclesiastics and civilians were usually thus commemorated; and consequently we now possess but few examples of the costume of these classes, and particularly of civilians, during that period of our history.

In some of these floriated crosses a sainted personage is represented within the open-work at the cross head; or a figure of our blessed Lord is placed there; or the conventional group under which the Divine Trinity was symbolized in the middle ages. In these cases the figure of the person commemorated was placed at the base of the composition, or on one side of the shaft of the cross, or two persons appear one on either side of the shaft—all being in the attitude of supplication. The most remarkable lost examples with which I am acquainted are indicated by the despoiled slabs at Tormarden and Wootton-under-edge. In the former brass, within the cross-head, was the effigy of a knight holding a model of a church (thereby denoting his being a founder of a sacred edifice) of extravagantly large proportions: a small figure of an ecclesiastic knelt beneath a low canopy at the foot of the latter: above was a figure of the blessed Virgin, within a richly-foliated cross-head, the shaft of the cross being represented by the letters of the precatory sentence, proceeding from the hands of the kneeling votary, and the whole being enclosed within a border legend.

Crosses in brass are also found without any open floriated heads. In these examples the extremities of the arms are usually floriated. The Chichele brass at Higham Ferrers has at the ends of the four arms of the cross the symbols of the Evangelists, a figure of our Saviour being represented at the intersection in the centre.

The custom of placing effigies or semi-effigies within or upon crosses, and also above them, led to the adoption of "bracket brasses," in which the figure was placed upon a bracket, and generally covered with a canopy. The cross figure was thus lost. A few of these "bracket brasses" remain, but almost all of them are more or less mutilated. Remarkable examples are at Thame and Bray: others are at Great Brington, West Hannay, and Cobham. The Flemish brass at North Mimms, is also a "bracket-brass," the shaft and base being now lost. Two despoiled slabs in Lincoln Cathedral still give the design of remarkable examples of this class, in which figures of the Virgin, with the Divine Infant, were placed upon canopied brackets, and the effigy of the person commemorated was placed beside the shaft.

The effigies represented in brasses comprise an almost uninterrupted series of figures of ladies, men in armour, of various ranks; ecclesiastics also of various grades of rank, and civilians, from the time of Edward II. and Edward III. till the Reformation. The number of these figures is very considerable, and they are widely scattered through different districts, affording abundant facilities for reference, comparison, and illustration. They exhibit and illustrate with admirable exactness, the changes in armour and costume which were introduced and discarded during that long and eventful period: they exemplify the feelings, tastes, and usages of our ancestors, in almost every department of social and political life, in those days, from generation to generation: they furnish a graphic chapter on the rise, development, and decline of art (while literature had yet to become possessed of the steam-power of types and press), during times which men later born have, in supercilious ignorance, denominated the "dark ages." It need scarcely add, that they supply to the historian, to the politician, and to the artist, of our own time, information at once most valuable, interesting, and attractive.

ARCHITECTURE IN ENGLAND AS AFFECTED BY THE TASTE AND FEELINGS OF PAST AND PRESENT TIMES.

At the recent meeting of the Worcestershire Architectural Society, Mr. J. H. Markland read a paper under this title, from which we take some passages. After speaking of the state of architecture in England during the last century, he said,—and we shall not feel surprised that buildings, both ecclesiastical and civil, in the last century, should have been poor, often positively ugly. What were the confused ideas of one of our most distinguished architects, Inigo Jones, when he planned the chapel of Lincoln's-inn? We are told, in so many words, that this particular structure "shows the skill of that famous architect, he having therein adapted the old Gothic way of building to the manner of the Tuscan order." What could be anticipated from this ill-assorted union? The flower-pots and vases that still surmount some of our church towers may probably be ascribed to this building and to Jones's great authority. Wren himself regarded the height of our cathedrals as a defect: he agreed with his friend Evelyn,

that these glories of our land were "congestions of heavy, dark, melancholy, and monkish piles, without any just proportion, use, or beauty, compared with the truly ancient." But not only were the architects blind to all the beauties of mediæval art, and unable to give us such buildings as are yearly rising around us, but where were the patrons of real taste to call forth talent? True it is that immense houses, vast imposing fabrics, were built: Blenheim, Castle Howard, King's Weston, and others, though they furnished subjects for epigrams on Vanbrugh, unquestionably possess a certain degree of heavy grandeur, and were vindicated by no less a man than Sir Joshua Reynolds, as displaying originality of invention and skill in composition. But supposing the owner of one of these palaces had sufficient piety and right feeling to place a church near it, what was the style of that building? Specimens show that over the many works executed through the reigns of Queen Anne and the first two Georges we had better throw a veil.

The absence of true feeling for the sublime and beautiful in architecture a century ago may be detected in various ways. I attach much weight to the silence of our best writers both in poetry and prose, in the Georgian age, as proving clearly that they could not appreciate the solemn glories of our cathedrals—those wondrous and hallowed piles. At a somewhat earlier period, poets were susceptible of the great beauties of Mediæval architecture. Milton's love for the "high embowed roof" and "antique pillars massive proof," was doubtless impressed upon his mind by being educated under the shadow of the old Cathedral of St. Paul; and the lines of Congreve, so highly praised by Johnson, show that a wit, the author of "Love for Love," and "the Old Bachelor," had not paced the aisles of a cathedral without emotion.

> "How reverend is the face of this tall pile,
> Whose ancient pillars rear their marble heads,
> To bear aloft its arched and ponderous roof,
> By its own weight made steadfast and immoveable."

How changed was the feeling of a later age! I most unwillingly allude to Gray in any other terms than those which so exquisite a poet may be thought to merit, but it can scarcely be believed that when he first visited York, instead of breaking forth into raptures with the minster, and the ruins of St. Mary's Abbey, he simply notices the cheapness of walnuts in that city. He subsequently made atonement by describing Kirkstall Abbey with all the feeling of a poet and a painter; and from his chronological arrangement of many of our cathedrals and other buildings, it is obvious that Gray carefully studied Gothic architecture, and exercised upon it his correct taste and acute discrimination. Walpole (to whom I have already referred), regarded as the "admirable Crichton" of his day, as a man of superlative taste, "the observed of all observers," makes tours, and visits various cities, and what are his comments? They are really worth quoting, as being the opinions of an English gentleman of high birth, educated at Eton and Cambridge a hundred years ago. Speaking of Bristol cathedral, he says,—"It is very neat, and has pretty tombs, besides the two windows of painted glass, given by Mrs. Ellen Gwyn." (Letters, V. 165.) Of Malvern Abbey—"It is situated half-way up an immense mountain of that name: the mountain is very long in shape, like the prints of a whale's back: towards the larger end lies the town. Nothing remains but a beautiful gateway, and a church which is very large." This is all that is said of that fine building. (Letters, III. 21.) Of Worcester Cathedral—"It is pretty [again this appropriate epithet!], and has several tombs, and clusters of light pillars of Derbyshire marble, lately cleaned. Prince Arthur's tomb, from whence we took the paper for the hall and staircase (at Strawberry hill,—rather an undignified appropriation of this fine monument), to my great surprise, is on a less scale than the paper." (Letters, III. 21.) Of Gloucester Cathedral, when writing to Bentley, he says—"The outside of the cathedral is beautifully light; the pillars in the nave outrageously plump and heavy. Kent designed the screen, but knew no more than he did anywhere else how to enter into the true Gothic taste. Sir Christopher Wren, who built the tower of the great gateway at Christchurch, has catched the graces of it as happily as you could do: there is particularly a niche between the two compartments of a window, that is a masterpiece." We will not criticise this octagonal tower, erected for the abode of "the mighty Tom," on his translation from the tower of the cathedral; but with all the partialities which the members of that famous college may entertain for it, they will scarcely join with Walpole in this encomium. Again, in speaking of Gloucester Cathedral, Walpole adds,—"But here is a modernity which beats all antiquities for curiosity: just by the high altar is a small pew, hung with green damask, with curtains of the same; a small corner-cupboard, painted, carved, and gilt, for books, in one corner, and two troughs of a bird-cage, with seeds and water. It belongs to a Mrs. Cotton, who, having lost a favourite daughter, is convinced that her soul is transmigrated into a robin redbreast; for which reason she passes her life in making an aviary of the cathedral of Gloucester. The chapter indulge this whim, as she contributes abundantly to glaze, whitewash, and ornament the church." (Letters, III. 23.) The deans and chapters of that day must have been most indulgent to the lady's feelings: we may easily suppose what would be the reception at the present day of a similar request.

In their way these remarks, we must admit, are characteristic of the taste of the age; and what was the fruit of Walpole's observations? why, the erection of a card-paper house at Twickenham, with what Macaulay calls pie-crust battlements, after the most approved examples of Batty Langley. A portion termed "the cloister" was really nothing more than three low arches, more fitted to hold dogs or birds than for an ambulatory. A man might in six strides have compassed it. Yet it was of that building that Gray says—"There was a purity and propriety of Gothicism in it that I have not seen elsewhere."

It will scarcely be believed, but I quote it as another fact illustrative of the darkness of feeling at this period, that when General Wolfe's monument was erected in Westminster Abbey, the fine tomb of Aylmer de Valence was actually removed for its reception. An offer was subsequently made by an amateur antiquary for the purchase of De Valence's monument; but the worthy dean, Dr. Pearce, though he had permitted Mr. Wilton's modern sculpture to usurp the place of the ancient tomb, was staggered by this bold proposal, and placed it in the situation which it now occupies.

LIVERPOOL ARCHITECTURAL SOCIETY.

ST. GEORGE'S HALL.

The first meeting of the seventh session of the Liverpool Architectural and Archæological Society took place last week, Mr. John Hay, president, in the chair.

The secretary announced the receipt of various donations, including an illustrated work on the Birkenhead Priory, by Mr. Mason and Mr. Hunt. The origination of this work was the result of a prize offered to the student members of the society for the best series of drawings in illustration of Birkenhead Priory. Two sets of drawings were selected for the prize, and one of these sets constituted the illustrations of the work which had been presented to them. The work itself was dedicated to the Historic Society of Cheshire, whilst the very existence of the society which originated the views, and gave a prize for them, was altogether ignored. He considered this a gross insult to their society, and therefore moved the rejection of the donation. Mr. Verelst seconded the motion, animadverting in severe terms upon what he characterized as the monstrous ingratitude of the authors.

In his opening address the president said,—Our magnificent and noble hall and assize courts have been completed and duly inaugurated; the wisdom of the British Association has consecrated its walls; but so much has been so recently well written and said, that no praise of mine can add to our admiration. No man, however illiterate and uncultivated his mind may be, can absolutely resist the elevating influences of art. The building in question is a masterpiece of art: it is, consequently, a purifier of morals, a refiner of taste, in short, a public benefit. The abortive attempt of a Mr. Bardwell to sully the well-earned fame of the late Mr. Elmes, has met with no sympathy. I dare say, if we had the model, which professes to be the parent of St. George's Hall, before us, there is sufficient critical acumen in this room to find a grandfather! Why Mr. Bardwell should so far forget himself as to throw a shade upon the reputation of Mr. Elmes at this period of the history of St. George's Hall, or what object he could have in view, unless an unenviable notoriety, I am utterly at a loss to conceive. The parts and details of classic design are common property; in their combination and adaptation for the purposes required consists the merit, and no ordinary merit it is. In no instance throughout Europe have these elements been grappled with by so masterly a hand as that of the late Mr. Elmes. As well may the architect of our ponderous Custom-house rise to challenge the theft. But it is always unfortunate with the unsuccessful competitor that he had no "uncle," or affectionate relation, on the committee. Mr. Bardwell must now try again, and again, and again, until he succeed in eclipsing this illegitimate progeny of his; only, if he do succeed, let it have no family likeness to St. George's Hall. The "ever-discerning public" are not always generous, and cannot be, under the circumstances in which he has placed himself. Referring to Mr. Boult's account, which has somewhat refreshed my own recollections of the competition for St. George's Hall, I am persuaded the committee who declared in favour of Mr. Elmes for the Hall, the Assize Courts, and the Collegiate Institution, were actuated by the fairest principles of honour and justice, directed by a sound judgment and judicious taste, in awarding the premiums successively to Mr Elmes. I only wish he had been remunerated as handsomely as he justly merited. Much has been said from time to time about the immense cost of this structure, and bitter complaints were made by disappointed competitors at the increased margin allowed to Mr. Elmes. Whether they who complained would have done better or worse is not the question; but I feel persuaded, and I am sure every unprejudiced mind will agree with me, that the building is worth all that it has cost, and that it ought not more to be valued by the cost of the mere stone and mortar than a picture of Turner's for its canvas and paint. It is, I repeat, a work of art, and nine out of every ten men in the profession must rival it in every town of the kingdom before we betray our ignorance in estimating it by such a standard. Turning to a different point of this fertile subject, it is to be hoped that the town-council may yet find ways and means of supplementing the small remuneration received by Mr. Elmes, as an act of moral justice to his widow and son, and, at the very least, place the first statue, by the best artist in the kingdom, in the eastern portico, of the talented and lamented architect. Poor Elmes! the scaffolding of his lofty genius was too feeble: the framework of his eager and poetic spirit fell in ruins too soon: he perished in his work. Posterity will honour his memory, and do homage to his name. Other buildings, partaking more or less of a public character, are in progress, or have been completed, since we last met; showing character, and giving importance to our streets: there is the Corn Exchange, some merchants' offices in Water-street; a range of shops and offices in Lime-street,—all indicating decided progress and improvement; and all, I believe, the works of members of the society. There is also the Orphan Asylum Church, highly spoken of, which I regret I have not yet been able to visit.

In conclusion, Mr. Hay drew a picture of the evils attendant on the ignorance of workmen in relation to their employment, and also as evidenced in maintaining in idleness a set of men who, under the name of "delegates," go about from place to place fomenting discord between employers and employed.

PROVISION FOR THE WIDOW AND CHILD OF THE LATE MR. ELMES.

WE rejoice to observe that the merchants of Liverpool have resolved, as before noted, to manifest their princely gratitude and respect to the memory of one who has done such honour to their town as the talented but unfortunate architect of their noble St. George's Hall, by opening a subscription-list, as they have recently done, for behoof of his fatherless child, and its mother, Mrs. Elmes; for whom, therefore, we cannot doubt that such provision at least will thus be made as their deceased protector had intended himself to provide for them, by an insurance which, was unfortunately vitiated by his voyage to Jamaica, in search of lost health, to enable him, if possible, personally to do so. The subscriptions now amount to some 600*l.* or 700*l.*; and although we fully expected that even already this list would have been further filled up, to at least two or three times this amount, we are confident it is coming, as we know that the merchants of Liverpool are not the men to stultify themselves by undertaking to do what they are not fully determined to carry out in a manner worthy both of themselves and of him whose merits they are thus about to show that they appreciate. Of the love of art displayed by many of the Liverpool merchants, and of its princely remuneration by them, every one has heard. Their treatment of Mr. Elmes himself while in life was no exception, although the sum he received for his labours (4,000*l.*) was spread over many years of continued exertions in their behalf, and included much personal outlay and expenditure, which prevented him from benefiting his family permanently by its means. In the mere inauguration of St. George's Hall itself, the liberality of the Liverpool people has just been displayed in various ways, as, for instance, by payment of no less than 300*l.* each to three or four musical *artistes* for causing the expanse of Elmes's glorious hall to resound with their sweet voices. How much more then may we expect shortly to see contributed by these lovers of art, as a voluntary testimonial to the merits and the memory of Elmes himself! All *we* require to do is simply to urge them to a little more activity in putting down their names; for sure we are (and indeed their own newspaper press informs us) they fully intend to do so; and we cannot therefore attribute their slowness of movement to niggardly reluctance, to ingratitude, or indeed to any thing but the urgency of time-absorbing business pursuits, which, however, in such a case, we must say, scarcely constitutes an adequate excuse.

Visconti, the architect of the new portion of the Louvre, by the way, is about to have a statue erected at Paris to his memory. We say, by the way, inasmuch as we are proud to learn that such a statue may soon have its parallel at Liverpool, where it is proposed to erect some suitable monument in St. George's Hall itself, to the memory of its architect.

PROVINCIAL NEWS.

Cambridge.—The new dining-hall at Gonville and Caius College was formally opened with a dinner to the workmen who erected it, and others, who partook of the hospitality of the Master and Fellows of the Society, on Wednesday in week before last. The new hall is Elizabethan in its style of architecture, with an open roof. It has been built to accommodate freely 250 persons. Its ground area is 72 feet 6 inches by 32 feet 6 inches, and its height from the hall line to the roof in the centre, 48 feet, the wall plate being 27½ feet from the hall line, and the roof ascending from this on either side. There is in addition a new library, 72 feet in length, with sixteen sets of new rooms, the total cost being about 14,000*l.* The building may now be said to be complete, excepting in some minor details.

Oxford.—During the whole of the long vacation, extensive building operations have been going on at the eastern extremity of Magdalen College. These have partaken rather more of the nature of repairs than alterations; but as they have progressed, some decided improvements, according to the *University Herald*, have been effected. An oriel window, or rather three windows rising one above the other, now adorn the river side of the college, which anciently presented rather a blank aspect. The whole of the buildings near Magdalen-bridge have been nearly rebuilt, and a new set of rooms has been added to the available accommodation of the college. It is said to be in contemplation to alter and improve the whole of the southern line of frontage after a time, a work obviously requiring to be done.——Building operations of rather an extensive character have been commenced at Exeter College. It is in contemplation to pull down the blank wall in Broad-street, and upon the ground it encloses to continue the line of buildings so as to present a Gothic elevation extending from the Ashmolean to Mr. Parker's house. In the centre of the line will rise a castellated tower, with an arched entrance gate, and three rooms over it. The new buildings will comprise in all nineteen sets of rooms. An oriel window at the western extremity of the frontage will be placed uniform with the present eastern oriel. Further alterations within the walls of the college are also mentioned. The library, a building in the Greek style, is to make room for a more fitting edifice, and the rebuilding of the chapel is projected. The erection of the new buildings in Broad-street alone is a work of considerable magnitude. Leave has been granted by the commissioners for the necessary hoarding in the street to remain up fifteen months.

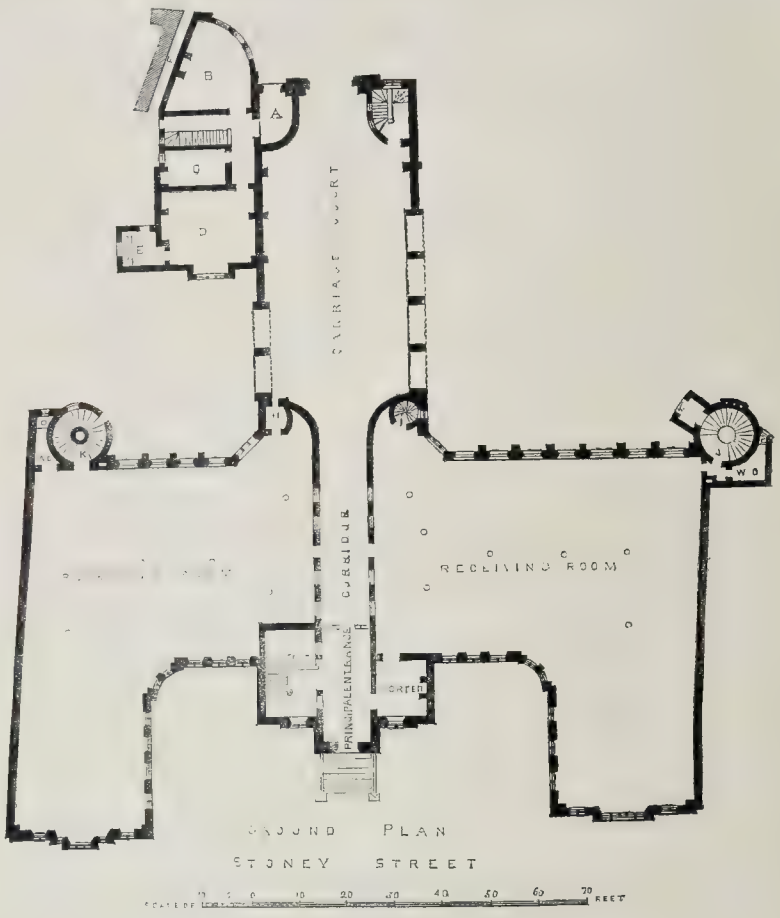
Woodstock.—The new National Schools here some time since noticed in our correspondence, are now complete, at the cost of about 1,200*l.* the bazaar held in Blenheim-park in June last, patronised by the Duke of Marlborough, the Marquis and Marchioness of Blandford, &c. realising nearly the amount before deficient. They were to be opened this week. Mr. H. Quarterman, of Oxford, was the builder; Mr. Teulon, the architect.

Uttoxeter.—The Smithfield, which has been formed in the rear of the Town-hall (now in course of completion), was opened on the 4th inst. The area allotted to this purpose is square in the part containing the cattle-stalls, with a smaller end for pig and sheep pens. The stalls are ranged in six rows, numbered from one to seventy-nine, each capable of holding a dozen beasts. They are approached by three large gates in Smithfield-road (late Smithy-lane), supported by pillars; the entrance for sheep and pigs being under the archway of the Town-hall, in High-street. The permanent sheep-pens are not yet erected, but temporary ones are provided for above 800 sheep.

Weymouth.—The following tenders were made for the erection of the new Fish-market here:—

Messrs. Reynold and Son	£650
Messrs. Robert Goodyear and Son ...	570
Mr. William Hart	479
Architect's charge for working out the quantities	88

Our correspondent, who sends us these tenders from Weymouth, speaks of the family and other connections of one or other of those tendering, with certain members of the corporation who had to decide upon the tenders themselves; but so long as the lowest tender was, as usual, accepted, we suspect we cannot enter on the subject of these incidental connections, or the inferences intended to be drawn from them. At the opening of the tenders the mayor expressed his disappointment as to the cost, the architect, Mr. T. Bury, having, he said, confidently stated that they might "expect to have change out of 350*l.*" Some discussion as to the architect's charge took place, one of the council, Mr. Pothecary, stating his impression that it was "an astounding sum of money;" to which the mayor replied that he had been given to understand that, large as the sum appeared to be, it would be beneficial to the contractor, and that it was a necessary proceeding.



Swansea.—The *Cambrian* calls the attention of the Improvement Committee of the Local Board of Health, to the works now in progress for the Mumble-road, with the view of extending the House of Correction. The wall is now nearly completed, and will when finished, it is said, be a great improvement to this part of the town; but it would seem that it is intended to allow a very unsightly and dilapidated pile of stables adjoining "William's-terrace" to remain standing, thus not only obstructing the free current of air, but creating an unsightly and unwholesome nuisance to the whole neighbourhood. These premises belong, it appears, to the corporation, and are in a very dilapidated condition. "Why, then," asks the *Cambrian*, "are they not pulled down? Surely if taste and attention to sanitary conditions are to be looked upon as virtues, the example should be set by public bodies in dealing with their own property."

Ironville.—The first stone of the Jessop monument was laid on Monday in last week. A procession of the workmen of the Butterley Company was formed from the different works, headed by a local "brass band," and flags with suitable inscriptions. Throughout the day the village had the appearance of a grand holiday, all the shops being closed.

Sheffield.—A new building for business purposes is noticed by the local *Independent*, as a novelty in Sheffield. The building, to which a centre archway is the entrance, is much larger than either the Cutlers'-hall or Music-hall, being about 49 yards long, 22 yards wide, and 10 yards high. The roof is suggestive of the Crystal Palace, but it is "much more ornamented and pleasing." There are no straight girders or trusses to intercept the view of the whole roof. The girders, which act as gutters, are arched, and the connections so formed that the roof seems supported, as it were, on rainbows. There is no trussing or unsightly support visible in the interior. The general character of the architecture is Grecian. Some of the main features are noted in detail, especially the capitals of columns, pilasters in centre of room, frames around large mirrors at south end, and capital and entablature of door at north end. The decoration is said to harmonize with the design; and by a judicious application of colour, adds our authority, the light and shade produced by the architectural forms and ornaments are rendered more decided, and the parts made subservient to the general effect. The illumination of the building by gas is also novel, the light by night as well as by day being obtained wholly from the roof [the sun light, as it is now called], making the effect most brilliant. The architect is Mr. Cashin, under whose directions the whole has been completed. Messrs. Barber and Madin were the builders.

Oldham.—The public baths here were formally opened on Monday week by the mayor and members of town council, the Peel testimonial committee, and other gentlemen, who at the same time inaugurated a bust of the late Sir Robert Peel in the vestibule. The baths were originated by subscriptions raised for the purpose of perpetuating the memory of Sir Robert, although the inhabitants are indebted to the corporation of the borough for their completion, as the sum originally raised would have gone a very little way towards the erection of the building. The bust is executed by Mr. A. Munro, of London, and the baths have been erected from designs furnished by Mr. Walter Titterson, at a cost of 4,011*l.* 10*s.* The building is externally of the Grecian style of architecture, and consists of a large plunge-bath for males, 15½ yards by 6 yards; a smaller for females, 5 yards and 1 foot square; two family bath-rooms, fitted with vapour, shower, and lounge; invalids' bath-room; four first-class male baths, private; five second-class, ditto; and on the females' side, three first-class, three second-class, and one family bath, with residence for manager, and requisite accommodation for washing, mangling, ironing, &c. In less than ten minutes after the ceremony of opening took place, the large plunge-bath was crowded with bathers, and during the day no fewer than 546 bathed.

Stretford.—A new public hall and mechanics' institution has recently been erected here, and was first opened to the public on Sunday week. The hall has cost about 1,000*l.* The style is Italian, with a stone entrance and stock brick front. The building is 20 yards long by 12 yards wide, and two stories high. In front there are five windows, one on each side of the door, and three above. On each side of the entrance-hall, on the ground-floor, there is a small committee-room. Behind these is the lecture-hall, which is 43 feet by 23 feet, and 21 feet in height. Over the com-

A NOTTINGHAM WAREHOUSE.

mittee-rooms and entrance-hall is a sort of gallery, to be used as a library and reading-room. It is 33 feet long by 14 feet wide, and is divided from the lecture-room by a sliding partition, by drawing down which the room may be used as an orchestra, or a gallery to the lecture-hall, as occasion may require. The lecture-room is lighted from eight windows, four on each side. Mr. Charles Lee, of Manchester, is the architect; and the builders are Messrs. McClean, also of Manchester.

Preston.—A free library and museum are about to be established in this town.

A NOTTINGHAM WAREHOUSE.

The building represented in the engraving is one of the many new warehouses which are now in course of erection in Nottingham, and is for the firm of Messrs. Adams and Page, lace manufacturers.

It presents a front next Stoney-street, 145 feet wide, and five stories high, the centre part being six stories, and extending to the depth of 144 feet towards St. Mary's-gate. The basement and ground-story fronts are faced with Ancaster and Matlock stone, the remainder with red dressed bricks, with stone window dressings, quoins, &c. to the centre and wings.

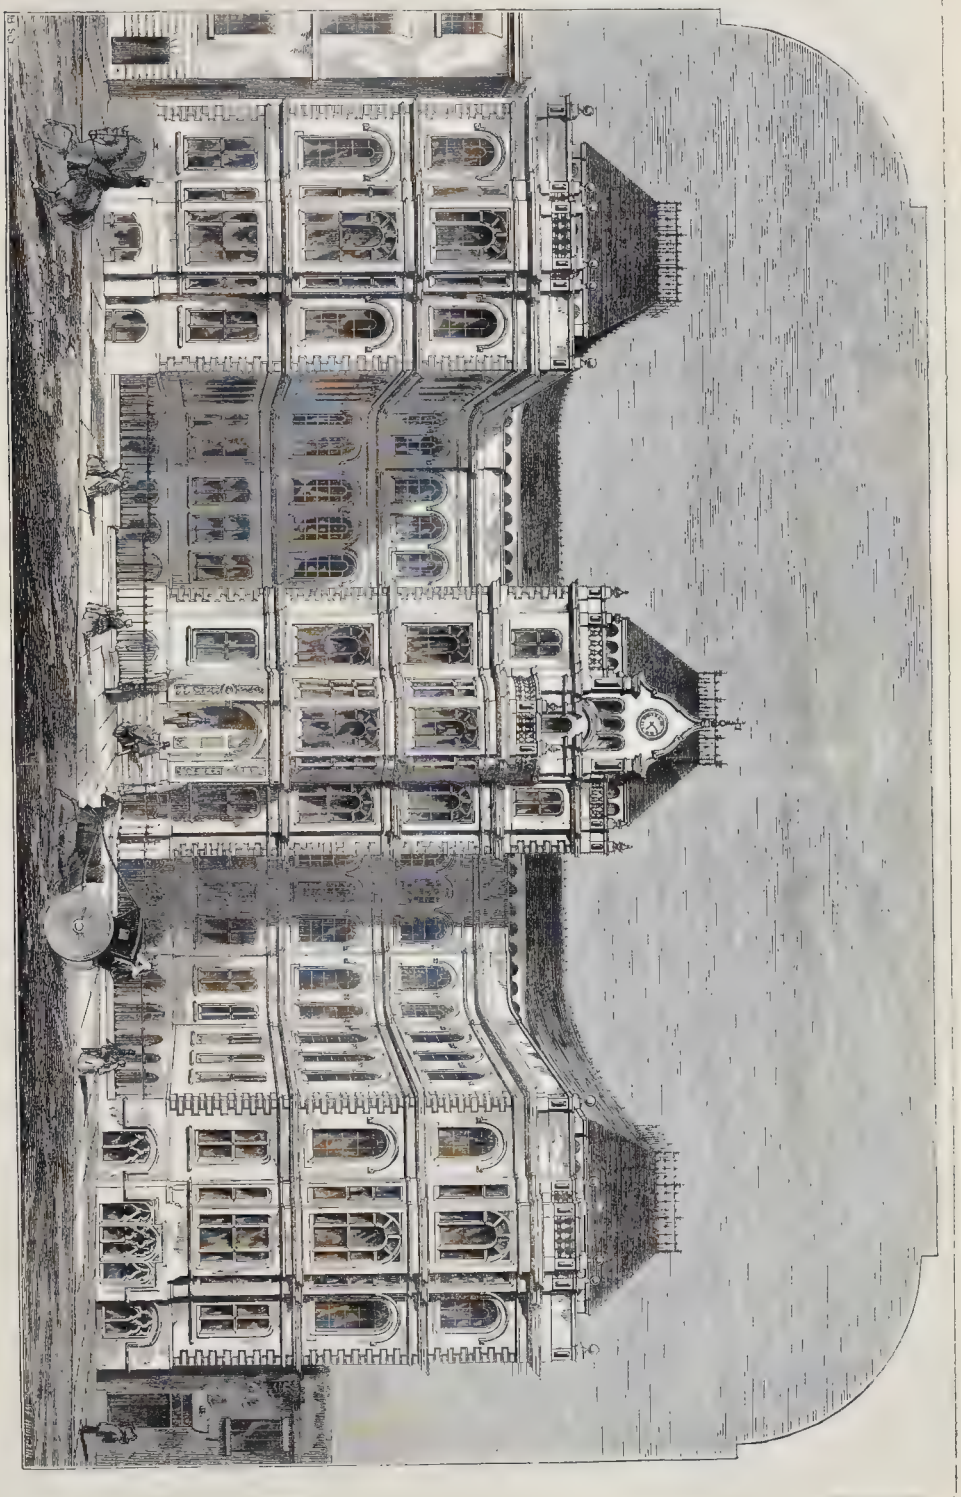
The whole of the walls are built with perforated bricks (Beart's patent), for the manufacture of which there are extensive works at Nottingham. In the brick fronts the window reveals are worked with moulded bricks, and the sashes are of cast-iron. The stone windows are rebated for the glass.

The floors are principally of timber, fire-proof floors having only been partially adopted in Nottingham. Those which have been introduced are on Fox and Barrett's principle. The roofs are of high pitch, giving not only importance to the edifice, but, being provided with continuous vertical roof lights, form excellent and lofty work-rooms for the hands.

The warehouse will be warmed by hot air, conveyed by flues in the walls, the apparatus for which is furnished by and fitted up under the direction of Mr. Alfred Penny, engineer, of London.

Interiorly the building has every convenience which can conduce to the efficient carrying on of the business in its various departments, and minister to the comforts of the assistants engaged therein. The contractors for the building are Messrs. C. C. and A. Dennett.

The same style of architecture has been adopted by Mr. Hine—from whose design this is erected—in about a dozen other warehouses and buildings required for the lace and hosiery trade in this town, and has been found well adapted for edifices of this description, where substantial construction and abundance of light are much needed. In some cases the warehouses are lighted from the roof as well as the sides, and have two or three tiers of broad g leries running round them, each fitted up w double rows of counters. Those for Mess Birkin, Messrs. J. and H. Hadden and Co. a Messrs. Hine, Mundella, and Co. are the larg built on this principle.



The sale-room in the last-named warehouse 150 feet long, 40 feet wide, and 40 feet high.

This warehouse was the first of the new st of warehouses, and was built in 1851, sin which time a considerable number of wa houses and factories, in addition to those abo mentioned, have been erected. These in ma cases display considerable architectural sk and exhibit throughout in a striking degree t commercial enterprise of this rapidly-improvi town, which, we may here say, owes someth to Mr. Hine.

THE BUILDINGS' ACT.

The magistrates of Surrey, at their quar sessions at Kingston, on Tuesday last, appoin a committee to investigate the numerous defe of the Metropolitan Buildings' Act, and to port thereupon, as well as upon the best me of obtaining an amendment.

Peckham.—A new chapel is to be built at Pe ham, Mr. E. W. Parker, architect. The tender Mr. Cook, 560*l.* has been accepted.

A NOTTINGHAM WAREHOUSE.—Mr. T. C. Hine, Architect.

THE ENGLISH ARCHITECTURAL EXHIBITORS AT THE FRENCH UNIVERSAL EXHIBITION.

WE believe that the profession have not come forward with the prompt earnestness that might have been expected from them, to uphold the character of this country for architecture. Is this as it should be? Or is there any cause of which we are unaware? Have not our architects sufficient zeal and patriotism to overcome the *vis inertiæ* of ordinary occasions, to meet *this* which is *not* an ordinary occasion? Is that City of Palaces, the modern Athens, Edinburgh, to have no illustrations there? Is Dublin not to be fitly represented? If the commissioners were to submit to public inspection the works sent in, were it for a few days only, before their departure for France, it would surely vex some of those who have neglected this opportunity. Some might regret not being one of the gallant band of exhibitors: others might feel that they might also have sent something worthy of their name and standing, and which might have occupied an honourable position among the drawings or models exhibited. Drawings will not be required to be forwarded till February, we understand; so that there is plenty of time for exertion. But application should be made forthwith for space to Captain Owen, at Marlborough House. Perhaps there is some want of information on the subject.

CHURCHYARD MEMORIALS.

IN every churchyard Pelions upon Ossas of stone are heaped up over the graves of the "well to do," but the poor are left without any memorial, for they are unable to place tombstones to mark where their relatives rest. I think it would be feasible (in populous and large parishes at least) to erect churchyard crosses, on which the privilege of inscribing the name of any person buried in the churchyard might be obtained, by the payment of a fee to be applied towards liquidating the cost of the memorial. Thus an architectural ornament might be added to many a churchyard, and the prevailing bad taste as to sepulchral monuments corrected in some degree.

Supposing a memorial affording space on its various parts for 400 names were erected for 100*l.* at the charge of the parish, in course of time this outlay would be returned, by making a charge of 5s. (exclusive of cutting) for every name inscribed. These memorials might take various forms, even such as a church porch, a lich-gate, &c. &c. W. S. MEADE.

CHURCH-BUILDING NEWS.

Lincoln.—The restoration of the exterior of the cathedral is still progressing with vigour. Workmen are busily engaged in laying down large blocks of stone, on the top of which are to be placed an iron palisading, thus enclosing the useless area on the south side of the cathedral. The iron gates now standing in front of the south porch will be brought forward to the foot pavement, and the stoneworks of the chapels are to be restored. The south porch, according to the local *Chronicle*, will remain untouched.——The consecration of the little chapel of St. Anne's Bede-houses, took place on Tuesday in week before last. The chapel and houses were erected at the cost of the Rev. R. W. Sibthorp, the latter from designs by the late Mr. Pugin. The Bede church or chapel (of which the local *Chronicle* gives an engraving) is built of brick-work, surmounted by stone dressings, and covered with Staffordshire tiles. The church, says the paper just named, may be considered a Gothic structure, with a great deal of original peculiarity in the design, which was furnished by Mr. Butterfield, under whose superintendence the building has been erected by Mr. Charles Ward, builder, of Lincoln, at a cost approaching the sum of 2,000*l.* The building comprises a nave and chancel capable of seating about 110 persons (all free, except those needed for the accommodation of the Bede-women), vestry at north-east corner, and porch or entrance at south-west corner. The bell turret rises over the chancel arch to the height of nearly 30 feet: it is octagonal with geometrical openings, and is supplied with a bell, by Mr. Mears, of Whitechapel. The interior is highly decorated. There are stained open seats in nave. The chancel stalls for the Bede women are of solid oak, as are also the altar rail and table frame, with suitable carvings. The roof timbers are wrought and decorated with azure, vermilion, and gold. The floors to chancel and sacrarium are paved with Minton's encaustic tiles, and the reredos is also finished in encaustic tiles, under a stone string or panel formed of trefoil tracery. The chancel window is of stained glass, by Wailes, the subject being "The Transfiguration." The grounds are laid out for burials on the north and east sides of the chapel, and the remains of two of the inmates of the Bede-houses have already been deposited therein, and stones placed over them, noting their name, age, and period of death.

Framilode. — The new district church of St. Peter was consecrated on Thursday in week before last. The building stands on the south bank of the Severn, a short distance above the Framilode Passage-house. It is built in the Norman style of architecture, and consists of a nave and semicircular chancel or apse. The nave is 30 feet in width by 62 feet in length, and the apse 10 feet 3 in. in diameter. There is a small vestry on the south side 7 feet wide by 11 feet 9 in. long. The bell-tower is built on the north side facing the river, through which tower is the principal entrance into the church: it is about 7 feet square internally, and about 60 feet in height. The walls are built of grey stone range work, with Bath stone dressings. The interior of the apse roof is painted blue, bespangled with stars. The nave roof is open, of plain and simple construction, made of deal, stained. The seats are also of deal, stained, and open without floor-boards. The pulpit is of Caen stone. The whole area of the church is floored with red, black, and white Staffordshire flooring-tiles, arranged in pattern. A portion of the land purchased, through the munificence of the Rev. Sir Lionel Darell, bart. has been fenced off for a burial-ground, and upon which also a new school-room has been partially erected at the back of the church. This school-room is the design of the Rev. Sir Lionel Darrell, and will not be finished for some time. The church has sittings for adults, 264; for children, 70; total 334—all free and open. The three lights in the chancel are by Powell, of Whitefriars: they are flowered quarries, with diaper, the central light having a jewelled cross. The school is intended for 200 children, besides infant-school and class-rooms. The bells at the school and the church are from the foundry of Llewellyn, James, and Co. Castle-green, Bristol. Mr. Niblett, of Gloucester, was the architect, and Messrs. Wall, Hook, and Spires were the contractors. The cost of the building, complete, has amounted to between 1,200*l.* and 1,300*l.*

Bristol.—The head light and three of five lights below of a painted east window, by Mr. Bell, of Bristol, have just been put up in the newly restored and repaired church of All Saints, in this city. The cost has been subscribed by friends of the vicar. The other two lights cannot be added until a further sum of 50*l.* is contributed.

Llwydiarth.—The consecration and public opening of the church here, and its burial-ground, took place on Wednesday in last week. The edifice is in the Gothic style, and was erected at the sole expense of Sir W. W. Wynn, Bart. M.P. It is situated on a gentle eminence near to Pont-Llogel. The building is capable of containing about 300 persons, sittings all free.

Leighton.—The opening of the new church at Leighton, near Welshpool, according to the Shrewsbury *Chronicle*, has at length taken place. The edifice is dedicated to the Holy Trinity, and has been erected at the sole expense of Mr. John Naylor, of Leighton Hall, from a design by Mr. W. H. Gee, of Liverpool, architect. It stands on the estate of the founder, who is said to have expended little short of 22,000*l.* in its erection and endowment. The style is English of the fourteenth century, and the material is stone of two different kinds, one, of a very dark blue-grey colour, found on the estate, and the other, a pale creamy sandstone, from the Minera Quarries, near Wrexham. All the groins, mouldings, bases, and enrichments are of the latter, the body of the walls and spire being built of the former. The church consists of a nave and side aisles, divided from each other by two ranges of lofty arches, springing from moulded clustered pillars, and which support the clerestory above; the aisles being lighted by windows filled with coloured glass, and the nave by clerestory lights, also coloured. Low arched, open timber roofs, with quatrefoils in the spandrils, cover the aisles; while, over the nave, a roof of elaborate design, open and traceried, rises from sculptured stone corbels, one between each pair of arches. The chancel roof is panelled, arched, and still more richly decorated, and its walls are broken into niches, and embossed with foliage. The chancel floor is laid in brown and azure tile-work. The great east window, as well as the west window, is of stained glass. The east window contains five lights, its extreme height being 23 feet, extreme width 11 feet, and height of arch 11 feet. This window is filled with five figures, nearly life size, representing our Saviour and the four Evangelists. Each figure is surmounted by canopied niches, within which are small figures of the patriarchs, judges, and prophets. The tracery within the arch contains representations of St. John preaching in the wilderness, the spirit descending upon the apostles at Pentecost, the raising of Lazarus, Our Lord giving sight to the blind, and the emblems of the Trinity, the IHS, and the Dove. The west window also contains five lights, its extreme height being 25 feet, extreme width, 11 feet, and height of arch 11 feet. The subject is an epitome of Biblical history. In the tracery are the emblems of the twelve tribes, the expulsion, and the accession. The west aisle window is filled with the arms of the founder. The chantry and aisle windows are filled with ornament and the founder's monogram. The whole of these windows were designed and executed, under the superintendence of the architect, by Messrs. Forrest and Bromley, of Liverpool. The dimensions of the building are as follow:—Extreme length from west to cast, 80½ feet; width of nave, 21 feet; width of two aisles, 21 feet; extreme width, 42 feet; length of chancel, 20 feet; width of chancel, 15 feet; width of tower (outside), 19½ feet square; height of walls to springing of main roof, 29½ feet; total height of ridge roll, 48 feet; height of tower from ground line to broach, 65½ feet; height of spire, 84½ feet; total height to pinnacle of spire, 150 feet. The builders are Messrs. J. and W. Walker, of Birkenhead. The encaustic tiles were manufactured by Messrs. Minton, Hollins, and Co. of Stoke-upon-Trent; and the (six) bells were cast at the foundry of Messrs. Taylor and Sons, of Loughborough. At a little distance from the church stands the parsonage.

Doncaster.—At a recent meeting of the Cemetery Commissioners, a letter from Mr. G. G. Scott was read, stating that it was impossible for him to design buildings which would suit them and do him credit for the sum of 1,500*l.* His estimate would be, for the consecrated chapel, 1,500*l.*; unconsecrated chapel, 750*l.*; lodge and entrance-gates, 300*l.*; making a total of 2,550*l.* Accordingly, Mr. Scott recommended the engagement of a local architect to carry out the views of the commissioners. It was then agreed to issue an advertisement offering a premium of 15*l.* for the best design and drawings of the proposed erections, and laying out the ground; the outlay not to exceed 1,600*l.*

Minsteracres.—A Gothic (R.C.) Chapel, dedicated to St. Elizabeth, has been erected by Mr. H. Silvertop, of Minsteracres, in connection with his mansion. The foundation-stone of the chapel, says the *Newcastle Courant*, was laid on the 13th of September, 1852, by the Hon. Mrs. Silvertop, and the architect is Mr. Joseph Hanson. It is in the Early Decorated style, and consists simply of a nave, from which the sanctuary is railed off. It is 66 feet in length, 22 in width, and 45 in height, and is capable of accommodating 300 persons, though there are seats furnished for only 132. It is lighted by an east, west, and four windows on the south side, all filled with tracery and stained glass, representing the patron saints of the different members of the family. The glass is the production of Mr. Barnet, of Edinburgh. The

most original feature in the chapel, adds the *Courant*, is a kind of cloister or triforium open to the church, running down the north side and connecting the private gallery, which is thrown across the west end, with the house.

Timahoe.—The first stone of a Protestant church was laid at Timahoe, in Queen's County, Ireland, on Tuesday in week before last. The subscriptions towards its cost amount to 270*l.* to which the Ecclesiastical Commissioners are to add 540*l.* The site, together with 100*l.* was contributed by Col. Close.

CONVERSAZIONE OF THE ARCHITECTURAL ASSOCIATION.

The report which was read at the opening meeting of the twelfth session of the Architectural Association, held at Lyon's-Inn Hall, on the 6th instant, congratulated the members on the continued progress of the society, on the cheering conviction that its existence had not been unserviceable, and on the fact that many obstacles and misapprehensions, which had to be overcome at an earlier period of the existence of the association, had now in a great measure vanished. The advantages derived from the free interchange of opinion, in the discussions following the papers read at the ordinary meetings, were especially dwelt upon, more particularly as eliciting from the meeting of men intent upon a common object, various manners of considering the same question.

The president then read an address, wherein the main point dwelt on was the common origin of all beauty which is admired for its own sake, whether conveyed by marble, stone, canvas, or language, since it is but a reflex through the mind of man of eternal truth, of which all nature bears the impress.

The position of critics was next considered, and their relations with architects, their taste, and the occasional value of their suggestions, as also the responsibility of architects for the ideas which critics may derive from their works, even if these ideas had not been present in similar form in their own minds. An illustration of sound criticism was drawn from the *Quarterly Review*, in a comparison between architecture and anatomy, as bringing to view the true position of architecture, as capable of expressing in the simplest form the great truths of relation. As it was necessary that the client have a liberal hand, so must the architect have high aspirations and elevated studies: he must contemplate something in nature other than its surface. Knowledge of materials and comparison of styles are not the object of study, since they answer but to grammar and logic, and various instances were addressed to show the correspondence between architecture and other arts in this respect, indicating a relation subsisting among them which presented itself as akin to something of a higher nature in our constitution.

The language of architecture is the description of motion in matter, the forms used are those of motion. The beauties of the ellipse discovered by Kepler and Newton are conveyed always in its use, and are one cause of the pleasure we derive from its form. The connection between the subject and the object was shown to have a place in architecture as well as in grammar; the action being the conveyance of force acting upwards or downwards, normally or tangentially. The subject of colour was shortly discussed, and a hope was expressed that a meaning would be found therein, not simply by contrast or harmony, but in reference to some active proceeding or condition which, once suggested, continued to be called to mind. Conventionalism had always been adopted by great artists in the treatment of natural form; for since they saw the specific truths of nature more clearly than others, they desired to convey them more distinctly, if not more generally, to the mind, not caring so much for the present pleasure as for the enhanced enjoyment on the re-examination of the natural form.

After a reference to the unsatisfactory position of the present study of symbolism, the discourse concluded as follows:—If in the remarks which I have now had the honour of addressing to you, a view of form has been recalled to your remembrance different from that mere shape which the material object assumes in the mind; if you can for the moment look at the three kingdoms of nature, and see in them the representatives of an action not without a purpose; if you can view colours as emanations, yet, for the most part, to be understood from the purity of light; if you will look at conventional form as more expressive of distinct thought than the more natural imitation;—then is there present in your minds a conception of that deeper symbolism which looks at all we see as the representative of something unseen, and which, consequently, considers all man's mental work as having for object in analysis the discovery of that inner thing, and in synthesis (and for synthesis what art so great as our own!) the demonstration of its connection with external nature.

THE VICTORIA BRIDGE AT MONTREAL.

The works of this stupendous undertaking are now in active progress. Its cost is to be about 7,000,000 dollars, or about one-seventh of the total expense of building the 1,112 miles comprising the Grand Trunk Railway of Canada.

The bridge is to be tubular, on the plan of the Britannia Bridge over the Menai Straits. It will consist of twenty-five spans or spaces for navigation between the twenty-four piers (exclusive of the two abutments) for the support of the tubes. The centre span will be 330 feet wide, and each of the other spans will be 242 feet wide. The width of each of the piers next to the abutments will be 15 feet, and the width of those approaching the two centre piers will be gradually increased, so that these two piers will each be 18 feet wide, or 3 feet more than those next the abutments. Each abutment is to be 242 feet long and 90 feet wide, and from the north shore of the St. Lawrence to the north abutment there will be a solid stone embankment (faced in rough masonry towards the current), 1,200 feet in length. The stone embankment leading from the south shore of the river to the south abutment, will be 600 feet long. The length of the bridge, from abutment to abutment, will be 8,000 feet, and its total length, from river bank to river bank, will be 10,284 feet, or 176 feet less than two English miles.

The clear distance between the ordinary summer level of the St. Lawrence and the under surface of the centre tube is to be 60 feet, and the height diminishes towards either side.

Each of the tubes will be 19 feet in height at the end, whence they will gradually increase to 22 feet 6 inches in the centre. The width of each tube will be 16 feet, or 9 feet 6 inches wider than the rail track. The total weight of iron in the tubes will be 10,400 tons, and they will be bound and rivetted together precisely in the same manner, and with similar machinery to that employed in the Britannia Bridge.

The piers close to the abutments will each contain about 6,000 tons of masonry. Scarcely a block used in the construction of the piers will be less than 7 tons weight, and many of them, especially those exposed to the force of the current, and to the breaking up of ice in spring, will weigh fully 10 tons each. The total amount of masonry in the piers will be 27,500,000 cubic feet, which at 13½ feet to the ton, gives a total weight of about 205,000 tons.

Mr. Robert Stephenson and Mr. A. M. Ross are the engineers of the bridge, on behalf of the Grand Trunk Railway, and the contractors are Messrs. Peto, Brassey, Betts, and Jackson.

Improvements of Dwellings of Scottish Peasantry.—While the Royal Family were at Balmoral lately, the Rev. H. Stuart, of Oathlaw, was admitted to an audience with Prince Albert, who is said to have complimented Mr. Stuart on his successful exertions; and after entering fully and patiently into various suggestions made by Mr. Stuart for improving labourers' dwellings in Scotland, and for working the association recently formed for this purpose, His Royal Highness is reported to have said he saw no cause why he should not now give his name as patron.

PURIFICATION OF GAS.

The columns of your journal are a constant evidence of your desire to benefit the public and to promote the interest of gas-makers, by calling public attention to those improvements which must greatly extend the use of gas as an illuminative agent. Your readers, from your repeated notices, are aware of my patented system of purifying gas on the premises of the consumer, thereby avoiding all those dangerous consequences of the gas passing over the foul deposits in the long lines of pipes between the gasworks and the consumer's premises.

Having had the honour of applying these patents to the extensive offices of the *Times*, in Printing House-square, and which have now been in operation nearly a year, I thought it advisable, some time back, to request the attendance of the excellent chemist at Apothecaries' Hall, Robert Warrington, esq. to witness the cleansing out of the purifier at the *Times* offices, and to remove, in his presence, the entire contents of it, with a view to the analysis of those contents; also by photometrical experiment to determine the illuminating value of the gas so purified, when burnt through the patent tubular gas-burner and glass combustion-chamber; and at the same time to collect the products of combustion of the gas so purified and consumed, and by proper analysis to state the results.

The following is the substance of his report:—

"The purifying apparatus was entirely cleaned out in my presence, and the whole of the contents, weighing 40 lbs. removed to my laboratory. I found in that quantity of material products equivalent to:—

	Cubic Inches.
Ammoniacal gas	17,000
Carbonic acid gas	10,348
Sulphuretted hydrogen gas	193
	27,541

As some of the condensed liquid products had been accidentally lost, I have no doubt that the above quantities are understated.

I also found that your patent tubular gas-burner, with a small glass combustion-chamber, was consuming 2¼ cubic feet per hour of the cannel gas thus purified, and that the light produced from such combustion, as ascertained by careful photometrical experiments, was equal to eighteen wax candles.

The condensable products from this gas were collected for several hours, and yielded, by evaporation, at 212 Fah. 0·006 grains per cent. consisting principally of sulphate of ammonia.

Robt. Warington."

Apologising for the length of this communication, I hope its importance will meet your excuse, when one of its facts shows that gas may be burnt producing distilled water, with six thousandths of a grain per cent. impurity.

John Leslie.

ISLINGTON.

Sir,—A paragraph having lately appeared in the *Builder*, representing the condition of several parts of the parish of Islington, particularly the courts near the Angel, to be most deplorable, for want of proper sanitary measures, I am directed by the trustees to inform you, that they have been anxiously engaged in endeavouring to remedy the evils complained of, and have already succeeded in removing, or greatly ameliorating, some of them, and that the exertions of the Board of Trustees, in the prospect and during the continuance of the present outbreak of cholera, have been properly appreciated by the Board of Health, who, through their president, Sir Benjamin Hall, have declared that in no parish, in or near London, have sanitary measures been so fully and satisfactorily carried out as in the parish of St. Mary, Islington.—I am, &c.

W. Sparling, Clerk to the Trustees.

Notices of Books.

History of the Iron Trade from the earliest records to the present period. By Harry Scrivener, Liverpool. New Edition. Longman and Co. 1854.

The former edition of this work appears to have brought down the history of the iron trade only to the year 1830. A new portion, therefore, of relatively great importance and interest, remained to be added, and this the author has done. His design is not to describe the various uses or manufactures of iron into instruments or machinery, but to report, from researches into ancient and later writers, what they have noticed of importance relative to the history of iron, leaving opportunity and occasion for the author's remarks throughout the treatise.

The expansion of the iron trade in this country within the last hundred years, is something quite extraordinary. The make of iron in 1750, was about 17,000 tons. In 1840, it had increased to about 1,300,000 tons; and now about the end of the hundred years beginning in 1750, the make of iron has still farther increased to about 2,700,000 tons. The inquiry of the author in the latter era of the history of the iron trade is directed mainly towards the causes by which this enormous increase has been encouraged, whether to the advantage of individuals as well as of the country, and whether the supply is likely to be supported, or, on the contrary, "whether reckless make has not brought us to a position, from which, unless mineral fields, at present unknown, come into operation, with similar advantages to the black band ironstone of Scotland, we must retrograde, or, as *Mrs. Malaprop* might say, 'begin to make our progress backwards,' and reduce the manufacture to somewhat more moderate limits." On this latter point, although the author suspects that the great masters of South Staffordshire are making "the beginning of an end," while looking to Northamptonshire and other places for a supply of ironstone; and, although the immense advantage and superiority of Britain in the iron trade were mainly based on the circumstance that all the materials necessary to its manufacture were found on or in the immediate vicinity of the spot where the furnaces were erected, a circumstance now, as in South Staffordshire, becoming, or about to become, obsolete; still, considering that scarcity of materials is beneficial to other districts of the same country, where, from want of coal, any share in the iron manufacture never was till now contemplated, the intimate connection of all parts of the country, thanks to our railways and canals, may still enable England to dispel this first shadow cast upon the iron trade, and to maintain its most valuable and important position among foreign nations as the great emporium of the iron manufacture.

This is an able treatise on a subject heretofore new to the book-world as a separate or special subject, and only treated of, at limited length, in such periodicals as our own, or in reviews and magazines.

Dirt and Pictures separated in the Works of the old Masters. By HENRY MERRIT. Holyoake and Co. Fleet-street. 1854.

PORTIONS of this treatise have already appeared in the *Leader* and *Athenæum*. The object of the author is to urge the propriety of careful and restricted restorations of damaged or defective points in valuable pictures by the old masters, and incidentally to aid in defining the precise limits of the restorer's legitimate province in relation to such works. The particular subjects of which he treats are,—Obscured Pictures; Durability of Pictures in Oil; Antipathy to Picture Restorations; Picture Cleaning; The Varnish and Glaze Theory; Standard Pictures; Vandyke's Process of Working; Special Cases for Rembrandt; An Ideal Process of Painting; Idiosyncracies of Picture Collectors; Professional Advisers; Picture Destroyers; The Restorer; and Devotion of the Restorer.

Miscellanea.

MR. CATHERWOOD, THE ARCHITECT.—On board the *Arctic*, which was lost off Newfoundland so recently, Mr. Catherwood, the author of the work on the "Antiquities of Central America," was a passenger. He has not been since heard of, but his family and friends entertain the hope that his valuable life may still be spared, on board a ship, which it is known rescued some of the passengers, and went on to New York. We sincerely hope this may be realised.

THE DEPTFORD DISTRICT SURVEYORSHIP is vacant by the death of Mr. Martyr. The appointment rests with the justices for the county of Kent.

COST OF DRAINS.—The following are the tenders sent in for 400 yards of 12-inch barrel drain, for the guardians of the parish of Bromley St. Leonard's:—

Smith	£75	0	0
Bright	65	0	0
Toole	57	10	0
Oakeley	56	13	4

A. B.

THE WHITTINGTON CLUB GUIDE.—A new Prospectus and Guide, setting forth in detail for the first time the objects and the many advantages of this useful and excellent Institution, has just been issued, and ought to be extensively circulated. The Whittington Club is the only institution in London which includes all the features of a literary institution and a club-house. It is peculiarly adapted for the middle classes in general, who not only obtain amusement and instruction of the most varied kinds within its walls, but also supplies for the physical man, and all on the most economical terms. Its halls and reading-rooms are frequented by ladies as well as gentlemen, and in this respect it has a decided advantage over the club-houses which in general are anything but favoured by the countenance of the ladies. Music and dancing are amongst the lighter order of amusements, which also include *conversazioni* and literary entertainments, discussions, lectures, and other instructive procedure. The reading-rooms contain a numerous and most ample supply of daily and weekly newspapers — metropolitan and provincial,—literary and scientific journals, magazines, and reviews, including files of papers, and the members enjoy the benefits of an extensive library of new and old works which circulate amongst them, or may be read over their tea or coffee. The classes to whom a couple of guineas a year can open up so many advantages are numerous, and our metropolitan young men especially amongst the middle classes cannot but derive great benefit from such an association as the Whittington Club, placed as it is in so central a situation as the Strand. The Institution, we are glad to hear, is making satisfactory progress.

ARCHITECTURAL MUSEUM. — Mr. Ruskin is to give three lectures at the Museum, on the distinctive difference between illumination and painting, on outline, and on colour, to art-workmen, and students in the lettering and writing trades, as shop-front writers, illuminators, &c. The first lecture will be given on the 11th November, Saturday afternoon, at 3 o'clock. The hour is scarcely the best for the purpose.

THE GREAT FIRE AT NEWCASTLE AND GATESHEAD.—We have already incidentally alluded to this extensive conflagration. The fire, says the *Gateshead Observer*, "broke out in Hillgate, Gateshead, on Friday morning before last, a little after twelve o'clock, and was accompanied, shortly after three, by an explosion, so loud and terrible, that not only all Gateshead and Newcastle shook and suffered from the shock, but even at North and South Shields, Tynemouth, Westoe, and Sunderland, the inhabitants were roused from their sleep, and supposed that a coal-pit blast or an earthquake was the cause. Our two towns were shivered. Everywhere, not only were window-squares broken, but the framework smashed. Shutters were torn down. Plate-glass was destroyed. The scattered masses of fire set the Quayside in flames simultaneously with the greater part of Hillgate; and the two towns were in conflagration in one and the same moment. The Tyne was lined on each side by a wall of flame. Our poor parish church of St. Mary is a shattered wreck; and, far worse, many of our neighbours, in Gateshead and Newcastle, were destroyed. Last year, in September and October, as we all too well remember, we had the pestilence; and this year, *in a locality where that pestilence much prevailed*, we have a great and scourging flame; just as the 'Great Fire' of London in 1666 followed the 'great plague' of 1665,"—a sad and singular corollary indeed, we may here observe, on the views we had just broached, on the previous week, in the columns of the *Builder*, as to the fact, and the probable cause, of the curious connection which appeared to exist between great pestilence and great fires,—a coincidence all the more singular that thousands of tons of *sulphur* were set fire to at Gateshead, and fumigated the whole of that town, as well as of Newcastle. By this fire, it seems, many of the very buildings which a member of the Sanitary Commission at Newcastle last year said ought to be bombarded, have been completely destroyed. It was supposed that the great explosion was produced by warehoused gunpowder; and, at all events, the ingredients of gunpowder, or something very like them, are said to have existed in immense quantities in one of the warehouses burnt,—namely, sulphur, nitrate of soda or potash, and charred peat. A chemist attributes the explosion to the contact of water with two of these ingredients, viz. the sulphur and the nitrate.

THE LIVERPOOL ASSOCIATION FOR IMPROVING DWELLINGS.—A committee has been elected, and the association has raised 22,000*l.* on the strength of which the Parent Society in London has lent them 40,000*l.*

AN AUSTRALIAN UNIVERSITY.—The foundation of a university and public library was laid at Victoria, by Governor Hotham, on the 3rd of July. The Legislature have granted 30,000*l.* for the buildings, and an endowment of 9,000*l.*

THE IRON TRADE.—Recent attempts to run up prices have not only failed, but, so far as they were at first successful, they completely checked (far more than the war seems to have done) the returning prosperity of the trade, and a re-action has ensued which is already bringing down prices to their previous standard, and leading to a belief of farther reductions, causing purchasers to be shy of giving any but absolutely necessary orders at the late quarterly meetings, which, so far as regards the regulation of nominal prices, have lost all the little *prestige* that may have been left them. Indeed, it now appears that current prices are admittedly not to be regulated by quarterly meetings at all, but that, on the contrary, these latter, so far as regards prices, are to be regulated by the prices current at the time of meeting! Such is the nonentical result of the last two series of quarterlies, and perhaps it is the most graceful way in which they can make their exit, or become extinct. The reduction of 10s. on bars some time since spoken of, is now said to be in many instances doubled, which brings prices back to those prevailing previous to the last rise of 20s.

THE SHEFFIELD SCHOOL OF PRACTICAL ART.—The annual meeting of this school took place on Thursday week in the Music Hall, Sheffield. The saloon was chiefly filled with ladies. A number of the gentry, clergy, and principal manufacturers occupied the orchestra, and the gallery also was, to a considerable extent, filled. The chair was taken by Mr. E. B. Denison, M.P. supported by Lord Milton, M.P.; Mr. T. Moulson, the Master Cutler; and a number of other gentlemen. Dr. Branson read the report and accounts. The report, in allusion to the proposed new building for the school, stated that "although by the new arrangements, the council are not so favourably placed, in a pecuniary sense, as they were, still they looked forward with confidence to the future; and fully relying on the good faith of the Government, on the liberality of their townsmen, and on the daily increasing desire for art which is manifesting itself, they have determined on commencing, as soon as possible, the erection of their new school; and the advertisement for designs has already appeared in the *Builder*, and in all our local papers. The result, it is to be hoped, will be the production of a building which shall fully meet all the growing requirements of this important institution." The chairman, after the meeting, sent a note from Doncaster to Dr. Branson, stating that he was in so great a hurry to catch the train, that he forgot to say he would subscribe a hundred pounds to the building fund for the "Institution of Ornamental Art." From the accounts it appeared that the sum received from Government was 536*l.*; students' fees, 230*l.*; subscriptions, 209*l.* To these were added the Overend prize, 50*l.*; the Montgomery medal fund, 60*l.*; and the Master Cutler, Mr. M. Hunter's prize, 5*l.* 5*s.* The total receipts were 1,142*l.* The expenditure included rents and taxes, 83*l.*; salaries of masters and assistant secretary, 664*l.*; attendants, 54*l.*; expenses of school, 103*l.*; other expenses about 100*l.*, and prizes and expenses of Montgomery prize medal about 130*l.* The meeting was addressed by Mr. Denison, Lord Milton, and various others, and on the part of the masters by Mr. Young Mitchell; and afterwards the prizes were distributed. A full report of the meeting appeared in the local *Independent*.

DAMP ON WALLS.—The cause of the deposit of damp on limestone walls is discussed in the *Gardener's Chronicle*. A correspondent says:—"The question is, has the limestone innate moisture? I thought so once, and lifted five or six limestone flags in an old entrance which were positively wet during warm, damp weather, but I found them so thoroughly dry on every side but that exposed to the atmosphere, that I replaced them. Perhaps we may come nearer the cause of the damp appearance of limestone walls by considering the heat-conducting property of the stone as compared with brick. We know that clay houses covered with thatch are the warmest known; stone and slate the coldest. I think that following this idea may lead us to the proof that there is no innate damp in limestone. I have a staircase," he adds, "descending to an outer door along a kitchen wall *flued*: this wall is painted 6 feet high in oil: above the plaster is merely coloured: in damp weather the smoothed oil surface is pearled over with moisture, whilst the rest of the wall gives no sign of it."

MELBOURNE.—Locomotives for the Melbourne and Hobson's Bay Railway are being built in the colony, Messrs. Robertson and Co. having obtained the contract. They have erected extensive workshops, with dwellings, for upwards of 100 men, out on the Salt River, a few miles from Melbourne, where they are busy carrying out their contract.

WAR LITHOES.—Messrs. Maclure, Macdonald, and Co. have issued a lithographic view of the battle of Alma, which gives some notion of the difficulties our brave troops had to surmount.

London Thoroughfares.—Nothing short of a second route to the Bank of England, parallel with Cheapside and the Strand from Holborn, will be effective. The cross traffic of that impassable street Chancery-lane, and the traffic of Fetter-lane and Farringdon-street, causes the delay. It is also the heavy traffic of Cheapside and Fenchurch-street that blocks up these streets. To remedy this, I propose that a new street be opened from the wide part of the Strand, opposite Somerset House, into the west side of Lincoln's-inn-fields, and from that to the wide part of Holborn, opposite Day and Martin's: this street would absorb the extra thronging of Chancery-lane: and again, if a few houses were taken down from the Holborn-bars to the top of Charles-street, Hatton-garden, and a few more houses between Little Britain and St. Martin's-le-Grand, so as to make it in a straight line with Gresham-street, a new route would be made for the Oxford-street traffic, which now so densely crowds Newgate-street and Cheapside, and also an easy access would be made both to the Eastern Counties Railway Station and to the Minories, with, for the better going through Fenchurch-street, the building of a bridge across the Fleet between Charles-street and Cow Cross-lane into Smithfield, which can be done for one-third of the cost of a bridge at Holborn-hill. I am seriously interested in some such improvement, so as to facilitate my daily passage between Charing-cross and the Minories, which very often occupies me half an hour each morning and evening more than it did three years ago: if this is the case what am I to expect in three years hence, according to the increase of traffic.—J. H.

The Chief Engineer of Sebastopol.—The following story is condensed from the *Northampton Herald*:—Mr. Upton was the surveyor of the Dunchurch and Stratford road, and resided at Daventry many years. His name frequently appears in the parliamentary reports of the commissioners of the Holyhead-road, between the years 1818 and 1826. All the great improvements on the above line were made under his superintendence, and Mr. Telford, the engineer of the Holyhead-road, had the highest opinion of his acquirements. Mr. Upton got into a course of expensive living unwarranted by his means, and was induced to commit many gross frauds on the trustees of the road. These frauds were discovered in April, 1826, and, on inquiry, it was covered that he had trespassed on the funds of the trustees to an amount exceeding 2,000*l.* Evidence was taken at the time of the facts, and he was held to bail to appear at the July assizes following, to answer to the charge. He obtained information that he would be indicted for forgery, and, if found guilty, would probably be hanged. He slept at Northampton, got up about seven o'clock, said he was going to take a walk, and should return to breakfast. He did not, however, appear again, and, as it seemed, went that morning to London. By some means he got a recommendation to the Russian authorities in London, received the appointment of engineer, and was, in a few days, on his way to the Crimea. We have heard by what means he obtained his recommendation, but if we were to publish them they would implicate parties whose characters were unimpeached. As talents are much more highly prized in Russia than honesty, it is possible that his real character might have been given. When Mr. Upton went to Sebastopol the harbour was in a very inefficient state, and in vain had several engineers endeavoured to improve it. He procured immense ironworks at Birmingham, and by dint of science, labour, and expense, he made it what it is. The Emperor was so pleased with him that he gave him the rank of lieutenant-colonel in the army, and he was received at the palace at St. Petersburg. In addition to his numerous forgeries and frauds, he got upwards of 3,000*l.* of the money of his wife's relations, not one farthing of which did he repay. He held the post-office at Daventry for a year, and at the end of it was a defaulter of nearly 300*l.* which one of his sureties was obliged to pay. He died about a year ago.—Lord Raglan, it is said, has taken Upton's son, near Sebastopol, and detains him as a prisoner.

Coal *versus* Sinews.—It has been proved, says Professor Henry, president of the Mechanics' Institute at Washington, that, on an average, four ounces of coal are sufficient to draw on a railroad one ton a mile. It has also been found, on experiment, that a man working on a treadmill continually for eight hours, will elevate one and one-half million of pounds one foot high. Now, Cornish engines will perform the same work by the expenditure of a pound and a half of coal. It follows from these data that about five tons of coal would evolve as much power during its combustion as would be equal to the continued labour of an able-bodied man for twenty years, at the rate of eight hours per day; or, in other words, to the average power of a man during the active period of life.

Chelmsford Artesian Well.—A flow of water has at length been obtained in the artesian well here, connected with the local Board of Health. Mr. Fenton, surveyor to the board, in describing the strata passed through, states that the contractor commenced sinking the shaft in August last year, and great delay was caused by the land springs working into the stratum of sand above the London clay. The shaft is 6 feet 6 inches in diameter, for the depth of 125 feet, with tunnels at the depth of 110 feet, to form a reservoir to collect the water when the engine is not at work. A 4-feet shaft has been sunk to the further depth of 80 feet, and from thence to the main spring a 12-inch iron pipe has been inserted. The shaft and tunnels will hold 40,000 gallons. On the 28th ult. the stratum of pebbles was reached, and the men left without any water in the shaft. Next morning, at six o'clock, 30,000 gallons were found to have risen and passed into the shafts or tunnels, and to all appearance a supply sufficient for the town will be obtained. For two days after the water entered the well, a deficiency was perceived at the other artesian wells in the town, but nearly all these have now their usual supply.

Yellow Coal in Van Diemen's Land.—The chartist convict Zephaniah Williams, is said to have discovered on land belonging to him, a combustible mineral of great value, and very similar to the Torbane-hill mineral lately got near Bathgate, in Scotland, of which much discussion has arisen on the question whether it is properly or improperly called coal. Williams is said to be likely to realise a large fortune by means of his new discovery. He was searching for coal below ground, when accidentally a lamp left above ground set fire to a piece of the yellow stone, which lies along the surface like shale, and it was with much difficulty the vivid combustion was suppressed. These minerals are far too valuable for use as common coal. The extraordinary value of the Torbanehill mineral was lately indicated in the Court of Queen's Bench, in a case regarding it, in which the plaintiff, on being sworn, deposed that he "manufactured and sold at the rate of 8,000 gallons a week" of paraffine oil, procured from the Torbanehill mineral: 8,000 gallons a week are 416,000 gallons a year, and accordingly, plaintiff's counsel, Mr. Bramwell, stated that his client sold (in round numbers) "400,000 gallons of this oil yearly;" Mr. Bramwell adding, "at 5*s.* per gallon." That is, the chemical works near Bathgate, which prepare this oil, manufacture and sell 100,000*l.* worth of it yearly; the greater portion of this sum being *clear profit*. This plaintiff's company, besides, is only one of many who order and obtain the Torbanehill mineral.

Effluvia.—A physician calls attention to the circumstance that the discharge-pipe of washhand basins often communicate with water-closets without being trapped, and suggests that a bend in the discharge-pipe of the basin would at once remedy this inconvenient and dangerous error.

Lettering Set-squares.—Mr. Stanley, of Great Turnstile, has sent us some set-squares, with the angles arranged for writing in Roman characters on architectural and mechanical drawing. They save time.

Electro-telegraphic.—A letter from Stockholm says, "Mr. Edland, professor of chemistry at the University of Upsal, has just taken out a patent for an invention by which messages can be sent by the electric wire simultaneously in opposite directions."

London Cesspools.—The number of cesspools existing merely within the square mile of the City of London was estimated by the City surveyor, in 1849, at *five thousand four hundred and fourteen* (Mr. Simon's report, p. 35). Were all these arranged equidistantly, the cesspools in each row would be less than four-and-twenty yards apart; and every cesspool not in an outward row, would have *four other cesspools within twenty-four yards of it*, and *eight within thirty-six yards*. In addition to these *five thousand four hundred and fourteen* cesspools (or whatever the present number may be), there are within the city about "fifty miles" of sewers, and probably upwards of one hundred miles of house-drains, both sewers and drains being, in many instances, constructed upon most injurious principles, and opening into the streets by means of countless gully-holes.* The square mile under consideration may be regarded as a *very favourable* specimen, as to underground arrangements, of *eight* or *ten* out of the twenty or thirty square miles generally figured forth as "The Map of London:" other square miles belonging to the map are almost as densely packed with latent nuisances; while throughout the entire metropolitan range there is undoubtedly not a single district, perhaps not a single street, but where enormous aggregations of sewer or cesspool matter are reeking within a few feet of the surface of the soil.—*Hopley's Lecture on Respiration.*

* Though these are reported as "all trapped," it is evident to every one who traverses the city that there arises from them an extremely offensive effluvium.

State of Rochester.—It is satisfactory to learn, that since our last notice appeared, the corporation have given the tenant of the slaughter-house complained of notice to quit, and that the property is to be henceforth let with a condition that it shall not be used as a slaughter-house at all, or for any other offensive trade. Since the place was even partially cleansed, no more deaths have occurred in its immediate vicinity. On a recent inspection of this slaughter-house, we hear, two carcases unfit for human food were found in it,—another urgent reason why it should be done away with. There is another abominable nuisance closely adjoining to this very slaughter-house, by the way. We allude to the public pump flanked by an ordure-pit adjoining it on each side, as if it were some manure-tank rather than a well whence the public actually derive the water they drink and prepare their food with. Surely the Rochester corporation, who display a willingness to do what is right, will no longer allow such an association of incompatibles to coexist, but will forthwith either have the pump removed, or the closets flanking it. In nine houses, more or less nearly adjoining this pump and the slaughter-house, there were deaths recently from cholera, and no wonder. We are sorry to learn that the magistrates of Rochester have given orders to all owners of property having surface-gutters running into the street to dig cesspools. This will only make bad worse in the long run, whereas the present state of things constitutes a strong ground for insisting on thorough drainage, which would improve the property of the landlords as well as the health of their tenants.

Dalston.—New schools are to be built in Myddleton-road, Dalston, Mr. Joseph James, architect, and tenders have been received ranging from 875*l.* to 633*l.* at which latter sum Messrs. Clever and Stanger are to build them.

Perpetual Motion.—The principle of perpetual motion is announced for the nine hundred and ninety-ninth time. Mr. J. G. Hendrickson, of New Jersey, is reported to have obtained it by means of arms and balls attached to a cylinder, so as to keep the extra weight always on one side, and therefore to give the cylinder a constant inclination to turn round. "The machine requires no starting: take away the blocks, and it goes off 'like a thing of life.'" The *Journal of Commerce* says of it,—"The model was in our office yesterday, and attached to some clock-work, which it turned without once stopping to breathe. We see no reason why it should not go until worn out. After a careful examination, we can safely say, in all seriousness, that the propelling power is self-contained and self-adjusting, and gives a sufficient active force to carry ordinary clockwork, and all without any winding up or replenishing." This new idea is a mere modification of a very old one, in which a ball was made to traverse a square plate along a zig-zag groove, striking a catch at each end, so as to incline the plate for a new traverse, and so pendulating, it kept clockwork in motion, so long as it stood undisturbed, or until the material wore out.

Improvement of the Working-classes.—Since the opening of Peel-park, Salford, in 1847, upwards of a million persons have visited it. Since the Salford free library was opened, 150,000 volumes have been read, and since the opening of the lending department of the same library, about six months ago, 11,000 volumes have been issued to be read out of the institution.

Quivoy Church, in County Cavan.—On 4th instant, the ceremony of laying the foundation stone of the new church at Quivoy, in the parish of Drumlane, county Cavan, was gone through by the Countess of Lanesborough, in the presence of a large number of parishioners and others. Mr. Hague, of Cavan, is the contractor for building the church, the plans of which were prepared by Mr. Roderick Gray, of Enniskillen, county surveyor and architect.

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

MR. S. TUCKER, House Decorator, 234, High Holborn, has a VACANCY for an INDOOR APPRENTICE. He will be thoroughly instructed in the various branches of the business, and be treated as one of the family. A moderate premium required.

TO PARENTS AND GUARDIANS.

TWO ARCHITECTS, in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply, by letter, to A. B. 16, Waterloo-place, Regent-street.

TO PLUMBERS AND OTHERS.

WANTED, a WORKING FOREMAN, fully conversant with the laying of Mains, Services, and the general out-door work of a Water Company. He will be required to keep all books belonging to that department. Liberal wages with a residence will be given.—Further particulars may be obtained at the Office of the Secretary, 30, Bedford-street, Woolwich, to whom all applications and testimonials must be sent on or before October 26th, 1854.—By order of the Board,
A. J. BLACK, Secretary.

WANTED, a THREE-BRANCH HAND, as Plumber, Painter, and Glazier. A good plumber most essential.—Apply to Messrs. SEWELL, Longton-grove, Sydenham.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION, by an ACCOUNTANT of experience in extensive works on prime cost and pruning the trade's charges. No objection to temporary engagement in the country upon disarranged or accounts in arrear.—Address, Y. Z. Mr Curnick's, Carpenter and Undertaker, New-street, Battersea fields, Surrey.

WANTED, by the Advertiser, an ENGAGEMENT, either at the Bench, Fixing, or Jobbing, having filled a similar situation. Wages not so much an object as a permanency.—Address to A. B. 4, Pope's-Head-court, Bell-yard, Fleet-street.—N B. No objection to the country

TO ARCHITECTS, BUILDERS, AND CONTRACTORS.

WANTED, by an experienced Person, of middle age, a SITUATION, either in the Office of a Builder, or as Clerk of Works. Can have unexceptionable references as to character.—Address, free, to J. B. Mr. Low's, 31, Abchurch-lane, City.

TO SURVEYORS AND BUILDERS

WANTED, by the Advertiser, a Situation as Clerk, &c. Has a practical knowledge of building, and is familiar with Office duties. Security if required. Reference unexceptionable.—Address, A. C. Office of "The Builder."

TO TIMBER-MERCHANTS, &c.

WANTED, a SITUATION as TRAVELLER or SALESMAN, by a party of known experience in the trade.—Address, X. L. Office of "The Builder."

TO BUILDERS, DECORATORS, AND OTHERS.

WANTED, by a respectable Young Man, a RE-ENGAGEMENT as CLERK. He has had considerable experience in measuring, estimating, and bookkeeping. The highest references to his present employers.—Apply by letter, postpaid, to G. G. Mr. Dunsten's, News-agent, 44, Upper Ebury-street, Pimlico.

WANTED, by an experienced Man, in the trade, a SITUATION as FOREMAN, to undertake the entire management of a Brick or Tile Works, or to take the same by contract. First-rate reference can be given.—Address, X. Y. Z. Mr. London's, Burrough's-place, Hendon.

TO PLUMBERS AND BUILDERS.

WANTED, by a Young Man, a Permanent SITUATION as Plumber, Painter, Glazier, Gasfitter, &c. Address to G. R. Prince of Wales, Grange-road, Dalston.

TO BUILDERS AND CARPENTERS.

WANTED, to PLACE a YOUTH, of 17, in a COUNTRY SHOP, for about two years, where he would have an opportunity of obtaining a knowledge of carpentery, &c. He draws very well, and would soon be found useful. A moderate annual sum would be paid.—Address, A. M. care of Mr. Moger, Devonshire House, Holborn-bridge.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, of ten years' experience, an ENGAGEMENT, as SUPERINTENDENT of a BRICK-FIELD; can have an excellent reference.—Address, Y. Z. Mr. Haycock, Messrs. Lee's Brick-field, Upper Clapton, Hackney.

TO ARCHITECTS, SURVEYORS, &c.

WANTED, by the Advertiser, aged 19, a SITUATION in either of the above offices; has been for the last fifteen months in the office of a surveyor.—Address, J. B. 4, Edward-street, Woolwich.

WANTED, by a Young Man, aged 29, a SITUATION as PLUMBER, PAINTER, and GLAZIER. Address, H. K. 30, Parliament, Lambeth.

TO MASTER BUILDERS, PLUMBERS, AND GLAZIERS.

WANTED, by an experienced Man, a permanent SITUATION as PLUMBER. Has no objection to fill up his time in Painting and Glazing, if required.—For particulars, apply at No. 19, Torriano-avenue, Camden town.

TO PLUMBERS, BUILDERS, OR CIVIL ENGINEERS

THE Advertiser wants a PERMANENT SITUATION, in town or country, as WORKING FOREMAN, SUPERINTENDENT, or CLERK, having a practical knowledge of plumbing in all its branches, gas-work, water-works establishments, and a general knowledge of every description of trade in buildings. Can copy plans, specifications, and estimate if required.—Apply to A. B. at Mr. Rouse's, No. 5, Budewell-street, Bristol.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE Advertiser, aged 25, a neat draughtsman, thoroughly conversant with the routine of a builder's office, is desirous of a RE-ENGAGEMENT, either as office clerk, or to take charge of works. A moderate salary only required. Unexceptionable references.—Address, C. J. care of Messrs. Marshall and Tuthill, No. 15, Great Chapel-street, Westminster.

TO PAINTERS, GLAZIERS, &c.

THE Advertiser, a Young Man, who has been three years in the trade, wishes to place himself under an experienced hand for two years.—Apply, W. J. 10, John-street North, New-road.

TO ENGINEERS, ARCHITECTS, AND OTHERS.

THE Advertiser, who understands Surveying, Levelling, &c. and is a neat and expeditious Draughtsman, is desirous of an ENGAGEMENT, as a moderate salary.—Address, A. B. 4, Northampton-place, Canonbury-square, Islington.

TO ARCHITECTS.

A GENTLEMAN who has been nearly eight years in the profession, and has had great experience in detail and construction, is open to an ENGAGEMENT.—Address, G. G. 30, Michael's-place, Brompton.

TO BUILDERS.

A PRACTICAL SURVEYOR, Measurer, Estimator, and Builder's Accountant would be glad to undertake any business for builders at reasonable charges. Address B. C. Post-office, Mount-street, Lambeth.

TO ENGINEERS.

A YOUNG MAN, 25 years of age, who has had extensive practical experience in the manufacture of land and marine engines (has been with the latter at sea), is OPEN to an ENGAGEMENT. He is a good draughtsman and workman, speaks and writes German fluently, and is fully conversant with French. Can give unexceptionable references. Address, letters pre-paid, OMICRON, W. N. Horton's Library, Royal-hill, Greenwich

A PERSON, aged 34 years, a good practical Carpenter and Joiner, is desirous of a SITUATION as WORKING FOREMAN, having a good general knowledge in all branches of the building trade, and can produce satisfactory testimonials as to ability, &c.—Address, A. B. Mr. Kleine, 8, Bridport-place, New North road, Islington.

TO ARCHITECTS, CIVIL ENGINEERS, &c.

A SURVEYOR, of considerable practical experience, is desirous of meeting with gentlemen who would be willing to enter into arrangements with him either for measuring off artificers' work, making out specifications, and preparing estimates for projected buildings, railways, or other works of magnitude, surveying and valuing property, &c. For further information, apply either personally or by letter, to Mr. JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

AS ARCHITECT'S ASSISTANT, OR CLERK OF WORKS.

A GENTLEMAN from one of the first London Offices, is desirous of a SITUATION. He has had much practical experience in Gothic work, and is well acquainted with Italian, &c. Can give most satisfactory testimonials from gentlemen of high standing in the profession.—Address, L. I. Post-office, Charles-street, Fulham-road, London.

TO ARCHITECTS.

AN ASSISTANT will, in a few days, be open to an ENGAGEMENT, in town, country, or on the continent. Terms, two guineas per week. Satisfactory references.—Address, G. S. South Parade, Leeds.

TO BUILDERS AND CONTRACTORS.

A YOUNG MAN, who has served his apprenticeship to a respectable provincial firm, is desirous of EMPLOYMENT in the office or otherwise of a London house. Has had considerable general experience, but would accept moderate remuneration in consideration of opportunities of improvement. Unexceptionable references can be given. Address, free, to J. C. 54, Castle-street, Cambridge.

TO PAPERHANGERS, PAINTERS, BUILDERS, HOUSE AND ESTATE AGENTS

A YOUNG married MAN is desirous of ENGAGING HIMSELF to any of the above. Country preferred. Has a slight knowledge of graining. Wages not so much considered, if a permanent situation is offered.—Address, A. L. at Mr. Thorpe's, Boot and Shoe Maker, Stone, near Aylesbury, Bucks.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

AN ARCHITECTURAL DRAUGHTSMAN accustomed to prepare finished, working, and detail drawings, measure and price work, and set out quantities, is desirous of a RE-ENGAGEMENT. Salary moderate. Good references.—Address, R. B. 6, College-street, Islington.

TO BUILDERS

A YOUNG MAN, accustomed to the duties of a Builder's Office, and possessing a practical knowledge of the business, requires a SITUATION. Unquestionable references can be given. Address, E. R. 4, Wilton-terrace, Wilton-road, Pimlico.

TO ARCHITECTS, &c.

A PRACTICAL DRAUGHTSMAN and COLOURIST of some experience is desirous of a RE-ENGAGEMENT. No objection to the country.—Address, R. K. Office of "The Builder."

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLOURIST OFFERS his SERVICES in the preparation of perspective views, the tuition of backgrounds, and the introduction of landscape; also in general drawing and lithography. Terms very moderate.—Specimens of ability can be seen by addressing A. Z. 61, Denbigh-street, Belgravia.

A GOOD PLUMBER WANTS a SITUATION, or a JOB, in town or country. Good references.—Address, G. C. Office of "The Builder."

A PRACTICAL SURVEYOR, of many years' experience, wishes to make arrangements with architects for taking out quantities, and making drawings, &c. at his own residence. References given to works executed.—Address, E. W. Office of "The Builder."

TO ARCHITECTS, &c.

MENSURATION.—A practical Surveyor of some experience is prepared to give INSTRUCTION to young Architects, who may be desirous of making themselves acquainted with taking out quantities, abstracting, &c. For terms and particulars apply to Mr JOHN WEALE, Architectural Publisher and Bookseller, 59, High Holborn.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers.—For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 44, Robert-street, Chelsea, adjoining the King's-road Saw mills.

A CORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY has now on Sale Goods imported this year from the American and Baltic Ports. He asks special attention to the following:—

2,000 Pieces of Timber.
15,000 Planks, Deals, and Battens.

Spruce ditto	2s. 3d.	"	
Pine Planks, 12 3 by 11	6s. 0d.	"	
Spruce Paling Laths	10s. 6d.	per 120.	

An extensive Assortment of Veneers and Cut Stuff of every description always on hand, at equally low prices.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

MOULDINGS by MACHINERY: REDUCED PRICES.—ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent advance heretofore charged on the prices in their list is now removed Seasoned flooring at extremely low prices. St. Pancras Saw Mills, Cambridge-street, Old St. Pancras road.

TIMBER.—To RAILWAY COMPANIES, CONTRACTORS, BUILDERS, &c.—MACKINNON and CO. Commission Agents, Montreal, Canada, and Agents in North America for Messrs. Fairbairn and Sons, Manchester, &c. &c. are prepared to make selections and purchases in Canada, of oak elm, ash, birch, red and white pine, spruce, hacmatac, &c. either in bulk of specified lengths, or cut to any scantling, such as suitable for railway sleepers, railway waggon and carriage manufacture, flooring or roofing purposes, sheet piling, &c. &c. thereby saving waste, freight, and additional cost of cutting up in England. MACKINNON and CO. are also prepared to state prices (in sterling money) of above, delivered free on board, at Montreal or Quebec.

Montreal, 17th July, 1854.

References—Messrs. W. Fairbairn and Sons, Manchester; Messrs. Laurie, Clark, and Co. Liverpool.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country, an extensive assortment of specimens and patterns commencing at 1s per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 4a, and 56, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONDS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 30, North Wharf-road, Paddington.

WALNUT VENEERS, from choice Italian wood, TO BE SOLD VERY CHEAP, or would not object to take English or foreign wood in exchange for them.—Apply to EDWARD SIMMS, Timber-yard, Wilton-road, Pimlico.

WOOD and STONE CARVING WORKS, CAMBRIDGE.—TO BE SOLD, cheap, on account of its inconvenient height for the show-room, a NEW CAEN STONE FONT, and CARVED OAK COVER, complete, executed in the best manner, being intended for exhibition. It is copied from the ancient one at Castle Acre Church, Norfolk, and would form an imposing object in a good position.

For price, and Engraving to a large scale, apply to Mr. RATTEE,

Manufacturer of Church Fittings, Organ Cases, Antique Furniture, &c. and Contractor for the general Restoration of Churches.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent street, and at his Steam-works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York-road, Lambeth (late Shop Foreman to Messrs. Lawrence and Sons), Sash, Door, and Staircase Manufacturer, with well-seasoned materials and superior workmanship, at the lowest possible prices. Planed and polished goods securely packed for the country and for exportation.—P.S. A full list of prices sent on application.

LEONARD SUGDEN, Manufacturer of Doors, Sashes, and Frames, and Joiner to the Trade, 39, Grange-road, Bermondsey, respectfully invites Builders and the Trade in general to an inspection of his Stock of Goods, from which they can always be supplied with every kind of Joinery work, which for superiority of workmanship, material, and prices, cannot be equalled by any house in London.—P.S. A full list of prices on application.

BARROWS and LADDERS.—J. BARNES, Wheelwright, Manufacturer of every description of Barrows, Ladders, Painters' Steps, Machines, &c. The best Navvies' Barrows in London, 12s each.—2, York place, Pentonville-hill.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small cities. Builders and Plumbers supplied with the ascension Filters at trade prices. These filters, at one, two, or four guineas each, yielding 30, 100, 150, and 200 gallons per hour, will be found sufficient for ordinary domestic requirements, self acting, and not liable to get out of order. Reservoirs, cisterns, &c. of any size satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the Filtering Stone Manufactory, 33, Southampton-street, Strand, Portman-square, London.

LONDON THOROUGH second route to Cheapside and effective. The Chancery-lo ringdon Hill and traffic ge under Brandi, ether in the dry state or ground in oil up this qualities, is peculiarly applicable to first-class decorations and House Painting. For Iron it possesses great affinity, and new is preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and Strata successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more of economical in first cost, and covers equal to any known pigment.

OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

par SSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

stre

lan

from

HE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and His Brilliancy of surface; it is unaffected by sulphurous or any other impurities in the atmosphere. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all warments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive trash to the owner of the premises painted with them.

The VIEILLE MONTAGNES ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court New road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk street, Liverpool who are also acknowledged Painters to the Company. For Zinc Paints, and undertake painting shops, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by the cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined in which excellence of no paint, it ranks alone. Con ra tors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures containing frequently pernicious ingredients, are baneful to health and worse than useless, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

If not so marked, the reason may be inferred

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccos dry quickly and can be painted up within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

---

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cement-tous properties; that it is not affected by frost, fogs, or damp, as in many situations, and as out of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT.—ASPDIN'S PATENT.

ASPDIN, OAKLEY, and CO. have much pleasure in informing Professors of this valuable Cement, that they have, by means of recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement, without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are many imitations sold as Portland Cement resembling it only in name.

ASPDIN, OAKLEY, and CO. beg to call attention to their SECOND MANUFACTURE, which is equal, if not superior, to most of the Cements hitherto produced, and is considerably cheaper.

Report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Offices, New Wharf, Abbotson-street, Westminster; at their Works, the Head-on-Thames, Messrs. Rosher's Wharf, Hilsea-street, Battersea, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY HARRISON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS, Swanscombe, near Northfleet, KENT.—Messrs. ROBINS and CO. with pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the average increasing demand for their Cement; and are now enabled to supply any quantity of the very best PORTLAND CEMENT manufactured by them for all the purposes. Cement is received at Great Scotland-yard, and at the 6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above-superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq., at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works, situate near Bristol, on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consistency regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Mill-le Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

---

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great set making, combined in which this kind of lime yield, prohibition wet and damp situations, such as wharf-walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The setting qualities are guaranteed by engineers, Architects and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements, of the best quality

SEconds, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

TERRA-COTTA.—Statues, Statuettes, Vases, Trieze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pemberton-row, Gough-square, where prices and designs can be obtained. Specimens of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici and the colossal Triton in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian roofs is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAINTING is the result of practical experiments and long experience; it is unfailing in its application, entire success having been proved in few days after plastering. In repairs of old plastering it is invaluable. A wet brick room can be prepared for Paint. Prepared only by W. J. STENT, Warminster, London Agents, Messrs. JAMES and G. WILLIS, 64, Long-acre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

MAW'S ENCAUSTIC TILE PAVEMENTS. A highly durable and decorative substitute to ordinary flooring and other perishable oil-cloth coverings; for entrance halls, passages, verandahs, conservatories, &c.

MAW and CO. Manufacturers of THE SUCCESSFUL IMITATION OF THE TOP ORDER OF ALEXANDRINE'S in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE COURT, Crystal Palace (M. D. Watt, esq. in "Official Handbook"), and, free of expense, their pattern and price book Benthall Works, Broseley, Salop.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability; Slabs and Tiles for Fire-places and Hearths, Coun...s for Grates, Dog or Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 5, Albion place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 55s. per 1,000; Floor Bricks and 6-inch Pavings, at 40s. per 1,000; 8-inch Pavings, at 80s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

BRICKS.—From Kent-fields.—Grey stock, shipping, paviors, &c. of superior quality; also, white Suffolk, and red facings.—W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests Merchants to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 37, Newington-Crescent, Newington-butts.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED MALM HOUSE, WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods: Fire Bricks, Lumps, Tiles, and Clays. Patent Malting and Cross-drying perforated Tiles, real Dutch Clinkers, River sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—In Office, 37, Regent-street.

TO BRICKMAKERS AND OTHERS.

WANTED, ONE, TWO, or THREE MILLION of STOCKS, to be delivered alongside in the River Thames. Also same in the Regent's Canal. Particulars, stating to test price, to be sent to A. J. B. Robson and Co. Belmont-wharf, York-road, King's-cross, Islington.—Oct. 19, 1854.

500,000 STOCKS will be SOLD by AUCTION (to clear the field), close to the siding of the Wimbledon Railway Station (in lots to suit purchasers), on THURSDAY, the 26th of OCTOBER.—Further particulars, with bills, may be had at the Railway Station, and Inns in Merton or Wimbledon, and at 189, Waterloo road, a few days previous.

WANTED, from 50,000 to 60,000 of good sound old PLAIN TILES, delivered into trucks at Brick-lane Station.—Address, post-paid, on or before the 25th, with lowest price, to C. A. B. Office of "The Builder."—10,000 to be delivered weekly

---

WANTED, THREE ACRES of BRICK-MAKING EARTH, near London. Also Half a Million of capital BRICKS TO BE SOLD cheap, as the ground must be cleared by Christmas.—Apply to Mr. KEYMER, Crown and Anchor, Temple-street, Hackney-road.

WOODBRIDGE WHITE BRICK MANUFACTORY. THREE HUNDRED THOUSAND SUPERIOR WHITE STOCK BRICKS, of very superior quality, FOR SALE.—Apply to THOMAS PEAKE, Woodbridge.

CRYSTAL PALACE GENERAL ARRANGEMENTS. The Palace is opened on Mondays at 9 a.m. and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m. On these days the charge for admission is One Shilling. It is opened on Saturdays at noon, on which day the charge for admission is Five Shillings.

SPECIAL TRAINS will run from London Bridge to the Crystal Palace Station every week-day as follows: at 7.10, 8.10, 9.10, 9.40, 10.10, 10.40, 11.10, 11.40 a.m. and 12.10, 12.40, 1.10, 1.40, 2.10, 2.40, 3.10, 3.40, 4.10, 4.40, 5.10 p.m.; returning from the Crystal Palace at 11.50 a.m. and 12.20, 12.50, 1.20, 1.50, 2.20, 2.50, 3.20, 3.50, 4.20, 4.50, 5.20, 5.50, 6.20, 6.50, 7.20, 7.50 p.m.; such further additional trains will run whenever the traffic renders it necessary.

The 7.10, 8.10 and 9.10 a.m. Down Trains, and the 4.50, 5.50, 6.50, and 7.50 p.m. Up Trains will call at New Cross and Forest-hill. The Croydon and Iron Companies' steam-boats will run from their several piers to the Surrey side pier at London bridge, at least every ten minutes during the day, and at those hours, when increased numbers require it, every five minutes. Tickets to the Palace, including conveyance by railway, can be obtained at these piers.

The following are the fares to the Crystal Palace and back, including admission to the Palace:—

Shilling Days	.....	First Class, 2s. 6d.
" "	.....	Second Class, 2s. 0d.
" "	.....	Third Class, 1s. 6d.
Saturdays	.....	First Class, 7s. 0d.
"	.....	Second Class, 6s. 6d.
"	.....	Third Class, 6s. 0d.

In order to afford every facility to the public, and to prevent any delay at London bridge, arrangements have been made to issue the above tickets previously, at offices in different parts of London. Passengers taking their tickets at the offices will be admitted to the London Station by a separate entrance.

Parties intending to return from the Crystal Palace Station, not including admission to the Palace:—

Single Tickets	.....	First Class, 1s. 3d.
"	.....	Second Class, 1s. 0d.
"	.....	Third Class, 0s. 9d.
Return Tickets	.....	First Class, 2s. 0d.
"	.....	Second Class, 1s. 6d.
"	.....	Third Class, 1s. 0d.

The last-named tickets can only be obtained at the London Terminus, and at the Company's Offices, 15, Regent-circus, Piccadilly.

Special first-class return tickets from London-bridge to the Crystal Palace Station, and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d. each. These tickets can only be issued upon production of a season ticket to the Crystal Palace.

Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.

No change can be given either at the London bridge, or at the Crystal Palace Stations; passengers must therefore provide themselves with it if necessary at ver.

Children under twelve years of age will be charged only half the above rates.

Season tickets, including conveyance by railway, 42s. each; without conveyance by railway, 21s. (at the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,

August, 1854.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian, 9d. per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; patronated zinc blinds, in discs, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application. Post-free

J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

J. TARRILL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th From its lightness, a building only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 36s. per ton Importer of Trinidad Asphalte.

Shipping Depôt, Dervis Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, PORCONFAUS BITUMEN PAVIMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 5 per cent on their mouldings as advertised on the 8th of November last is removed, from this date, consequently the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

TO CONTRACTORS, BUILDERS, AND OTHERS

TO BE SOLD, TWO good working CART-HORSES (bays), eight years old. They have been working together in a brick waggon, and in brick carts. These horses are very fast walking. Price 28l. each. Also, a nearly new BRICK WAGGON. Price 6l. Apply, by letter, in the first place, to G. H. Office of "The Builder."

TO BE SOLD, by PRIVATE TREATY, a GASHOLDER 24 feet 6 inches in diameter by 12 feet deep, with suspension chain and weights. Also a wrought-iron TANK, 21 feet 1 inch diameter by 12 feet deep, with angle rods, &c. A STATION METER to pass 5,000 cubic feet of gas per hour. A sixteen 6-inch pair CONDENSER, with bottom box complete. The whole of the above are in a sound condition, and in good working order.—For particulars, apply to J. EUSTON, Jun. Gas Works, Northampton.

TO BUILDERS, CONTRACTORS AND OTHERS

VALUABLE new, interior CHAPEL FITTINGS, executed to order, but not now required. TO BE SOLD by PRIVATE CONTRACT, without reserve, and may be seen at Mr. SNEEZUM'S, Builder, 5, Rupert-street, Haymarket. They consist of an excellently well made modern pulpit, with clerk's desk, stairs to ditto, with mahogany rails and turned balusters complete, and painted in two coats; also, eighteen pairs of circular-headed sashes and frames, 17 feet 6 inches, by 4 feet 9 inches.

SEVERAL INVESTMENTS WANTED immediately, by Capitalists, who are seeking to invest various amounts in any secure way, at a moderate rate of interest. The persons selling their properties may retain power to repurchase after a fixed period, if so desired.—All applications to be made to Mr. ALFRED COX, Estate Agent and Auctioneer, 68, New Bond-street.

LOANS.—Persons desirous of obtaining ADVANCES, from 50l. to 500l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES.—Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d. each copy, or 1s. per post.

CHARLES JAMES THICKE, Resident Secretary.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—MURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

THE ARCHITECTURAL and CIVIL ENGINEERING CLASSES, 34, Guildford-street, Russell-square, are OPEN for the reception of PUPILS, at one Guinea per Quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c. and instruction in architectural and civil engineering, drawing and colouring, working drawings, specifications, taking out quantities, estimating, &c. &c. For prospectuses, apply to Messrs. HYDE SMITH and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

TO ARCHITECTS, BUILDERS, AUCTIONEERS, &c. requiring Assistance in Preparing, Working or Finished Drawings, Taking out Quantities, &c. &c. The Advertisers are prepared to undertake the same at moderate charges.—Apply at the Architects', Builders', and Civil Engineers' Drawing Classes, 15, Old-street, City-road.

N.B. Clerks sent to trace drawings and copy specifications for builders.

THE ARCHITECTS', BUILDERS', CIVIL ENGINEERS', MACHINISTS', and OPERATIVES' DRAWING CLASSES, for the Study of Architecture, Civil Engineering, &c. Conducted by T. J. HILL, Architect, assisted by Mathematical and Mechanical Masters. Day and evening instruction given in all kinds of drawing connected with the above subjects; also in colouring, preparing specifications, taking out quantities, &c.—Prospectuses, &c. on application at the New Offices, 15, Old-street. Gentlemen are informed that no places can be kept after the 30th OCTOBER instant.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough street.

ARCHITECTURAL OUTLINES, coloured and embellished with landscape (for competition or exhibition), by GEORGE CHILDS, 12, Amwell-street, Pentonville.

LIFE ACADEMY (late of Margaret-street) for ARTISTS and AMATEURS. Open Three Evenings a week, Subscription Three Guineas a year.—For further particulars, apply at the School of Art, 21, Bloomsbury street, Bedford-square.

QUANTITIES, Measurements, Dilapidation Surveys, Building Accounts, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country requiring a practical and experienced SURVEYOR, would find prompt and unbiassed attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 63, St. Martin's-lane and Acton-hill.

TO THE CLERGY, ARCHITECTS, and CHURCHWARDENS. GILBERT J. FRENCH, BOLTON, Lancashire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., requests immediately to all inquiries addressed to him at Bolton, in which place only orders are executed. He respectfully invites direct communications, as by far the most economical and satisfactory arrangement. Parcels free at the principal Railway stations.

PARTNERSHIP WANTED.—An Assistant of and Surveyor, who has been in practice about three years in a rising town in the south of England, is desirous of meeting with a Gentleman, with from 300l. to 500l. capital, to enter into the business as an active PARTNER.—Address, Messrs. Job, Brothers, and Co. Wellington-chambers, Cannon-street, London.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, in Town or Country.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION and perfect principle, improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles or planks; and engines of various powers, for wells of any depth.

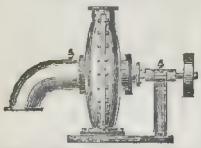
PUMPS on HIRE! The largest stock in England of single and double pumps, from 4in. to double 12in. barrels, prepared for hand, steam power, ready for use on reasonable terms, at

BENJ. FOWLERS, Hydraulic Engineer, Hot-water, Steam, and Gas-Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump £1 15 0
Patent Pump, with 1 foot of lead pipe attached and bolts and nuts ready for fixing 2 0 0
Larger sizes if required.



The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in Town or Country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS, 6, CRESCENT, JEWIN-STREET, LONDON.

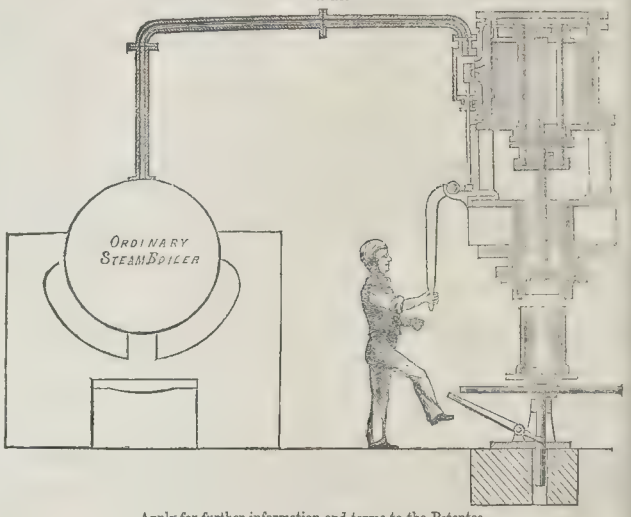
Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.

BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick-makers, Well-sinkers, Excavators, Plumbers, and others requiring water or other liquids hot or cold raised or forced, will find it greatly to their interest to use GWYNNE and CO'S PATENTED PUMPS. For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong wagon-wheels, iron chimney horse stands complete, strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS, Engineers and Portable Engine Makers, 56, Blackman-road. These engines have been successfully employed for years



LEATHER BANDS for DRIVING MACHINERY (EDWARD'S PATENT).—Engineers, Millowners, Printers, and others using bands for driving machinery, are respectfully invited to inspect EDWARD'S IMPROVED FOLDED FLAT and ROUND LEATHER BANDS (the round bands from 1 inch to 7 inch diameter), which for strength, durability, and straightness in working, surpass any bands at present in use. Manufactory, 32, Great Sutton-street, Clerkenwell.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and sewage pipes. Being a non conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch Proprietors' tubing having resisted a pressure of 250lbs. on the square inch, without bursting. The sizes or bores may be had in 100 feet, or any shorter or longer length. The joints are easily made. As a conductor of sound it is most valuable for connecting the wires in PROFESSOR WHEATSTONE'S TELEGRAPHIC INSULATED CIRCUITS WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

THE PERMANENT WAY COMPANY, 29, Great George-street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways which are adopted and being adopted in various parts of the world of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

TARPAULINS for COVERING ROOFS of Corn Stacks, SCAFFOLD CORD and every description of CANVAS WORK, Builders supplied upon the lowest terms. Marquees and Tents for Sale or Hire. Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Builders having works to execute south west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 6, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 32.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 30 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON, Brass and Iron Founders, Short-street, New cut, Lambeth.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connel's Registered Model Water-closet."—This water-closet is the most natural element yet introduced for the purpose, and for baths without the usual service-box or flushing. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

DOULTON AND WATTS,

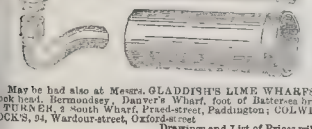
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.



GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

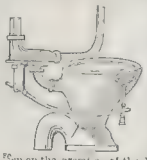
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock head, Bermondsey, Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kings-road, Camden New Town; J. TURNER, 2 South Wharf, Praed-street, Paddington; COLWILL Brothers, 32, Brydges-street, Covent Garden, and at EDWARD COCKS, 94, Wardour-street, Oxford-street.



Drawings and List of Prices will be forwarded free, on application.

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in its manufacture, which is equally calculated to render the surface in the driest unimpassible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rabbet and Co.'s Wharfs, Kings-road, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney. Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corber's Depôt, Britton-street, Chelsea: and at the Pottery.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London. Particulars forwarded on application.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MONTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (to accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Junctions, &c. Every article in Stone Ware on reasonable terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

HAYES, BROUGH, and CO.

Works: Llwynonion, near Wrexham.
Offices: 11, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN PIPES JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first class quality

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES & CONTRACTORS.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inches to 36 inch. Patent Hydrants, self-closing Cocks, Bibs and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Civil Engineer, 70, Strand, and Upper Marsh, Lambeth.

ISAAC PARRY'S POTTERIES, Corner of Church-lane, Church-street, Deptford, Kent, beg to invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in the GLAZED WARE for sanitary and other purposes; likewise Chimney-pots, &c. The only manufactory in the neighbourhood.

YORKSHIRE. Important Sale.—Desirable investment in a delightful district. Valuable property, consisting of a gentleman's residence, Mr. Kirk would invite [illegible] farmers, landed and cottages in the best part of Craven. The attention of the [illegible] and [illegible] is respectfully solicited to the undermentioned [illegible] as it [illegible] the best opportunity for any capitalist to invest his money in one of the most substantial and picturesque [illegible] in Craven, Yorkshire. This delightful residence is situated in the banks of the river Aire, at commanding [illegible] views of the most romantic and beautiful scenery, whilst its localities present attractions unrivalled by any estate in the kingdom. In its immediate neighborhood may be enumerated the princely domain of the Duke of Devonshire, Bolton Abbey, Skipton, with its ancient castle; the meandering Aire, the [illegible] valley and the towering rocks; and in the compact villa is grac[illegible]y all that art and nature can command. Hunting, fishing, and shooting can here be indulged in at pleasure; whilst in a business point of view, it possesses every advantage, [illegible] as the railway is close at hand, and affords every facility to the traveller, or for transit of goods of every description. [illegible] situation.

MR. WHEATLEY KIRK has the honour to announce that he will SELL this PROPERTY by AUCTION, in the order or lots as below, at the house of Mr. Thomas Milnbrook (SWAN INN), GARGRAVE, in the county of York, on MONDAY, the 20th day of OCTOBER instant, at SIX o'clock in the Evening, subject to such conditions as will be then produced, viz.:—

Lot 1. All that substantial and compact DWELLING HOUSE, now in the occupation of George Arthur, Esq. the owner (who is leaving the neighbourhood), situate at the outside of the town of Gargrave, on the banks of the river Aire, and within a quarter of a mile of the railway station on the North-western portion of the Midland Line, and surrounded by some of the most beautiful and romantic scenery in the fair famed Craven district. The house, which is in a thorough state of repair, contains dining, drawing, and breakfast rooms, with capital kitchen, scullery, wash-house, beer-cellar, and [illegible] wood, and is fitted up with hot and cold water baths, and every convenience and comfort requisite for a gentleman's family. The grounds, which are tastefully laid out with fountains, in gardens, shrubberies, parrees, [illegible] orchard, &c. comprise (including the site of the buildings) 1a. 3r. 4p. statute measure, or thereabouts. The outbuildings consist of carriage-house, stabling, [illegible] house, [illegible] and [illegible] fowleries, &c. There is a most excellent wrought-iron water-cistern at the back of the premises erected by the present proprietor, containing 1,500 gallons; also a [illegible] near the farm-yard, holding 9,000 gallons. The above property is held under a lease for the residue of a term of 880 years, subject to a nominal rent of 5s. 2d. per annum; and the purchaser of this lot will be entitled to the use of the pew in the parish church of Gargrave, which is within five minutes walk of the house.

Lot 2. A small piece of FREEHOLD LAND, near to the above, containing about 800 square yards, now used as a vegetable garden; the soil and situation rendering it one of the most productive in the country.

Lot 3.—All those FOUR CLOSES, FIELDS, or PARCELS of FREEHOLD LAND, situate in the township of Gargrave aforesaid, containing 9a. 0r. 0p. or thereabouts, being the whole of the property of the late Mr. Joseph Smith, deceased, and which is a special and important part of the purchase; also a most extensive and valuable bed of fire clay, within 9 inches of the surface, and which is now being worked up by steam into bricks, tiles, chimney-pots, &c. &c., and with this lot will be sold all the capital tilery plant, utensils, 10-horse high pressure steam-engine and boiler, clay-mills, and machinery, [illegible] sheds, &c. &c. now standing thereon, and which are in excellent condition, and on the lowest and most approved principle.

Lot 4.—All those SIX recently erected, tastefully-built COTTAGES, or [illegible] situate at the outskirts of Gargrave aforesaid, together with the land now used as gardens, and which [illegible] to the first-named cottages, with the site of the said [illegible] two rows of three cottages.

The house and grounds forming lot 1 may be viewed any day between the hours of [illegible] and FOUR by applying to Mr. Peter Mason, in the premises, who will also show the other lots; and for any further information, application may be made to George Thornton, on the premises; or to the Auctioneer, Cross-st. Chambers, Cross-street, Manchester, or 4, Kirkgate, Leeds; or to Messrs. Bives and Bibkbeck, Solicitors, Town hall Chambers, Fenwick-street, Manchester.

NOTICE TO NAVY CONTRACTORS, SHIP BUILDERS, TIMBER MERCHANTS, AND OTHERS. Extensive Sale of fine large naval oak, elm, ash, Beech, and other Timber, standing in the Woodmans and Brimpts Estates, [illegible] Lymington and Newburn, and within easy distance of the Weeburn Station, on the Bishop and Basingstoke Railway, and Alresford Wharf, on the Basingstoke Canal, Berks.

MR. ALEXANDER DAVIS is honoured with instructions from the Right Hon. Lord Viscount Eastnor, to SELL by AUCTION, at the PALMERSTON ARMS INN, Wolhampton, Berks, early in the month of DECEMBER, 1884, a very heavy fall of fine old ENGLISH TIMBER.—Full particulars in future papers.

THE late Mr. Woodburn's GALLERIES and PREMISES, 150 feet in depth, being No. 112, St. Martin's-lane, TO BE LET for Eight Years, the residue of a term, or for a term of Twenty-one Years. To be viewed on application at the house. Further particulars to Mr. LAILEE, at his only Offices No. 6, New Bond-street [illegible].

BUILDING GROUND TO BE LET.—KING'S CROSS, opposite the Station (Houses or Factories). PADDINGTON, near the Railway Station (Villas). ST. JOHN'S WOOD (Villas and Mews). WIMBLEDON PARK, near the new Station (Villas). VAUXHALL, abutting on the Station and River an extensive Wharf and Warehouses, Freehold, to be Sold.
Apply to NELSON and INNES, Architects, 33, Regent street.

EXTENSIVE and commodious BUILDING and YARD, known as the "Bishopsgate Workhouse," situate in Dunning's-alley, Bishops, gate, is TO BE LET or SOLD. The building is very capacious, and well adapted for factories or warehouses. The extent of ground is about 147 feet frontage on the south side of Dunning's-alley, and of an average depth of 77 feet from north to south. Tenders are to be sent on the 24th or NOVEMBER next, to the Office of Mr SMART, 25, Sun-street, Vestry Clerk.—Further particulars required may be had on application at the Vestry Clerk, or of Mr. MEREDITH, No 7, Great Winchester-street, Broad-street.

DESIRABLE PREMISES, in the City of London.—The Trustees of Lord Viscount Sudbury's Charity Estates, situate in, respectively, Crutched-friars, Johnson-street, and Gunpowder alley, hereby give notice, in regard to those premises thereof which consist of a dwelling-house and premises, No. 13, Crutched-friars, a building having frontage to John-street (containing, at present, a committee-room, with enclosures below same); and in the rear thereof, but in connection with it, and fronting Gunpowder-alley, considerable plot, with divers buildings thereon; also an open yard, &c. used respectively, in former years, as a Poor-house, that they will meet at the said committee-room, on THURSDAY, the 16th day of NOVEMBER next, at TWELVE o'clock at noon, for the purpose of receiving sealed Tenders, for the taking the said premises, either in one lot or in separate leases, for terms not exceeding, in any case or cases, sixty-one years.—Further particulars may be known on application, between TEN and FOUR, at the Offices of Mr. GARDINER, Architect and Surveyor to the Trustees, No. 4, Bank-chambers, Lothbury.

BUILDING LAND TO BE LET, at CARSHALTON, Surrey, near the Station of London and Epsom Railway. Plots of land, 3 acres, on lease, 30 years, with ground-rents and advances made to the extent of 85 per cent. Apply to Mr. FRANCIS E. H. FOWLER, Architect, 4, Garden-court, Temple.

BUILDING GROUND.—TO BE LET, in the populous and highly respectable neighbourhood of Euston and Gordon squares. GROUND suitable for a public building.—Apply at Mr. GRAHAM'S Office, 14, Taviton-street, Euston square.

KENT—CHISLEHURST.—TO BE LET, on Building Leases, in this delightful, healthy, and much-frequented locality, on the boundary with pleasant walks and drives, THREE PLOTS of FREEHOLD LAND, together about six acres in one or more lots, most picturesquely situate, with extensive views to the south, and a few minutes walk from the Railway Station. For particulars, apply to Mr. WM. DREW, Morden Wharf, East Greenwich.

LANDING WHARF and DRAWING DOCK, LETTS WHARF, near Waterloo-bridge, Surrey side.—This commodious premises is offered at this extensive wharf, for landing, shipping, drawing, and warehousing goods. English and foreign timber, iron, stone, bricks, sand, coals, &c. &c. 150 feet-river frontage for floats of timber, large sea-craft, a thirty-ton crane for heavy goods, boilers, &c.; also a ten-ton crane.—Apply to ROUTLEDGE and SON, on the Wharf.

TO SMALL CAPITALISTS.—SUTTON, Surrey.—TO BE SOLD, ONE or TWO FREEHOLD GROUND RENTS, well secured, to pay good 4l. per cent.—Inquire of Mr. POTTER, Sutton.

TO PAVIORS and OTHERS, who may be desirous of purchasing a SIX-ROOMED CARCASS, 28 feet frontage, of good elevation. The value if same will be taken part in paying for a SHOP.—Apply to R. H. MOORE, Esq. Architect, 4, Queen's-terrace, Regent's-park.

TO CARPENTERS AND OTHERS.

TO BE SOLD, one or more Six-roomed CARCASSES, on very advantageous terms. They are in one of the healthiest situations in Kentish-town. Carpenter's work would be taken in payment of the same. This would be a good opening for those with a small capital, or members of building societies wish to secure a winter's work.—Apply to J. BAUGHAN, 12, Grafton-crescent, Victoria-road, Kentish-town.

NATIONAL FREEHOLD LAND SOCIETY, No. 14, Moorgate-street, London.—The Kingston-hill and Bridge-house Estate will be READY for SALE on MONDAY [illegible] inst.—Plans, with conditions of sale, may be had after the 19th inst. W. E. WHITTINGHAM, Secretary.
October 11th, 1884.

TO ENGINEERS AND OTHERS.

MASONS' PROVIDENT INSTITUTION, for Granting Pensions, and the Erection of an Asylum for Aged and Decayed Masons, their Widows and Orphans.—The Managing Committee beg to announce, that they have engaged the Royal Surrey Theatre for a Dramatic BENEFIT in AID of the FUNDS of the above INSTITUTION, on WEDNESDAY, NOVEMBER 15, 1854, when the support of the public and the members of the trade is earnestly and respectfully solicited by the Managing Committee. Tickets may be obtained of the Box-keeper at the Theatre; at the Committee-room, Hawkeston-hall, Warden-road; of Mr. W. J. Gray, Colchester, 114, Tollington-street, Vauxhall bridge-road; or of the Secretary, who, if desired, will have much pleasure in attending with plan of theatre and particulars of private boxes. WILLIAM DIX, Secretary.

14, William street, Hampstead-road.

TO CARPENTERS, JOINERS, AND BUILDERS IN GENERAL.

THE SOCIETY, No. 13, F.S.O.C. formerly meeting at the Globe, King-street, Clerkenwell, will, in future meet at the ADAM AND EVE, St. John-street-road, opposite Middleton street, Clerkenwell, aforesaid, where men of the above trades are invited to join, whereby they can insure their tools lost by fire, as well as secure 8l. at the death of a member, and 4l. at death of member's wife, at a small entrance-fee and 2d. per week after. Also employers can be suited with men to all the above branches, or as leading men in taking the management, either in town or country. J. REDWAY, Secretary.

23rd October, 1854.

COMPETITIONS.

TO ARCHITECTS

PLANS are wanted for a NEW CHAPEL, in Mare-street, Hackney, to seat comfortably not less than 1200 persons. A Gothic design will be admitted in preference, nor any whose estimated cost is excessive. Schools and a secondary Chapel upon the basement. The successful applicant will, at the discretion of the Committee, either have the superintendence of the works, or be paid a premium of 2l 2s. for his plans, designs, and estimates. The ground may be viewed, and further particulars learned, upon application to Mr. POWELL, upon the premises. The designs to be sent to Mr. ALFRED TOZER, Secretary, 12, St Thomas-square, Hackney, on or before the 15th NOVEMBER, 1854. Each plan must be marked with a distinctive motto, and accompanied by a sealed letter marked with the same, containing the author's name and address, which will be returned to the unsuccessful competitors.

TO ENGINEERS, SURVEYORS, &c.

THE SURVEY of the portion of the parish of Wallasey to which the Public Health Act, 1848, is applied, being now ready, the Local Board are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES of a SYSTEM of SEWERAGE for effectually draining that district. Premium of 10l and 5l respectively will be given to the authors of the two plans most approved of, such plans to contain all information regard no materials, &c. necessary to their being properly carried out, as far as practicable, means for preserving the sewer or gutter for agricultural or other purposes. The survey of the parish will be at the temporary office of the Board, Queen's Arms, Liscard, between the hours of NINE and ELEVEN a.m. from WEDNESDAY, the 18th instant, till SATURDAY, the 18th of NOVEMBER next, where any additional information may be obtained. Four plans at least, from as many different competitors, must be sent in; three of the premiums will in no case be awarded. The plans, specifications, &c. signed with a motto or device, and accompanied by a letter marked with a similar motto or device, enclosing the name and address of the author, to be sent to the Office of Mr HASSALL, Solicitor, 3, Old Churchyard, Liverpool, on or before the 21st day of DECEMBER next.—Dated 12th October, 1854.

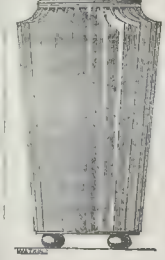
Bury, Lancashire, October 26, 1854.

THE ONLY STOVE WITHOUT A FLUE, JONES'S PATENT.—Plain, from 18s. to 48s.; Ornamental from [illegible] for warming halls, passages, greenhouses, [illegible], shops, storerooms, [illegible] requiring a [illegible] heat. [illegible] may be seen in operation at 3, NASH, Hanover-st., [illegible], and at the Offices of the Newcastle-street Lock-up, PAVEMENT PREPARED [illegible] IRON, [illegible] CAST IRON PAVEMENT LIGHTS, [illegible] IRON, with perfect cleanliness, for twelve hours, with one [illegible] five [illegible] report, forwarded free.

THE SMOKE-CONSUMING STOVE, in [illegible] labour [illegible] rate of [illegible] the average [illegible] of life. [illegible] Improved Circular Valve, a perfect system [illegible] Patentee by D. and E. BAILEY, 272, Holborn.

CUNDY'S PATENT PURE WARM AIR STOVES.—The only pedestal stove which gained a Prize Medal (class 27) at the Great Exhibition in 1851, especially adapted for warming with great economy churches, chapels, schools, entrance halls, and factories. Can be purchased only at the manufactory of CUTLER and SON, Commercial-road, Nos. 18, Great Queen-street, Long acre, where a large stock is always ready for immediate delivery.

DOMESTIC FIRE-PLACES.—The SAVING of COAL and the BRIGHT SMOKELESS FIRE produced by RAWE'S PATENT STOVE, render it a most important improvement in domestic fire-places. Arrangements are made for furnishing it in any pattern of stove that may be selected. Licenses will be granted. A prospectus may be had on application to J. RAWE, Chesnut-cottage, Haverstock-hill, Hampstead, where the stove may be seen in use any day after Two P.M.



DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at Messrs. EDWARDS and SON'S, 23, Poland-street, Oxford-street. By this grate a smoky chimney is rendered no chimney as regards smoke, and a saving of at least thirty per cent is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and their pedestal stoves. Old grates are altered to this principle. Prospectus sent on application.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle, for Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all sizes, from 1l. DEFRIES'S celebrated GREY GAS METERS, upwards of 40,000 in use. See testimonials at the Office, 145, Regent-street, or at the Manufactory, New-road, St. Pancras, near Fitzroy-square.

EXHIBITION STOVE.—RETTIE'S PATENT.—CAUTION.—Several Medals were given for grates on the above Stove. E. M. and M. RETTIE can forward to Scotland or Ireland, or any part of England, the above, suitable for churches, public hospitals, or private buildings, or drying-rooms, or to warm the passage ships, hot houses, &c. &c. Price from 4s. to 2l. each, burning only from 9d. to 3d. per hour, and warming buildings from six to thirty rooms; and no pipes required throughout the building, nor risk of fire), giving a pure warm air, without destruction to the appearance of the building, and [illegible] the pure ventilation at the same time.

Circulars, by letter, to the Agent, 7, Brompton-road, when grates will be forwarded by enclosure of stamp, &c. of the "Non-parcel Gas burner," &c. &c.

Sinks, Cisterns, Curbs, and the abolition of all chimney-cans, &c. from the top of buildings. Also, sanitary Improved Kitchen, Bath, and Sewer Traps, on the newest and simplest form, preventing all effluvia, for public streets or private buildings.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Shops, Warehouses, Hotels, and Others, require no Flue, create no Dust, and are safe from all risk of fire.

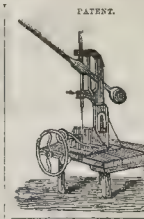
Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus as yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to SYLVESTER and Co. Engineers, and Manufacturers of Heating Apparatus, 99, Great Russel-street, Bloomsbury.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork, WARM AIR Apparatus, &c.—Apply to S. S. TAYLER, Engineer, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KINGS-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, [illegible], and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the late Rev. H. J. Boge's, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, [illegible] economical in the working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.



TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks and houses, is attained by the BELEVENS PATENT CALORIFERE, [illegible] in twenty-four hours about [illegible] of water, without altering the finest [illegible] or impairing the colour of the most precious [illegible]. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of [illegible] stones, or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood paving Company's Works, Pimlico; at Mr. Mackenzie's Contract, of Victoria-street, Westminster; Vogan, Son, and Raymond, Dockhead; and several maltsters, millers, and manufacturers in London and country.—Apply, per post, to T. BELEVENS, Engineer for French Flour Mills, Turbines, &c. 55, King William street, City.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in stock, also fire and furnace bars, ornamental and plain [illegible], [illegible], double doors, and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, [illegible] valves, copper pipes, [illegible] elbows, & sales, [illegible] brass [illegible] and pipes of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark Bridge.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all IRONMAKERS, IRON MONGERS, FACTORS AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

PATENT.

BUILDERS will find this the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour. Can be had only at WEBB & GREEN WAY, Steelhouse-lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener, Gothic Pattern Casement, and other Window Fastenings, Double-action Floor Door-springs, Cupboard Turns, Barrel-bolts, Piston and other Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 2, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing these three separate kinds of work by one machine, and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

HART AND SON,

MANUFACTURERS,

53, 54, & 55, WYCH-STREET, and 91, DRURY-LANE.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, Brass and Iron; Tin, Composition, Iron, and Brass Cocks, Stopcocks, Rings and Lacquered Case Tube for Picture Rods, Desk Rods, &c. &c.

Superior Bird Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERILD'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

WIRE STRAND FENCING

is furnished with all its fittings, by H. S. NEWALL and Co., having obtained the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm enclosures, or subdivisions, for temporary agricultural enclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy as to first cost, and durability, not to be found in combustible or in any other fence hitherto introduced. This fence, as fitted by H. S. Newall and Co. after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the same great property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
190, Strand, London.
6, Hyde-park-street, Glasgow.
27, Dale street, Manchester.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

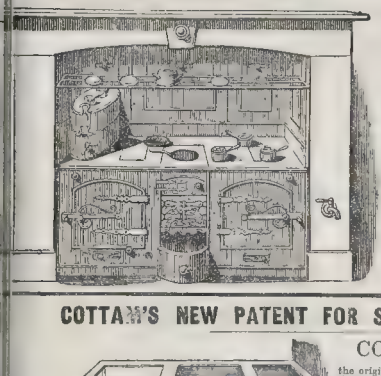
HE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMP

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.



It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

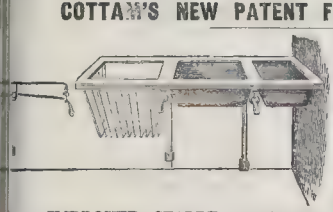
CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.



They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS, 19, Wigmore-street, London; and at the Crystal Palace, Sydenham.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

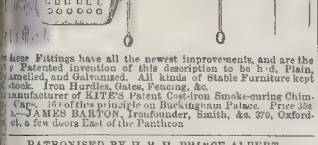
COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER TROUGH, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention, secured by patent, which includes an entirely new method of attaching the halter, bull, and rein, giving to the horse greater freedom, and being noiseless in their operation, and materially adding to its comfort whilst feeding and convenience when at rest. The

ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and innocuous to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

IMPROVED STABLE GUTTERING, WITH MOVABLE COVERS;



DOUBLE-CORNER MANGERS, HARNESS-ROOM APPENDAGES, AND EVERY ARTICLE IN STABLE FURNITURE KEPT ON SHOW.

STALL fitted up, complete, EXHIBITED at the CRYSTAL PALACE, SYDENHAM, Stand No. 19, Agricultural Department; AND AT THEIR

WORKS, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

Descriptive Catalogues and Estimates on application.

ARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of this description to be had, Plain, Enamelled, and Galvanized. All kinds of Stable Furniture kept in stock. Iron Hurdles, Gates, Fencing, &c.

Manufacturer of KITES Patent Coal-iron Smoke-curing Chimney Caps. 160 of this principle on Buckingham Palace. Price 35s each.—JAMES BARTON, Ironfounder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

PATRONISED BY H. R. H. PRINCE ALBERT.

J. & HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled

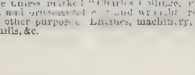
Castings Warehouse, 81, Upper Thames-street.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PFEIL and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The Prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

THE PATENT NAIL and SPIKE COMPANY invite the attention of Ship and Barge Builders, Colliery Owners, Railway Contractors, Shippers, and Consumers generally to their PATENT MACHINE-FORGED IRON NAILS and SPIKES, which possess properties fully equal to hand-made anvil nails, and far surpass those of any machine-made nail yet offered to the public. They are made of the best Staffordshire iron, complete at one operation while red-hot; they are full under the head, and being brought with a proper taper to a chisel point, they can be driven without boring. They will clinch, and the heads cannot be twisted off.



Lists of prices, with patterns, &c. may be had on application at the works, No. 9, Summer-street, Southwark bridge-road.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES, a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH, Nail Manufacturer and General Factor, Rewell-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat
COPY OF MESSRS. RYLANDS' AND SONS' TESTIMONIAL.
"21, High-street, Manchester, March 6th, 1854.
"Messrs. Chubb and Son,
"GENTLEMEN, We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the doors all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.
"You are at liberty to make what use of this communication you may think proper.
"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS."
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 57, St. Paul's Churchyard, London: 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possess in great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi

TO ARCHITECTS AND BUILDERS.
THE Inventor and Patentee of the SELF-ACTING SPRING SLIDES, as a Weather-guard for Doors, Windows, and Railway Carriages, is now prepared to GRANT LICENSES for the use of the same within the United Kingdom. This invention is so simple and inexpensive, at the same time so effectual in excluding all draught, wet, or dust, that it must be universally adopted.—Applications for licenses to be made to the Patentee, CHARLES BLAKE, St. Leonard's-on-Sea.

ITALIAN and GALWAY MARBLE QUARRIES, Depôt, Whitehall-wharf, Parliament-street.—Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, &c that he has just landed on the St. Katherine's Docks, ex *Roberto* and *Betty*, from Leghorn, 50 blocks of MARBLE, consisting of large open statuary, suitable for sculpture, Sicilian, vein statuary ground), dove, Bardilla, &c. Also, at his depôt may be found 100 blocks of marble, consisting of open statuary, vein, Sicilian, black and gold, Galway black, and St. Ann's, and 23 different coloured marbles. A large stock of sawn slabs of every description of marble.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom in selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Cresswell-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account.
Mr. Thompson being no longer his agent.
Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N B The well-known qualities of Mr. Fabbricotti's marble are celebrated through out all Italy, England, and America.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.
Just arrived, per *Roberto Ythan, Betty, Natalie*, and *Harberdina*, 170 Blocks of Marble, and 12,000 feet of Sawn Slab, Mortars, Vases, &c. Yorkstone and Portland Stone, Timber Deals, Floors, &c for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint anders, Oil and Colourmen, and Shipchandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks nolesale under Brandi), either in the dry state or ground in Oil.
Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and oxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and ce its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and y be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more able, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

ESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HE VIEILLE MONTAGNE ZINC
MINING COMPANY'S PURE PATENT WHITE ZINC INT is unequalled for permanency of colour, hardness, and fluency of surface; it is unaffected by sulphurous or any other clours or emanations. Being completely innocuous and free from pernicious effects of white lead, it may be employed in all rtments whilst in use without any inconvenience to the inates.
The greatest caution is recommended to avoid any spurious mpounds that might be sold at cheap rates as Pure Oxide of c. If any adulteration has taken place in the oxide, either in sequence of impurity in the material primarily made use of to oduce it, an imperfect mode of production, or by mixing with oxide certain substances calculated to give it increased weight. hen produces a very inferior article of a very superior paint, t the economy realised by the purchasers of such oxides comes a very expensive result to the owner of the premises ected with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground il, are sold with the VM mark In Hull, by Messrs. BLUNELL, SPENCE, and CO.; from ground and dry, by Messrs. B. MORLEY and CO., and by the Company's Grinding Agents. London, Messrs CHARLES DEVAUX and CO Wholesale ents, 62, King William-street, City; JACK and BRABY, olesale and Retail Agents, 8, Totteuham-court, New-road, and Upper Thames-street, City. In Manchester and Liverpool, by ssrs. LAWFORD and CO. of 45, Norfolk-street, Liverpool, who also acknowledged Painters to the Company for Zinc Paints. ll undertake painting ships, warehouses, dwelling-houses, &c. Leith, by Messrs. R. ANDERSON and CO, Timber-Merchants. Dry CIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, be had of the Company's Agents in Birmingham, Newcastle, rdew, Bristol, Falmouth, Portsmouth, Norwich, Ipswich, ole, and the Isles of Jersey, Guernsey, Man, and Wight; also Dublin, Cork, and Belfast.
he Company also employ an acknowledged painter in London, o will undertake any description of painting with Zinc Paint contract.
For further particulars, apply to the Company's General Agent London, Mr. SCHMOLL, 19, Manchester-buildings, Westminster.

HE VIEILLE MONTAGNE ZINC
MINING COMPANY beg to inform the public that they ve appointed Messrs. T. and S. KNIGHT, of Great Suffolkeet, Southwark, as their painters, who will be ready to execute y description of painting and decorating with the Pure Patent hite Zinc Paint.

UBBUCK'S PATENT WHITE ZINC
PAINT. The PERMANENT WHITE of the Ancients, riously combined by its cost to the use of Lead, is now, by ubbuck's Patent, reduced to the price of White Lead.
The principal characteristics of HUBBUCK'S ZINC PAINT re—Economy, Health, Beauty, and Durability.
Builders and Contractors find Hubbuck's Paint the only one apted to all their purposes; possessing the great desideratum of economy, combined with its being excellent for inside or outside ork, Contractors effect a saving of 25 per cent. by using UBBUCK'S ZINC PAINT.
HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures obtaining frequently pernicious ingredients, are baneful to health d worthless in use, whilst the inferiority of these imitators in e production of pigments is evidenced, not alone by the coarse pearance, but also by the deficiency of that body in their oduce, which is known to the purchaser by the all-settling. This imposition be not practised, therefore, notice that the cask is arked with the name of the original manufacturer, thus—
HUBBUCK —PATENT.
If not so marked, the reason may be inferred.
Every information in the circular to be had of THOMAS UBBUCK and SON, Paint and Varnish Manufacturers, Upper east Smithfield (opposite the London Docks), London.

KEENE'S and PARIAN CEMENTS and
FRENCH PLASTER for internal uses. These well known and stuccoes dry quickly, and can be painted upon within a few ys. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be
painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Roman arian (under patent), and all other Cements in use for buildin purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and
esteemed in London, for plastering surp ses, is a quick tting Cement, that requires no colouring. Sold exclusively by OHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORT-
LAND CEMENT combines the valuable qualities of the atural Cements with the additional advantage that it greatly xcels them in its cementitious properties, that it is not affected y frost, and does not vegetate in damp situations. Account of OMPARATIVE EXPERIMENTS on the remarkable use of ther Cements (read at the Institute of Civil Engineers), to be btained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one uality only of Portland Cement.

PORTLAND CEMENT.—ASPDIN'S
PATENT.
Messrs. ASPDIN, ORD, and Co. have much pleasure in informng consumers of this valuable Cement, that they have, by means f a recent discovery (patented by Mr. ASPDIN, much improved ne quality of this Cement without any increase in price.
Engineers and architects are recommended to specify "Aspdin's atent," as there are numerous imitations sold as Portland Cement resembling it only in colour.
ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements old as Portland, and is considerably cheaper.
A report of experiments made to prove the extraordinary trength of their Patent Portland Cement, may be had at their ffice, New Wharf, Abingdon-street, Westminster, and the Works, ateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, lackfriars, Kings'and Basin, and Lonehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS,
NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—
CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vecetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by H. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—
FULLWOOD THOMPSON and CO. have commenced manufacturing Portland, Roman, and Bath Cement, at their Works, situate near Bridgewater, on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.
These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a perfect, and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method
FULLWOOD THOMPSON and Co. will be happy to forward prices by post on application, and can offer favourable terms to large purchaser and exporters.
St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES
WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

GEO. & THOS. EARLE, CEMENT MANU-
FACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Panels, Stucco, &c. Marble Merchants and Importers of Portolano.

BLUE LIAS LIME.—NELSON and CO.
by most respectfully to call the attention of Engineers, Architects, Builders, and Builders generally connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great permanency of its cementitious qualities, render it invaluable for building in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it for all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The
superior manner in which the above is ground renders it cheaper for concrete or stuc o than any other lime or cement. The sheet lime for coating is burnt on an improved principle, having scarcely any core The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.
SECONDS, PAVIORS', STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC
LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, Holywell, for conveyance by the Chester and Holyhead Railway.—Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Hol, well.

TERRA-COTTA.—Statues, Statuettes,
Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No 1, Praed-treet, Paddington Basin, where prices and designs may be obtained. Examples of Terra-cotta, by J M Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and Portland cement combined The execution of these works by J M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

O. M'CARTHY, CARMAN, and SAND and
CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

DAMP WALLS.—STENT'S COMPOSI-
TION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its applicat on. Eight hundred walls have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s 6d. Prepared only by W. J. STENT, Warminster London Agents—Messrs. Lund & WILLIS, 54, Longacre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

BRICKS.—Yellow Malm Cutters, Seconds,
Paviors, and Pickings of a very superior quality and colour. Address. Mr. WM. WEBB, Brick-fields, Stoke Newington.

WHITE SUFFOLK and RED FACING
BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE (succe sors to Mr. Benjamin Gough), 37, Newington-Crescent, Newing on-butts.

BRICKS.—Malm Cutters, Yellow of Malm
Seconds, Paviors, and Pickings, of good and constantly on sale at H. DODD'S Brick fields, white Italy of quarter of an hour's walk from the City. H. D. earnestly purchasers to favour him with a visit, in order to inspect ts: in and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also Intro-These bricks are sound, well burnt, and unusually free defects; a very large proportion of the stock being suitabl to external facing
Apply to HENRY DODD and CO. at the Countins-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand. C

GREAT REDUCTION.—Pantiles 60s. per
thousand; plain 35s.; Cowley Stocks 35s. at WARD'S, OLD ESTABLISHED HONDURAS WHARF, BANKSIDE, London—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 55s. per 1,000; Floor Bricks and 6-inch Pavings, at 60s. per 1,000; 8-inch Pavings, at 60s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

MAW'S ENCAUSTIC TILE PAVE-
MENTS—A highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance halls, passages, verandahs, conservatories, &c.
DRAWand CO Manufacturers of THE "SUCCESSFUL IMITATION OF OPUS ALEXANDRINUM
in the beautiful ENCAUSTIC TILE PAVEMENT of BYZANTINE COURT, Crystal Palace (M. D. Wyatt, esq in "Official Handbook"), send, free of expense, their pattern and price book.
Benthall Works, Broseley, Salop.

WOODBRIDGE WHITE BRICK
MANUFACTORY.—THREE HUNDRED THOUSAND SUFFOLK WHITE FACING-BRICKS, of very superior quality, FOR SALE. Apply to THOMAS PEAKE, Woodbridge.

BRICKMAKING EXTRAORDINARY!
by OATES and INGRAM'S PATENT MACHINE.—To CAPITALISTS and BRICKMAKERS. Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen by order only, in daily operation, at the Works of the Vauxhall Wheel Brick Company, near Birmingham. The great advantages possessed by this machine over all others are—NO TEMPERING IS REQUIRED The bricks are produced at the rate of 25 per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be hacked up in ranks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.—Applications either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, C. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

CRYSTAL PALACE GENERAL
ARRANGEMENTS The Palace is opened on Mondays at 9 a.m. and on Tues lays, We lnesdays, Thur-days, and Fridays, at 10 a.m. On these days the charge for admission is 1s the Shilling It is opened on Saturdays at noon, on which day the charge for admission is a Five Shillings.

Special first-class return tickets from London-bridge to the Crystal Palace Station and back, will be issued on shilling days to holders of Crystal Palace season tickets, at a reduced charge of 1s. 6d each. These tickets can only be issued upon production of a season ticket to the Crystal Palace.
Every endeavour will be made to afford at all times a sufficient number of first-class seats; but in order to obviate disappointment, it is necessary to announce that, in cases of a great concourse of persons, no particular class of carriage can be guaranteed.
No change can be given either at the London bridge, or at the Crystal Palace Stations; passengers must therefore provide themselves with the necessary si ver.
Children under twelve years of age will be charged only half the above rates.
Season tickets, including conveyance by railway, £7 7s. each; without conveyance by railway, £5 5s. the usual discount allowed to families), may be obtained at the London-bridge Terminus.—By order,
August, 1854.

GUTTA PERCHA TUBING.—Many in
quiries having been made as to the durability of this tubing the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford's Estate, dated Russell-square, Jan. 19, 1854:
"In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will now have stood through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker."
Price lists, illustrated Circulars, containing instruction, to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps The Gutta Percha Company, Patentees, 18, Wharf-road, City road, London.

GLASS PAPER and GLUE.—Imported
by CABINET MAKERS.—F. J. DAY'S celebrated large Glass Paper, 14s. per ream; Cook's finest Scotch Glue, 3d. or 4d. ton, 60s. per cwt.; finest Imperial Glue, 8½d. per ton, 68s. per best London Glue 48s. per ton, 4½s. per cwt. Russian Isinglass, and Gelatine Glues, in great variety. Wholesale and Export, 2 and 7, New Inn-yard, Curtain-road, Shoreditch, London.
Country orders executed on receipt of a post-office order.

LONDON THOROUGH REDUCTION OF PRICES.—
second Route to the PUBLIC begs respectfully to solicit the attention of
Cheapside and other and others to the greatly reduced prices of
effective. Thames, 12 ft. 3 by 9 ..... from 3s. 0d. each.

Strand

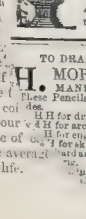
TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT A large assortment of seasoned prepared FLOORING and MATCH BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine, cut Stuff, Skirting, Battens, Panelled Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals and Battens, fashioned on the best machinery, sawn by recent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

REDUCED PRICES.—EDWARD SIMMS late William Cleave, of Wilton-road, Pimlico, Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory, the first of the kind ever established, a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Plank, Scantlings, Sash Mills, Mould ings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory, Wilton-road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSKILING begs to inform parties shipping wood goods to the colonies that he can supply in quality or texture and at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in hand for export.—Southwark Bridge Wharf, Bankside.

TIMBER.—To RAILWAY COMPANIES, CONTRACTORS, BUILDERS, &c. MACALNNON and CO (Nominees) Agents, Montreal, Canada, and Agents in North America for Messrs. Fairbairn and Sons, Manchester, &c. &c. are prepared to make selections and purchases in Canada, of oak elm, pine, birch, red pine, white pine, spruce, tamarack &c either in balk or specified lengths, or cut to any scantling, such as suitable for railway sleepers, railway waggon and carriage manufacture, flooring or roofing purposes, wood paving, &c. &c. thereby saving waste freight and additional cost of cutting up in England. MACKINNON and CO are also prepared to state prices (in sterling money) of above, delivered free on board, at Montreal or Quebec.
Montreal, 17th July, 1854.
References—Messrs. W Fairbairn and Sons, Manchester; Messrs. Laycock, Clark, and Co. Liverpool.

MOULDINGS by MACHINERY at REDUCED PRICES.—ARCHBUTT and ATKINSON beg to inform their customers that the 2½ per cent. advance heretofore charged on the prices in their list is now removed. Seasoned timber at extremely low prices.—St. Pancras Saw Mills, Cambridge-street, Old St. Pancras road.



TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvedere-road, Lambeth. The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 2½ per cent on their mouldings as advertised on the 8th of November last is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.
1st January, 1854.

STAINING WOOD to IMITATE OAK, for Churches, Chapels, School-rooms, Staircases, &c. Brings out the grain of the wood in a beautiful manner, and when used with the proper varnish will never chip. Price 2s. per gallon. Prepared Varnish, 10s to 12s. per gallon.—WILSHERE and Co. 2, Tavistock-court, Grace church-street, London. Agent, 14, St. Paul's-court, Edinburgh.

TO PANEL WOOD MERCHANTS.
VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced in rotation by the ordinary method. For specimens of work and particulars of price, apply to J. CHACK, Sole Patentee. Veneer Cutting Works, 41, Robert-street, adjoining the King's-road Saw Mills, Chelsea.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road. RICHARD MAY has now on Sale Goods imported this year from the American and Baltic Ports. He asks special attention to the following:—
2,000 Pieces of Timber
3,000 Planks, Deals and Battens.
30,000 Prepared Floor Boards of all lengths and sizes.
The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.
All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.
N.B. The extensive Saw-mills are now in operation.

PATENT SOLID SWISS PARQUETERIE.
This beautiful unique, economical, and elegant description of Flooring, so extensively used in Paris and other Continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and Co. 80 New Bond-street.

WOOD and STONE CARVING WORKS, CAMBRIDGE.—TO BE SOLD, cheap, on account of its inconvenient height for the show-room, a NEW CAEN STONE FONT, and CARVED OAK COVER, complete, executed in the best manner, being intended for exhibition. It is copied from the ancient one at Castle Acre Church, Norfolk, and would form an imposing object in a good position.
For price, and Engraving to a large scale, apply to Mr. RATTEE,
Manufacturer of Church Fittings, Organ Cases, Antique Furniture, &c. and Contractor for the general Restoration of Churches.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.
These Pencils are prepared in various degrees of hardness and softness, viz.:

H H for drawing on wood.	F F light and shading.
H H for architectural use.	F for general use.
H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
B for cream.	B B B B ditto ditto.

Sold by the principal Stationers in town or country.

On the 1st of November will be published, price 2s. 6d.

PUNCH'S POCKET-BOOK FOR 1855.

With a Coloured Frontispiece on Steel, by JOHN LEECH, "A Prize Baby Show—Mater Familiæ rewarding a Successful Candidate" and numerous Wood Engravings, by JOHN LEECH, and JOHN TENNIEL.

PUNCH OFFICE, 85, FLEET-STREET.

CAUTION.—Whereas, certain parties are endeavouring to deceive the public with worthless imitations of CHAPPIUS'S PATENT PARABOLIC REFLECTORS, I represent the Principles as from the manufactory, 10, St. Mary-Axe, in every case of such misrepresentation, infringers will be dealt with according to law.

FOR the SICK and WOUNDED.—The proprietors of this work's business in London, and at his country offices, have been directed to forward the above fund by the manufacturer of CHAPPIUS'S PATENT REFLECTORS, 10, St. Mary-axe.

PAPIER MACHE ENRICHMENTS.—WHITE and PARLBY respectfully solicit the attention of Architects, Builders, and Decorators, to their PAPIER MACHE ENRICHMENTS, for inside and external Decorations. They will be happy to supply Pattern Boards of their Mouldings, Ceiling Flowers, &c. on show free of expense; also, if required, to supply Drawings of Architects' Designs modelled free of extra charge. Papier Mâché, Composition, and Carton Pierre Works, 4, Rathbone-place, London.

ARCHITECTURAL and MECHANICAL DRAWING.—EVENING INSTRUCTION given in the practical principles of plans, elevations, and sections, architecture generally; perspective, shading, colouring, &c.; also in mechanical drawing. Terms moderate.—Apply by letter, ALPHA, 6, Middlesex place, New road.

TO ARCHITECTS AND OTHERS.
PERSPECTIVE VIEWS prepared in Outline, or Coloured and Embellished with Landscape; also, Drawings for Gothic and Roman Works, and Details, Specifications, &c.—Address, X. Y. Z. Office of "The Builder."

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLOURIST OFFERS his SERVICES in the preparation of perspective views, the tinting of backgrounds, and the introduction of landscape; also in designing, drawing and lithography. Terms very moderate.—Specimens of ability can be seen by addressing A. Z. 61, Denbigh-street, Belgravia.

THE ARCHITECTURAL and CIVIL ENGINEERING CLASSES, 24, Guilford-street, Russell-square, are OPEN for the reception of PUPILS, at one Guinea per Quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c. and in truction in Architectural and Civil engineering, drawing and delivering, working drawings, specifications, taking out quantities, estimating, &c. &c. For prospectuses, apply to Messrs. HYDE SMITH and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough street.

ARCHITECTURAL OUTLINES, coloured and embellished with landscape (for competition or exhibition), by GEORGE CHILDS, 12, Amwell-street, Pentonville.

TO THE CLERGY, ARCHITECTS, and CHURCHWARDENS.—GILBERT J FRENCH, BOLTON, Lancashire, having declined accounting Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c. respires immediately to all inquiries addressed to him at Bolton, from which place only orders are executed. He respectfully invites direct communications, as by that the most economical and satisfactory arrangement. Parcels free at the principal Railway Stations.

THE LONDON SCHOOL of PHOTOGRAPHY, 43, Newgate-street.—At this Institution the art of taking portraits and landscapes may be learned, and the necessary apparatus purchased for 3l. No charge is made for instructions.

PARTNERSHIP WANTED.—An Architect of experience in town and country practice, wishes to PURCHASE a PARTNERSHIP in a business either in London or the south of England.—Address, A. B. care of J. Pearson, esq. 15, Old Jewry-chambers, City.

PARTNERSHIP (Sleeping or Active).—The Advertisers, who have for many years taken the principal part in the management of an extensive business in the metropolis for private reasons wish to retire, are desirous of meeting with a gentleman with from 500l to 800l to join them in carrying it on. This would more particularly suit a gentleman educated as a surveyor, civil engineer, or builder, or one having a relative who might be educated to the business, and take an active part hereafter. Address (principals only), by letter, pre paid, with real name, to L. P. Messrs. Treggon and Co Jewin-street, Cripplegate.

PARTNERSHIP WANTED.—An Architect and Surveyor, who has been in practice about twenty years in a rising town in the south of England, is desirous of taking into the business an active PARTNER.—Address, A. B. of Messrs. Job. Brothers, and Co. Wellington-chambers, Cannon-street West, London.

THE ALBERT ASSURANCE COMPANY, Established in 1838.
MORTGAGE and other LOANS in connexion with life assurance are granted by this office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.
W. S. VARDY, Manager.

PLATE-GLASS INSURANCE.—The Directors of the ATHENÆUM FIRE OFFICE are now prepared to issue policies for the insurance of Plate Glass against damage by breakage.
The necessity for insuring this kind of property is generally admitted, and in addition to the advantages arising from the large capital and prompt mode of settlement always adopted by the Athenæum, the scale of premium is so moderate as to present no obstacle to a universal adoption of their policies.
Applications for agencies, accompanied by references, to be made to the Manager, 36, Sackville-street, Piccadilly, London.
HENRY SALTER Manager.

NOTICE.—DIVISION OF PROFITS.—All Persons assuring their Lives on the Participating Scale in the PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE OFFICE, before the end of the present year, will be ENTITLED to SHARE in the next Quinquennial Division of Profits to December 31, 1857.
Bonuses paid in Cash, or added to the Policy, or applied to Reduce the Annual Premium, at the option of the Assurer. The great and continuous increase of business, and the extremely favourable rate of mortality among their assurers, fully justify the Board in confidently anticipating a still further improvement upon the liberal amounts formerly declared by way of bonus.
For Prospectuses, showing the peculiar advantages of the Association, and for all further information, apply to the local agents, or at the Chief Office, 15, Moorgate-street, London.
October 21, 1854. WM. THOS. LINFORD, Secretary.

QUANTITIES, Measurements, Dilapidations, Surveys, Building Accounts, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and undeviating attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 62, St. Martin's-lane and Acton-hill.

THE PERMANENT WAY COMPANION. Second Edition, just published, price 2s. 6d. Post free, 2s. 8d. A Practical Treatise

The Builder.

SATURDAY, OCTOBER 28, 1854.

IN our last article, treating of the growth of Italian architecture, as suggested in the Courts of the Crystal Palace at Sydenham (p. 530), we brought down our ew to the time of Michelangelo, and hinted at e pernicious effect which his example in some spects had. The very evil into which we fall this day,—copying what—integral parts with e virtues of the master—become the vices of e copyist—was the dangerous road taken by ne of the successors of this great man, as of other Italian artist at a later period. There obvious error against plain sense, in deco- ing the cove above a cornice with the repre- ntation of a balustrade, as we recollect seeing the old British Museum, in ceilings conceived the same manner as those referred to in e often-quoted line from Pope, painted by rrio and Laguerre. Strange, however, as may be now—architects, otherwise of high ility, do not appear to have perceived the vantages of the rational course in the union the arts, and the disadvantages which were tailed by the opposite practice. Even Sir ristopher Wren allowed the noble dome of cathedral to be marred by this painter's chitecture. It seems to us that the error of inted imitations of forms, where the reality uld be found, which had become so offensive late years, has never till recently been properly garded. The best argument against the house- inter's practice—an error originating in the me mistake as the artist's—has been stated ewhere—to the effect, that in the proper ercise of art there should be no con- ssion of weakness. This, however, there in the Italian styles,—beginning with the inted panelling upon arch mouldings in e work of Cimabue, mentioned in a former ticle,—in the painted architecture attached to e figure compositions of some of the succeed- g decorative artists, as Bernardino Luini, and en in the imitative mouldings which separate e subjects of the ceiling by Raffaelle, from the mera della Segnatura, in the Vatican, of hich a fine copy, by Mr. A. Stevens, is placed the gallery attached to the Italian Court at denham.

But we are passing away from the sketch of rogress, which is all that we can find space for. ignola was in many respects the best of the odern Italian architects, and that one from hose buildings and published works there is ost to be derived. He was a master of the rt of proportion: he knew the secret of the ubordination of parts, by which vastness can be iven to a whole. With him, doors and win- ows were small: pilasters, wide apart, had the eakness of appearance counteracted by the in- oduction of a panel,—so avoiding the use of oupled shafts. The orders—to which, however, e gave great attention—were used on a small cale, and often at the top of a building; and e was the first to use the modillion cornice, or hat where the modillions extend to the frieze, nd which is found in the upper order of St. aul's Cathedral. His works have a further istinctive character by the avoidance, on the ornice, of all blocking, or balustrade.

In Venice, where the Renaissance style long revailed, we have a remarkable succession of rtists. San Michele, of Verona, used a com- ination of orders and rustics, in a manner hich will no doubt be objected to by critics of he good-blooded species, but which never fails o impress the unprejudiced beholder. Of the manner referred to, something may be seen in London, in the Water-gate at the bottom of Buckingham-street (the authorship of which, by Inigo Jones, was lately disputed in these pages), and in portions of the front of the terrace at Somerset-house. San Michele was also celebrated as a military architect, and whilst he led the way to the modern system of fortification, no gates of modern fortified towns have had the grandeur which he contrived to produce in those of Verona. Sansovino adopted the manner of Peruzzi, as to the superimposed orders and entablature,—as seen in the adaptation of one of the principal works of the former architect, now in progress in Pall-mall. An admirable invention of his, was that of columns to his windows, coupled in the thickness of the wall. The works of Sansovino were also characterised by the great use of sculpture and ornament. About this time we meet with the Venetian window. Arch-headed openings and engaged columns were amongst the most common features in the works of the Venetian school.—Palladio was remarkable for the plans of his buildings, which in the case of his villas, were well designed with a view to the effect of the roofs. Of all architects, we hold him to be least appreciable from drawings, such as are to be found in the illustrations of his works by the younger Scamozzi. It is difficult to characterise the style of one who accepted all valuable materials, and has left so much. It is worthy of remark, as we are reminded in the "Handbook," that he had that power of design which could be independent of the use of ornamented mouldings, of which there is no trace in his three principal works. His chief architectural invention was the combination of major and minor orders, seen to the best effect in the Basilica at Vicenza, and by which the same result was attained as by the peculiar method of Vignola. Let us here remark, by way of illustration of the several assertions on which we have ventured, that in no case is the value of perspective representation so well shown as in that of the building just mentioned. A capital drawing of it may be recollected by those who have had the advantage of hearing the lectures by Professor Cockerell, at the Royal Academy, which have been reported in these pages. In perspective, the roof is no longer the huge mass which it appears in that which, strange to say, is the ordinary mode of representation, even in works not intended exclusively for architects. Every one, however, is liable to be deceived who calculates upon a certain result from roofs, viewing them as drawn in elevation.

The name of Scamozzi, though a celebrated one, is not remarkable for any great contribution to our art. He generally used orders above orders, and he was the first to accomplish the true portico with disengaged entablature, in any large dimensions.

Were we giving a lengthy notice of Italian architects, our account would by no means be complete without some reference to the architects of the palaces of the "superb" city of Genoa.

One Italian architect we should not omit to name. This artist, Sebastian Serlio, the designer of a curious ceiling, copied at Sydenham, was the author of a work on architecture, which was published in France, as well as Holland and England. Living early in the sixteenth century, he and the other Italians who were employed by Francis I. contributed to introduce into France the pure Italian taste, which appears to have existed there coëvally with the Renaissance, and which subsequently modified, and further inoculated with the manner of the later Italians, at length assumed the shape of a distinctive style of domestic architecture. Whilst, previous to the time of [illegible] architecture, influence of Italy upon [illegible] was merely that associated with a love of Italian literature, or arising from the visits to Italy of those who were not practical architects; in France, there continued to be a periodic introduction of whatever Italian art happened to prevail, and which was modified, and used collaterally with the previously existing style. The Renaissance style had been followed, as we have seen, to a late date, and it is, even now, one of the most favoured styles of the country, —or at least, in articles of manufacture. Even the Gothic system was not soon rooted out, and the cathedral at Orleans was commenced so late as 1601. Ultimately, what the force of Palladian example became to the architects of England, the teaching of Vignola was to France, and perhaps with greater advantage to the men of the continent. During the seventeenth century, however, the forms imported, assumed a shape very different from the ordinary Italian Cinque-cento, in the architecture of interiors. Indeed, men of a different stamp to such as we have mentioned, had sprung up in Italy, though men not deficient in invention, and certainly not in industry.

But, of the architecture of the seventeenth and eighteenth centuries we have no means of learning anything at the Crystal Palace; and as the works of that time are not inferior to any in interest, we may perhaps feel it necessary to devote some space to them, in another article.

Let us shortly recapitulate the chief features of the pure Cinque-cento architecture, or the distinctive, though not exclusive, style of the sixteenth century. Whilst the Renaissance, as a *style*, is marked by the comprehensiveness of its materials, the Cinque-cento is characterised by the rejection of cartouches and strap-work, and the use of natural forms, or modifications of details, for which there was precedent in the classical times. Many of the antique ornaments, however, were beautifully varied, and the Roman and Venetian palaces show how little the respect for precedent acted as a restriction upon good and originative architectural design.

Abundance of resources, such as architectural publications afford to modern architects, are after all but a clog upon invention, unless certain mental qualifications are possessed. That which writers on the æsthetics of art are laboriously studying to supply, namely, a guiding rule and principle—definable in words, or merely possessed—the Italian architects found in the works which they admired. Whether their course was the best open to them, we will not discuss; it at all events enabled them to leave works which, without detracting from the merit of some recent efforts, have not been surpassed, either by the exercise of a wider scope of invention, or by the pursuit of a score of different precedents.

The men of the sixteenth century, then, were no slavish copyists or unworthy artists, as we have seen them called by particular writers, who have fastened upon the name of Palladio, as especially open to censure. Without all the veneration for that great man that has been expressed in England—and which in those who, like Jones and Burlington, living in the recollection of his fame, it is easy to understand—Palladio's buildings should always be studied for their features of design and composition, without reference to their interest as the great models upon which the distinctive English style was founded.

We have said little about the Italian Court itself, at the Crystal Palace; and the reason is, that in this series of notices, we [illegible] view of the description than at leading [illegible] admitted, could subject which [illegible] ended within the small area of [illegible] few square feet. Of illustrations of Cinque-cento architecture there is [illegible] and of the later Italian [illegible] nearly nothing.

What there is, however, is not inferior in beauty and interest to any other part of the collection.

The principal Italian Court occupies a space equal to that of the principal Renaissance Court. Attached to it, in similar position to that of the Elizabethan Court, is what is called the "Italian Vestibule," and which is treated somewhat differently from the main portion. In the principal court, at each end, is an arcade decorated with copies from the arabesques of the Vatican. The general architectural design of this court, both internally and externally, has been taken from the upper arcade of the quadrangle of the Farnese Palace—that portion attributed to the design of Michelangelo—and the example has been well selected. The reason for the adoption of coloured marbles *externally* as well as internally, in place of Travertine stone, however, is not well put in the "Handbook"—the buildings of *Northern* Italy named, having a much earlier date. As regards the advantage of similar use, as contrasted with decoration by polychromy, there can be no doubt. At the same time there are difficulties, such as there are in cases where materials are selected rather than designed,—requiring the architect to be accurately alive to the precise force of each colour—which it is very difficult to be, under the changes of locality and material to which an architect is subject.—The frieze with chimeræ, and festoons of leaves and fruit hanging from grotesque heads, is very well executed. There are several fine works of sculpture in front of the court, and busts of celebrated artists; and in the niches, are some good copies of candelabra and other works in bronze. The chief interest of the collection is in relation to the arts of painting and sculpture. There are casts of the principal works of Michelangelo. The group of Jonah and the Whale, now proved to have been carved by Raffaelle; the Pietà, by Bernini—a fine work, not marked by his usual peculiarities; panels from the bronze door of the Loggia, beneath the campanile of St. Mark's, at Venice, and the bronze door from the choir of St. Mark's, by Sansovino; works by Fiammingo, Baccio Bandinelli, and others. In the middle of the court, and not yet supplied with water, is a copy of a portion of the Fontana delle Tartarughe, from the Piazza Mattei, at Rome. Why it should be exhibited without the bronze figures by Taddeo Landini, casts of which are in the nave, is not apparent, since without them it gives the appearance of but questionable taste in Giacomo della Porta, its designer. We beg to protest against this unnecessary handling of the works of artists of ability, as rather too much in the way of proceeding of modern manufacturers, and as setting a bad example to the latter.

At each end of the court is one of the two monuments from the Medici Chapel, lately referred to. Amongst the principal objects in the gallery, are the bases of the Venetian standards (these also are strangely divided) and the figure of St. Jerome, by Torrigiano. The central space of the gallery has the ceiling by Serlio, which is one of the most curious works in the collection. The original, at the Biblioteca Antica, at Venice, is supposed to have been executed about the year 1540. It is painted in grey colours, with gilding here and there, and with considerable display of ornamental accessories, and, though quite opposed to modern ideas, is by no means ineffective. Serlio is called in one part of the "Handbook" a pupil of Bramante, and in another of Peruzzi. As Bramante died in 1514, it is not likely that the former statement can be correct. Indeed, we may remark that there are several discordant statements about celebrated men in the notices, interesting as these have been made generally. Bernini is in one place said to have been born in 1598—in another, in 1589. The latter date is the correct one. We should also say that the arrangement of the "Handbook" is open to improvement,—statements relating to the same question being the comprehensand down about the book, where served by finding all in the reader would be best compartment of the gallery is covered. Another of the ceiling by Raffaelle before referred to. The authors of the "Handbook" consider the original over the [illegible] arrangement of painting as applied to decorative purposes. The subjects are emblematic of Theology, Poetry, Philosophy, and Law or Jurisprudence. Four circular spaces have allegorical figures on gold grounds, and oblong spaces are filled with subjects in allusion to the principal figures.

There are so many interesting questions connected with everything we touch upon, that we hardly dare attempt to extend this long description by further notice of the arabesques of Raffaelle. We have remarked that they are not specimens of the pure Cinque-cento, and probably the fact that they are not so, has to do with some of their defects. As a style of decoration, however, they are worthy of particular attention. Few works would be found to display an equal amount of invention in details, combined with a due subordination to general effect,—the great difficulty in interior decoration. They are, nevertheless, full of inconsistencies and improbabilities, and are in some respects very inferior to other productions of Giulio Romano, and others who worked upon them. The scholar profited from the master; but, the credit of all is mainly due to Raffaelle. The present copies, though, as it appears to us, faulty in drawing in some places, give probably the best idea of the originals that has yet been afforded; and it must be recollected, that the works at Rome are rapidly perishing. Those who are now decorating buildings in a similar style, should devote more attention to the landscapes and other subjects in compartments, than is generally given. We could name cases, where the intention—to interest and instruct—is defeated by the dirty daubs which have been introduced. The treatment of such subjects is under peculiar restrictions; the general effect of the decorations has to be first considered; but the details should bear close examination; in short, these should be produced by artists. A good *sketch* might often suffice. We have reason to know, that such spaces could be filled by competent hands, at a cost far too little in excess of that of the present sort of work for any importance to be attached to that consideration; and what is worth doing, should be done well, or not at all.

The Italian vestibule is an arrangement of arches, springing from the capitals of Corinthian columns, surmounted by an entablature and low attic. The whole is painted with a view to illustrate the painted imitation of relief and structural architecture, combined with figure compositions, which we have held was too common in the Italian style. We fear, therefore, we could not contend that such painting was not used—even in the case of exteriors; but again, it is worthy of remark, that the example at the Casa Taverna at Milan, of one story of which the present work is a copy, was, strictly speaking, to be viewed as in the condition of an interior. The works of Bernardino Luini, however, exhibit too many instances of such objectionable features as the painted triglyphs which we see here, for us to support the Italian practice. One objection is not as regards the chances of decay—for, the examples at Hampton Court show the possibility of preservation even in our own climate; but has reference to the question, whether our modern practice of confining coloured decoration chiefly to the interiors of buildings, is not founded on some obscure sense of æsthetic propriety. Luini's works, it is remarkable, date early in the sixteenth century, and not later, when the influence of painting upon architecture became general.

As the early Renaissance period was especially remarkable for the importance of sculpture as an art, the Cinque-cento period was conspicuous in regard to painting, and the walls of this vestibule are lined with an extraordinary collection of copies by Mr. West, nearly 150 in number, of works of the old masters. Without entering into the question of their merits as copies, we have no doubt that they will be most valuable, as a means of conveying better knowledge of the originals than can be obtained from engravings.

The want of union between painting and one tincture—in some points—at a time when one of the most practised all branches of art, is history of this period[illegible] circumstances in the [illegible] have seen that the work of the painter too often destroyed th work of the architect, or that it originated ba architecture, by the attempt to imitate stru tural forms. The architect was guilty of th same error, and when the walls of a buildin might with more propriety have formed a bac ground to pictures, excessive colour and gildin were resorted to, as in the Jesuit churches, an the greatest dissonance was the result. A these errors we ought to avoid now;— least, they appear to be fully apprehended i modern æsthetics.

The doors leading out of the vestibule int the Great Transept, are copies from those of th Cancellaria Apostolica at Rome, by Bramante and were referred to in a former notice. Th date is 1494.

The altar of the Madonna della Scarpa fro Venice, and several other objects, are range on the exterior of the court next the Tra sept, where the principal work is the Moses, b Michelangelo.

We have thus gone through the series of th courts at the Crystal Palace; and though w might well have devoted even greater length t the history of certain styles, we trust we have n employed our space without contributing some thing to the important ends which may b advanced by this marvellous collection. Othe branches of the general subject of art will re quire our attention, but in concluding ou notices of the courts themselves, we will offe one or two observations. The course which ha been taken in the illustration of styles of arch tecture by the architects at the Crystal Palace has not in all respects met with our approva and this we have not hesitated to state. Bu their task was one of no ordinary difficulty; an it is far easier to say now what are errors tha it was then to avoid them. We have not quote much from the "Handbooks," because we sough to give our readers what their space had no allowed them to contain; but they will be foun generally of great service. Our profession readers and the public should feel that bot for literary and professional labours, the arch tects of the courts, and all their coadjutors, ar deserving of lasting thanks.

IRON GRATING OF THE TWELFTH O THIRTEENTH CENTURY.

At times, mediæval ironwork of the sam pattern is found in places far apart. M. Daly in his excellent *Revue Générale de l'Architecture* gives an instance which we have introduce here, namely, a grating in the church of St Germer, in the *Département de l'Oise*, and similar grating found in the Cathedral of Stras bourg. The forms, he says, are those adopte in the twelfth and thirteenth centuries. Th grating at St. Germer has lost its original ter mination, and has a modern substitute, partly o wood and partly of iron. The construction o this grating is very simple. Each division i composed of the same element several time repeated, and this element is formed of thin bar of iron of the proper section, bound together A small lump of iron is formed by the hamme at the ends of the bars, and this by means of matrix and a blow of the hammer, is made t take the shape of a flower or palm-branch, a required. The rods are then bent into volutes put back to back, with the third piece of iron between them, and secured by solder and th hammer. The piece of iron employed to ti them together in the centre receives also a ornamental shape.

The uprights are formed of two pieces of plate iron, grooved, which clip the volutes, and are held together by iron pins. Each upright terminates in a lance form, and these in like manner clip the ornamental scroll at top Coupled horizontal pieces secure the uprights a their summit and their base, and give to the whole grating the desired firmness.

ON CURVES SUITABLE TO ARCHITECTURE.*

It is impossible to limit by any arbitrary rules the curves which are suitable to architecture. All regular curves might, in different cases, be used with advantage; but as the number of possible curves is infinite, it should be the business of those who approach this subject to consider, on the one hand, what curve is most suitable for a required purpose, and on the other hand, what is most easy of application, either by geometrical construction, or, what is better, by mechanical description, the first being the most important, but the second a very important consideration; so important, practically, that we have been in the habit too exclusively of using the circle where other curves would have been more appropriate. We should, therefore, seek to use, as much as possible, curves which are easily described; but not from being sparing of thought or invention; but by so adapting our designs, and selecting the curves used, that they may both be most fitting, and most easily applied.

As a general rule, the circle should only be used where uniform curvature is sought for: in designs requiring varied or contrasted curvature it should be avoided. In the case of the former, *i.e.* in varied curvature, it should never be used, as, for instance, it has been in the late Gothic four-centred arch. In the case of contrasted curvature, as in the common ogee, produced by segments of circles, it should be limited to cases where great contrast is desired, as in Gothic ogee arches, &c. in which cases, although the contrasting arcs of circles form, as it were, a discord, they may yet be very effective. But in all cases where harmony is desired, the ogee, *i.e.* Hogarth's line of beauty, should be a regular mathematical curve, passing through a real point of contrary flexure, where, between the contrasting curvatures, there lies a point of absolute straightness,—a straightness taken advantage of by Watt, in the case of the curve called the "Lemniscata," to produce the parallel motion of the steam-engine.

The chief characteristics of curves are—1, Points of greatest curvature; 2, Of least ditto; 3, Points of contrary flexure; 4, Loops, nodes, and cusps; to which may be added, a symptotes, or straight lines towards which the curve always approaches, but never reaches. All these varieties are exceedingly well illustrated in the curve called the conchoid of Nicomedes.

It is very desirable in designing any object which introduces curved lines, that the above characteristics should be thought of, especially the greatest and least curvatures, and points of contrary flexure.

In designing a vase, for instance, we might wish to be able to select such a curve, that the lower portion of the profile should be convex, the curvature being least at the bottom; a point of quickest curvature about the middle, succeeded by one of contrary flexure leading to the concave outline forming the neck, the latter having a point of greatest curvature at the lip. All this might be tolerably well designed by hand; but it would assist the artist to have before him a mathematical curve embodying the desired conditions, which might serve as a guide, or model, even if it would not itself suit the purpose exactly. Moreover, a careful study of several specimens of mathematical curves would greatly improve the hand in drawing and designing. But in all important cases, where a true curve can be applied, it would be desirable to do so, as the Greeks used a segment of the hyperbola for the echinus of the capitals of their Doric columns.

It is certain that the proper use of such curves has a great deal to do with expression in architecture, although we must not think that this alone can make the architect.

I will now proceed with a short sketch of the different styles of architecture which have succeeded one another, endeavouring to show their several capacities for the introduction of mathematical curves, before commencing the description of the curves of which the use is chiefly recommended. I must, however, first refer you to the enduring architecture of nature, which never grows out of date; in which the

* This pape was read at the Architectural Museum on the 2nd of October.

occurrence of regular and varied curves is endless. I believe that in the forms of shells, and in every kind of leaf, whether the delicate curvature of the bending bulrush, or the heart-shape leaf of the violet or cyclamen, or in other countless varieties of form,—in every case, there is a normal geometrical figure, which might perhaps be discovered by a sufficient examination, as in the case of the pendant bulrush we at once recognize the elastic curve, and in the nautilus, ammonite, and other shells, we find the equiangular spiral. It has often struck me that it would be an occupation worthy of a philosopher to investigate these forms by collating a sufficient number of examples.

But we will proceed to the less consistent architecture of man, and let it be our ambition humbly to follow the one, and not to allow any supposed superiority in any style or people hinder us from striving to surpass the other.

Omitting the Egyptian and Assyrian architecture, in which, as far as I know, there is no great refinement in the selection of curves, we first come to the Greek, in which architecture the fortunate circumstance of a simple idea having been elaborated into perfection during a long series of years, led to the use of a great number of beautiful geometrical curves. The hyperbola and parabola appear in the contours of the mouldings: the former curve also forms the entasis of the columns.

The Greek vases also give indications of the use of the conchoid of Nicomedes, and other curves. In all these there is the most complete union of science and art.

The Romans, who formed their architecture on the Greek model, seemed to have thrown aside the noble and reserved simplicity, which they had not the taste to appreciate, and strove chiefly to obtain a magnificence bordering on vulgarity. Still, so great a people could not fail to endue whatever they did with an expression of power. We find, in the forms used, nothing but straight lines and segments of circles; and if, from their example, we can draw but litt'e to illustrate the use of varied curves, at least we feel that the want of them is a very serious defect.

Derived from the Roman, arose the Romanesque, from about A.D. 700 to A.D. 1100, also called Byzantine, Saxon, or Norman, according to the locality in which it prevailed. In this architecture, the curves used are chiefly circular-headed arches and circular mouldings, but in the carved ornamentation of the capitals, as well as in the Mosaic decorations of walls and ceilings, free undulating curves were continually made use of; and if circumstances should lead to the general use of this style for ecclesiastical architecture, there would be nothing discordant in a more complete use of varied curves.

This architecture, as it grew in lightness and airiness, gradually prepared itself for the Gothic, and when its aspiration for loftiness was fulfilled by the introduction from the East of the pointed arch, a new epoch in architecture was completed. The pointed arch had existed for centuries in the East, without finding its true place in architecture.

The western architecture had been struggling for loftiness by stilting arches, and other expedients. From their fortunate combination, sprung that style which has done so much honour to the middle ages, so much so, that it seems to be the one object of many of the present highly civilised day, to throw themselves back into those times, and to endeavour to think their thoughts, and even to limit themselves to their mental stature. Let us by all means do honour to the great results they achieved, but let it be with an independent spirit.

But my object is to call your attention to the great development which the use of curves received, or might have received, in this architecture. The intersections of the vaulting especially offered innumerable places for curves of different kinds of curvature. But from want of geometrical skill, these opportunities were generally lost.

The principal ribs and cross springers were, with great propriety, in the earlier architecture, almost always single segments of circles; but the wall ribs, and other places where the peculiar form of the intersection of the vault often gave opportunity for introducing a segment of an ellipse or parabola, with the greatest advantage, is often a bungling, broken-backed affair.

The Gothic builders, however, were not at all insensible of the beauty of freely-drawn, and varied curves, as shown in many of the sections of their mouldings, such as the bell of the Early English capital, and the late Perpendicular hollow, and many others. Indeed, it would have been impossible for the artists who copied the infinite beauties of natural foliage so conscientiously and so well, to have shut their eyes to the exquisite beauties of Nature's laws offered to them in the common grasses by the wayside, in the graceful festoons of the climatis and other creepers hanging from the bushes where they chose so well their models, or the curves of quicker flexure in every leaf they copied.

The Gothic architecture was at its highest development in the style most incorrectly called Decorated, which prevailed from about A.D. 1260 to A.D. 1360.

This style has, with more justice, been called Curvilinear, and it was the judicious use of curved lines that gave it much of its character.

A more scientific treatment, without loss of spirit, would of course have been better, and would have led to a more permanent style; but when the various and beautiful combinations of circular arcs had run their round, the fashion changed, and I think, though others may differ, that, in the first instance, an improvement in stateliness was effected by the introduction of Perpendicular architecture; but this soon degenerated; for the life-giving love of nature, in sculpture and foliage, became cold and formal, and the political and religious conditions which were favourable to art had departed.

The artists of Italy had never been satisfied with the form of Gothic which had reached them, and conceived a longing to revive the classical architecture; and from the moment that Alberti and Brunelleschi found how plastic the Roman architecture was in their hands, the Gothic only held its place until the northern nations had been sufficiently educated in the Revival to supplant it. Before it fell, an opportunity was lost for the use of a mathematical curve, in the case of the depressed or Tudor arch, otherwise called the four-centred.

In such a combination, the two arcs of different circles which meet are sure to quarrel with each other, and each carrying the eye with it in the direction of its own complement, never can produce that beauty of gradual change of curvature seen in an elliptic, parabolic, or any other arc of varied curvature. The four-centred arch, and all false ellipses, ought to be at once and for ever excluded from architecture.

I omit the Elizabethan, which was in the strictest sense transitional.

The new style gave rather more facilities for the use of varied curves than the old,—in festoons, which are catenary curves, trusses, the curious volutes in which Michelangelo delighted,—elliptic arches and elliptic intersections in semicircular vaults, which were used with the greatest propriety and vigour by our architects of the time of Charles I. and Charles II.; the greatest names in England, I need scarcely remind you, being those of Jones and Wren.

Soon afterwards, in great measure on the authority of Bernini and Borromini, a less severe style came into vogue, in which all sorts of varied but unregulated curves were employed. The Louis Quatorze style has still its admirers, so that name will suffice to explain what I mean. The want of order and method in this style, as in the case of the later periods of the Gothic curvilinear, led to a change of feeling which soon resulted in the adoption of the Greek; a style, though in itself most perfect, very little suited to our every-day wants, and, without great modifications, unfitted for our climate. The mere copyists of the Greek have failed utterly; while most successful results have been produced by such men as Professor Cockerell and Schinkel, who have embodied in new combinations the character of that architecture; and in their works fine instances of profiles are to be found, drawn, if not by geometry, by intuition. As all, however, have not that gift, and yet are called on to use curved forms, it cannot but be useful to point out those which are most easily brought to bear, and are at once the most fitting and easy of mechanical or geometrical construction.*

F. C. Penrose.

EDWARD WEDLAKE BRAYLEY, F.S.A.

Mr. Editor,—I have watched the progress of your excellent periodical from infancy to its present stage of vigour and soundness of principle and opinion, and have also a goodly range of its volumes, in which I have occasionally written a few articles. I am now induced to send you brief notices of an old associate and friend, whose life, writings, and professional works entitle him to rank amongst the "Worthies of England." With Mr. Brayley I continued in confidential association for more than sixty-five years.

In my boyish days, when I occasionally emerged from the black and dank cellar of the Jerusalem Tavern, London, I eagerly sought to obtain information and amusement at the book-shop of Mr. Essex (noticed in p. 69 of my Auto-biography), and there often met the future historian of Surrey, then apprenticed to an enameller in Red Lion-street, who was employed by Henry Bone (afterwards advanced in the Royal Academy to be one of its members) to prepare and fire enamelled plates, for small fancy pictures, in rings and trinkets. Mr. Brayley at that time, like myself, was an ardent reader and lover of books, and his conversation, with that of Mr. Essex, excited me to devote every spare moment I could procure from my common-place labours to read and meditate on such miscellaneous volumes and pamphlets as could be obtained. Though Mr. Brayley was my junior by more than two years, he had not only read much more extensively, but, from a more retentive memory, had attained a greater variety of information than myself. From this association, and from fortuitous circumstances, which human intellect never yet understood, ultimately sprang up a crop of literary works which cannot fail to astonish the youthful reader who calculates their amount in volumes, pages, variety of subject, extent of labour in research, travel, embellishments, and in writing.

As may be reasonably supposed, they commenced in the most humble and unpropitious departments of literature. Our first *partnership* composition and speculation was a song called "The Powder Tax, or a Puff at the Guinea-pigs," written by my young friend, and sung publicly at a Spouting Club held at Jacob's well, Barbican, where a crowded assemblage of smokers and tipplers met once a week to hear theatrical tyros, and even veterans, recite prologues, act scenes from plays, and sing songs. The new ditty was encored, and called for the following week; for powdered hair with "pig-tails" was popular and fashionable, as partly intimating something of aristocracy, and opposed to the "swinish multitude,"—a phrase which Burke had applied to the lower and democratic orders. We were tempted to print copies of our new ballad to give to friends, and sell, at one penny each. A thousand copies were soon disposed of, and more than seventy thousand were sold by a Mr. Evans, a noted song-printer in Long-lane, Smithfield, whose agents sang and hawked them about the streets for a long time. Thinking our literary property invaded and plundered, we threatened to prosecute the daring pirate, but he defied law and the two young authors. Soon afterwards, Mr. Brayley, at my instigation, wrote "A History of the White Elephant," for Mr. Fairburn, in the Minories, for whom I had been editor of two or three annual Song-books, a series of "Twelfth-night Characters," "The enterprising Adventures of Pizarro," &c. This association led to a more intimate union in a mutual copartnership, as joint editors of the "Beauties of England and Wales"—a work begun with little qualification for its arduous duties by either authors or publishers;

* In the course of the paper, the lecturer alluded to Mr. Jopling, as having done more than any other to advance the subject of mechanically described curves. Amongst the examples explained, and the instruments on the table used to produce them were, an instrument on the principle of the cone, drawing all the conic sections, namely, the ellipse, parabola, and hyperbola; trammels for the ellipse and cardioid; the conchoid of Nicomedes and the cissoid of Diocles; Mr. Jopling's line of beauty; Penrose and Bennett's heliograph, for drawing by continuous motion the equiangular, or logarithmic spiral, suitable for volutes, and other curves of uniformly increasing curvature.

Its origin, progress, and characteristics I have fully explained in my Auto-biography, already referred to. Suffice it to say, Mr. Brayley wrote the greater parts of Volumes I. and II. whilst I travelled over five counties for materials, and directed the embellishments. A history of this once popular publication, which, though at first announced to be comprised "in about six volumes," and finished in the space of three years, extended to no less than twenty-five large volumes, and was in progress of publication more than fifteen years, would involve a curious, also a lamentable story of "the quarrels of authors," and their dissensions with publishers, as well as the caprices and forbearances of the latter. My own personal share of miseries in this drama was often painful, as well as mortifying and embarrassing. At length the authors and publishers separated. The former undertook to write and be responsible for certain counties and volumes of the work. Hence Mr. Brayley engaged to write the accounts of Hertfordshire, Huntingdonshire, and Kent, for Volumes VII. and VIII.; whilst I produced Lancashire, Leicestershire, and Lincolnshire, for the ninth volume. London and Middlesex were next assigned to my late partner; but he finished only one large volume and part of another on London, when he was superseded by Mr. Nightingale, who was employed by the publishers to continue and complete the topography of the metropolis. Though they were, perhaps, fully justified in making this arrangement, they were unfortunate in the selection of a new author, or rather compiler; for it is painful for me to refer to and read some of the pages of his continuation. Whole passages are taken from other books without acknowledgment, whilst errors, misstatements, and carelessness of matter, method, and language, pervade the two and half volumes to which Mr. Nightingale's name is attached.

In the second volume of my Autobiography is a detailed account of "The Beauties," with notices of publishers, authors, compilers, and correspondents; and the topographical reader is further referred to Mr. Brewer's valuable introductory volume to the work.

During the progress of the publication, and after the retirement of the original authors, Mr. Brayley wrote several other works on a variety of subjects, but mostly topographical and archæological. Two of these especially, deserve more particularly the attention and approval of the reader, from the extent and value of their multifarious contents. The first was the "History and Antiquities of the Abbey Church of St. Peter, Westminster," in 2 vols. quarto and folio, with numerous illustrations by J. P. Neale. This is a work of laborious research, of deliberate and careful investigation, discriminating and truthful analysis, and truly sound deduction.

The same praise may also be bestowed on "The History of Surrey," in 5 vols. royal octavo and quarto, written by him between the years of 1841 and 1848, with small aids from his son, Mr. Britton, and Dr. Mantle. It was projected and begun by myself and Mr. John Timbs, and was undertaken at the risk, and produced at the expense of Mr. Robert Best Ede, of Dorking, who expended some thousands of pounds on its execution. It is barely justice to the liberality and enterprise of that spirited and zealous tradesman, to state that whilst it reflects credit on him, it is also honourable to all parties whose names are attached to the work. In its artistic embellishments it surpasses any topographical publication that I am acquainted with.

Another volume, though projected by myself, and the dedication, preface, and several passages written by me, was mainly the production of Mr. Brayley's pen, and evinces the usual extent of his investigation and careful authenticity of narrative. It was produced soon after the lamentable fire of 1834, when most of the ancient parts of St. Stephen's Chapel, and the Palace, with the Houses of Parliament, and attached buildings were burnt, and others so much injured that it was deemed expedient to clear all away and erect a new and improved edifice in their place. "The History of the Ancient Palace of Westminster, with numerous Illustrations," was produced and printed in quarto and octavo, in 1836.

The following publications are of Mr. Brayley's writing: "Delineations of the Isle of Thanet and the Cinque Ports," 2 vols. 18mo. 1817; "Londiniana; or Reminiscences of the British Metropolis," 4 vols. 18mo. 1823; "History and Description of the London Theatres," 4to. 1827; "Popular Pastimes; being a Selection of Picturesque Representations of the Customs and Amusements of Great Britain," 8vo. 1816, with several engravings in aquatinta, from drawings by Stevanof; "Views of Suffolk, Norfolk, and Northamptonshire, illustrative of the Works of R. Bloomfield; with Descriptions and a Memoir of the Author," 8vo. 1806; a similar volume on the works of Cowper; "The Graphic Illustrator," containing a variety of essays, criticisms, biographical and archæological papers, and wood-cut illustrations. Though at one time calculated to be very popular and profitable, it was so irregular in its periodical appearance, that its readers and publisher became impatient and querulous; and after struggling on from its first appearance, July, 1832, to November, 1834, it died a natural death. On the wrapper of the last number the editor replied to a long list of correspondents, thanking and praising some for valuable communications, and promising others due attention to their favours in future pages. The communication of one, or rather a presumed contributor, thus remarks on the work:—

"May
Your illustrious illustrations
And your learned observations,
With your graphic representations,
Antiquarian communications,
Philosophic commentations;
And historic delineations,
With your clear elucidations
Of abstruse speculations,
And your patient examinations
Of all minor considerations,
Cause abundant remuneration
For your supererogation."

He also wrote "Descriptions of Places represented in Middiman's Views and Antiquities of Great Britain," 4to. 1813.

In 1806 appeared a quarto volume, written mostly by Mr. Brayley, with the name of Wm. Herbert annexed, entitled, "Lambeth Palace," illustrated, 4to. The same authors published a volume of miscellaneous poems, in small 8vo. in 1803, with the title of "Sir Reginald, &c." In 1805 Brayley edited a large royal 8vo. volume, under the title of "The Works of the late Edward Dayes," containing an excursion in Derbyshire, essays on painting and painters; also illustrative notes by E. W. B. who devoted much time and literary labour in producing a large and respectable volume, the profits of which were intended to benefit the surviving widow of the artist.

This publication, like some other plans in which my old friend became engaged, involved him in great sacrifice of time and pecuniary liabilities, and tended materially to harass and distress him. Hence, and from want of punctuality in the periodical publication of the monthly numbers of "The Beauties," he became embarrassed in circumstances, which tended to prey on his spirits, and occasionally paralyze him for many successive years. He had been secretary and librarian to the Russell Institution for twenty-eight years, the committee of which entered the following just and honourable record on their minutes a few days after his decease:—

"*Russell Institution, September* 29, 1854. Resolved,—That this committee having heard with great regret the death of E. W. Brayley, Esq. beg to express their sympathy with the members of his family for the loss which they have sustained, and to record their unanimous testimony to the attention and courtesy which the deceased ever manifested to the members of this institution, for the lengthened period of twenty-eight years, during which he held the important offices of secretary and librarian."

Mr. Brayley was constitutionally of healthy and hardy stamina, and was enabled to bear and surmount great bodily as well as mental exertion. I have known him walk fifty miles a day, for three successive days; and write for the press for fourteen and sixteen continuous hours. At that time he suffered much from a troublesome disorder, and twice was in danger from it. Within six weeks of his death he was assailed by diarrhœa, but neglected to seek medical advice, until illness had prostrated his frame. He then applied to Dr. Joseph Williams, who promptly and skilfully attempted to arrest the malady; but it was too late, for his system was too far subdued to be rallied, and he died a victim to his constitutional enemy—procrastination, on the 23rd of September, 1854, in the eighty-second year of his age. His remains were interred in a cemetery adjoining the north side of the Foundling Hospital. He left a son, one of the librarians of the London Institution, and a daughter.

J. BRITTON.

CEMETERY COMPETITIONS.

YOUR advertising columns have lately given publicity to the following glaring attempts to excite the *cupidity* of architects:—

1. The Charlton Burial Board offer 20*l.* for drawings and estimates for the erection of the necessary buildings, and for draining and laying out and planting their 5 acres of ground; with the extraordinary addition of 10*l.* for "detailed working drawings and specification."

2. The Doncaster Cemetery Commissioners, after vainly attempting to seduce an architect into designing them cheap chapels, offer 15*l.* for "Designs, ground plans, elevations, and detailed estimates for the laying out 7½ acres, erecting two chapels, with lodge and entrance-gates, the whole to cost 1,600*l.*" Parties competing to have the *benefit* of a trip to Doncaster to inspect plans and levels.

3. The Burial Board of Bury St. Edmund's will give 10*l.* to the fortunate architect who shall furnish them with suitable "Design, plans, and estimates for laying out 10½ acres, and for chapels, lodge, entrance-gates, fences," &c. Permission is in this case *kindly* given to view the spot.

4. The Tiverton Burial Board actually offer the sum of 6*l.* 6s. for the "accepted" plans, specifications, and estimates, for erecting upon their 4½ acres "two chapels, a sexton's lodge, board-room, and entrance-gates:" the competitors to go to Tiverton to see the plan of land.

It appears to me, sir, that these exhibit a somewhat novel phase in the history of competition. Heretofore (although the premiums have in many cases been wretchedly low) the professed object has been to secure the best design; whereas in the above instances it evidently is the main aim of the parties to obtain the cheapest architect and the cheapest architecture. I think you will agree with me in crying shame on those who entertain so ignoble an idea of architecture as to offer such paltry premiums; and with still increased emphasis, shame on all who by competing on such terms not only degrade themselves, but also bring disgrace upon that noble art of which they are the too unworthy professors. Alas! when will architects be wise and united? When will they see that the cure of competition evils rests mainly with themselves?

J. N.

THE TOMBS IN WESTMINSTER ABBEY.

HAVING been much interested in the perusal of the extracts in your last number from the paper of Mr. J. H. Markland, read at the meeting of the Worcestershire Architectural Society, I am induced to notice the evident inaccuracy of the concluding anecdote—namely, that the tomb of Aylmer de Valence in Westminster Abbey was removed from its original position to make room for Wolfe's monument, and placed where it now stands under the direction of the Rev. Dean. Feeling convinced that this could not be the fact, I at once referred to "Dart's Westminster," published, as you are no doubt aware, before Wolfe's monument, or the occasion for it, were in existence. And as well from Dart's description as from his engraved plan of the Abbey, it is clear that Valence's tomb, as well as the adjoining tombs of Edward Earl of Lancaster and Aveline, his countess, remain in the same position in which no doubt they were all three originally erected—namely, on the north side of the High Altar. It is further evident that it was the screen of the chapel of St. John the Evangelist which was removed to make way for Wolfe's monument, the basement of which screen was formed of two ancient monuments, with brasses, and which were then laid level with the pavement of the ambulatory in front of Wolfe's monument, and where, I believe, they still remain.

There was, however, quite sufficient, in connection with Valence's, and the two other tombs above referred to, to have furnished Mr. Markland with an illustration of the reckless ignorance and want of taste at the period to which he alludes, without any such inaccuracy as he has fallen into, inasmuch as on the occasion of the erection of a modern altar-piece in the reign of Queen Anne, these tombs were totally shut out from the choir, and excluded from view, by a substantial wainscotting of carpenter's Gothic. It was then, perhaps, considered quite sufficient that they might be still seen from their sides next the ambulatory; but as regards the beautiful tomb of the Countess Aveline, this remaining privilege was shortly afterwards extinguished, by the erection in front of it of the monument to Lord Ligonier, in the early part of George III.'s reign. The reproach of the shutting out of the three tombs from the choir was redeemed by the removal of the wainscotting on the erection of the new altar-screen soon after the coronation of George IV. but the usurpation of the Ligonier monument has been permitted to continue, and this has been a main inducement for my now addressing you, in the hope that it may attract the attention of the judicious architect who now has the superintendence of the Abbey, and who is likely to have the distinguished honour of restoring the royal tombs. Within the last few years several very judicious improvements have been made in the way of restoration by the removal or rearrangement of monuments; and nothing would be easier than the removal of that of Lord Ligonier for which I would suggest an inoffensive abiding-place by the side of Mrs. Siddons's statue, behind the great monument of Sir Francis Norris. This removal would completely restore *to view* the tomb of the Countess Aveline, though probably in a sadly mutilated condition, as, indeed, is sufficiently indicated from that portion which is restored to view on the choir side; but then I would observe that this tomb, though eminently beautiful, is small, and simple in its details; and that a comparatively small amount would be required for its effectual restoration, for which there are ample existing authorities, without the necessity for the restorer's exercising his own invention, and thus rendering it questionable.

As the countess was not only the wife of a prince of the blood royal, but herself the heiress of an illustrious house, I should submit that a small slice of the Government grant might be legitimately devoted to this object. M. H.

PROVINCIAL NEWS.

Yarmouth.—The new bridge has at length been opened to the public. The following are a few particulars as to dimensions, materials, and cost:—Foundation, 26 feet below low water-mark; 13 feet 7 inches to top of bed-plate; 7 feet 6 inches to top of pedestal; end spans, each 65 feet; centre spans, 50 feet; piers, 16 feet thick at bottom, 12 feet at top; 50 feet in length, to extremity of cut-water; and 36 feet at square. Roadway, 26 feet wide; footpaths, each 4 feet 4 inches; end parapets, corrugated iron covered with African oak planks. Centre—wrought-iron girders, covered with African oak plank; copper lamps on granite pedestals, 10 feet 6 inches, by 5 feet wide; footway—approach radius of 25 feet. The contract price for the work was 24,500*l.*; but in addition to this there have been a great many alterations and deviations from the original plan, and no doubt there will be a large amount to pay for extras; and it is very likely, according to the *Norfolk Chronicle*, that the whole cost of the structure, including the large sums paid for property in the vicinity of the bridge, and other charges, will not fall very far short of 60,000*l.* More than 300 tons of iron have been used in its construction. Messrs. Grissell were the contractors. The engineers were Messrs. Walker, Burgess, and Cooper.

Portsmouth.—The new police station-house at Landport, on the site of the late Tollervy's Pond, has been commenced, and is to be completed by January next. The cost of the building will be 500*l.* and the iron railing 130*l.*: total, 630*l.*

Weston-super-Mare.—It is proposed to erect a new town-hall here, at a cost of 3,000*l.* to be raised in shares. A site has been gratuitously offered by Mr. B. G. Phillips.

Worcester.—At the late county sessions here, a report on Upton-bridge was read, which showed that the amount of contract for iron-work was 3,300*l.*; and extras, 196*l.* 13s. 2d.; for masonry, 4,650*l.*; and extras, 1,256*l.* 10s. (these extras including the cost of the roadway at the north approach, the towing-path, bridge-quay wall, &c.) Labour, stone, tradesmen's bills, &c. brought up the amount to 9,855*l.* 2s. 8d. Mr. Giles's travelling expenses were 100*l.*; but his charge for commission was not yet rendered. Although Mr. Giles had reported that the total amount due on the whole contract to Messrs. Nowell was 5,906*l.* 10s. they had claimed an additional sum of 2,330*l.* During the progress of the works much delay had taken place on the part of Messrs. Butler, who, however, had sustained a great loss by the rise in price of iron.

Exeter.—The new Diocesan Training College, erected in Old Bath-road here, was opened on Wednesday in last week, with great ceremonial. It is an Early English structure.

Lynn Berwyn.—The first stone of a bridge to be erected over the Dee, between Corwen and Llangollen, so as to unite the two counties of Denbigh and Merioneth, was laid on 7th inst. by the Hon. Mrs. Tottenham. Llyn Berwyn-bridge is the name of a deep pool over which the bridge is to be erected. Mr. Edward Lloyd acts gratuitously as inspector of the work. The workmen after the ceremony adjourned to the Sun Inn, Glyndyfrdwy, where they were supplied with *cwrw da*, &c.

Manchester.—The American Amphitheatre, in Fountain-street, which last winter was erected for equestrian performances, is being converted into a Philharmonic Hall. A Mr. Tonks, according to the local *Courier*, has become the lessee of the building, and is entirely re-modelling the interior, with the view of affording accommodation for 3,500 persons. An orchestra is being erected for a hundred performers, and arrangements made to render the acoustic qualities of the building as perfect as possible. For the comfort and convenience of the audience, the interior will be divided into dress-circle, stalls, pit, and galleries.

Edinburgh.—The building for the Scottish National Galleries, on the Mound, now in course of construction, is nearly completed, and the Royal Academy will occupy a portion of it in February.

THE BIG SHIP AND A LONDON SQUARE CONTRASTED.

A bare statement of the dimensions of the large ship which Mr. Scott Russell is just now building scarcely conveys a notion to the majority of minds of its vast size, capacity, and cost. An ingenious friend of ours, Mr. Gould, has jotted down some points of comparison between the ship and Tavistock-square, and these serve to make the idea much clearer. He points out that Tavistock-square consists of fifty-six houses, and that there are eighteen houses on one side, of 25 feet frontage, or 450 feet. It would require nine from the other side, or 225 feet, to make the length of the large ship; viz. 27 houses = 675 feet. Then the houses being 42 feet deep, it would require two houses put together to make the section of the ship, which is 83 feet; so that it would actually require all the houses in the square put together in two rows to make a block the size of the big ship, setting aside the angles cut off in coming to the keel.

Again, the inhabitants of the square may be considered eight to a house, or 448 souls; whilst the ship will some day carry four times or five times as many, say 2,240 or possibly 3,000 souls. At any time of winter the fifty-six houses in the square will probably have ten tons of coals each, or 560 tons; whilst the big ship will take nearly twenty times as much, or at least 10,000 tons for its own consumption. To carry the comparison one step farther, the cost of the fifty-six houses to build would be about 112,000*l.*—the furniture, 58,000*l.*; or 170,000*l.* ready to be inhabited. This ship, it is supposed, will cost 450,000*l.* or 500,000*l.* before it is ready for its inmates! Rather striking this.

BURLINGTON HOUSE, PICCADILLY, LONDON.

The doings of official bodies are sometimes very amusing,—very. The public have recently bought Burlington House,—that house concerning which Sir William Chambers has said, "Few in this vast city suspect, I believe, that behind an old brick wall in Piccadilly there is one of the finest pieces of architecture in Europe,"—and thinking that the aforesaid public might like to see what they had bought, we inquired for the means of getting inside the enclosure wall; and ultimately one of our assistants wrote an innocent little note to a gentleman in the Office of Works, to inquire if he might stand inside the gate to make a sketch of the building. Mind, it was simply to stand humbly in the court-yard, not to approach the sanctuary or to deduce from appearances how many years the building is likely to remain unoccupied and profitless; and he expected, as a matter of course, an immediate assent. Behold, however, after the lapse of a certain number of days arrives a mighty missive, endorsed, O. H. M. S. signed by the assistant secretary, and setting forth, in clerkly hand, as follows:—

"4721. 26. 9. 54. Office of Works, &c.
27th September, 1854.

"Sir,—I am directed by the Commissioners of her Majesty's Works, &c. to acknowledge the receipt of your letter, under date the 21st inst. requesting permission to enter the great court at Burlington House for the purpose of making a drawing of the exterior for the editor of the *Builder*; and, in reply, I am to acquaint you that the Board are not, at present, in a position to comply with your request.

"I am, Sir," &c. &c. &c.

We are not going to find fault with her Majesty's Commissioners; and if, when Parliament assembles, Mr. Bell, the architect, or Mr. Peto, or Mr. Alderman Cubitt, or any other of *our* representatives, should move for a return of the correspondence on the subject, and inquire if the Chief Commissioner,—the literary, the enlightened, the liberal Sir William Molesworth (who is opposed to secret diplomacy, likes to let the light in everywhere, and is, really, a man somewhat in advance of the age) was present when this *important* question was discussed and decided, it will be without any special request on our part. But the affair seems to us such a very good joke, that we cannot resist the desire to give our readers the enjoyment of it.

Of course, the sapient refusal did not prevent us from carrying out the intention, though it forced us to look over the wall, and has not allowed us to show fully that part of the design to which those who have praised it must have referred specially, namely, the circular colonnade behind the wall, and in front of the mansion.

Burlington House, as originally built, is ascribed to Denham, the poet architect, who was surveyor-general of the king's works, immediately before Wren. "On the 28th of September, 1668," Pepys writes, "thence to my Lord Burlington's House, the first time I ever was there, it being the house built by Sir John Denham, next to Clarendon House."

Richard Boyle, Earl of Burlington, the protector of Kent the architect, put a new south front to the house, that which we now see, and added the colonnade. The design for the former was made in 1717, and the design for the colonnade in 1718.* Colin Campbell, in the "Vitruvius Britannicus," claims the merit of the design, including the gateway; and though Walpole doubts this, and attributes it to the earl himself, he has but slight grounds for doing so. Walpole describes rapturously the effect the first view of the colonnade had upon him when he saw it after a ball at the house, looking out of the window to see the sun rise. "It seemed, he says, one of those edifices in fairy tales that are raised by genii in a night's time!"

Various alterations in the house were made at a later date, under the direction of Mr. Samuel Ware, and a slip of land on the west side of the edifice was converted into Burlington Arcade, 1819, and now produces more than 8,000*l.* per annum. The mansion is said to occupy about eight acres of ground altogether. The south front of the house, shown in our view, is 130 feet in extent, and the height of it is 48 feet.

* See Britton's "Public Buildings of London," which contains a plan and descriptive particulars of the building.

BURLINGTON HOUSE, PICCADILLY, LONDON.

CHURCH BUILDING NEWS.

Hanham Abbots.—The small church of Hanham Abbots, on the Gloucester side of the Avon, has been repaired and partly rebuilt, and was re-opened on Wednesday in week before last. The church, as restored, consists of a nave, chancel, south aisle, north porch, and western tower. Previous to the restoration, it was in a most dilapidated and insecure state; the walls out of the upright, and the roof falling in. The architects employed were Messrs. Pope, Bindon, and Clark. The nave and chancel are entirely new, and also the whole of the windows. The western tower curiously abuts on the adjoining mansion of Hanham-court, in the open park of which the church stands, and is a specimen of late Gothic, the stages having traceried windows, and terminating with embattled parapet. One ancient bell out of six remains in the tower. The church is entirely reseated with large benches having carved ends, and without doors. The chancel is fitted up with oak stalls, and the pulpit and desk are carved in the same material.

Bishopsteignton.—The parish church of St. John, Bishopsteignton, Devon, was re-opened on 12th instant, after being closed for three months, during which time alterations and improvements have been made from designs by Mr. J. W. Rowell, of Teignmouth. The cumbrous and unsightly north gallery has been removed, the whole church refitted with low seats, in stained deal; and to obtain additional accommodation a new chancel aisle has been built on the north side. The old oak pulpit has been removed to east-end of nave, and a new low screen in oak, with lectern formed in same, and a suitable prayer-desk, have been introduced. The organ, which stood in the western gallery, and obstructed the light of the window, has been removed to the east-end of north aisle, on a platform of sufficient size to accommodate the choir. Messrs. Rowell and Son, of Teignmouth, were the contractors for the works, the whole of which have been carried out at a cost of nearly 700*l.* subscribed chiefly by four or five of the resident gentry of the village, who had just recently expended a large sum in the purchase of land and erection of a new Chapel of Ease at the Hamlet of Luton, about three miles from the parish church.

Teignmouth.—The churchyards of the parishes of East and West Teignmouth have been visited by Mr. P. H. Holland, one of the inspectors appointed by the Home Secretary, and, on account of their overcrowded state, an order has been made for closing them on or before 1st June next. The parishioners, in consequence, held vestry meetings, put themselves under the "Burials (beyond the Metropolis) Act," and elected a Burial Board, who, having appointed their officers, Mr. W. R. Jordan, solicitor, as clerk, and Mr. J. W. Rowell, their architect and surveyor, will now proceed to make the necessary arrangements for forming a cemetery. The site proposed is about one mile distant from the town on the north side, about half-way up the valley towards Haldon, and contains about four acres, which is the quantity ordered by the Home Secretary to be provided.

Llanvihangel, &c.—The churches of Llanvihangel, Tor y Mynydd, and Gwernesney, Monmouthshire, in the diocese of Llandaff, have recently been reopened after complete restoration, with new seating, windows, bell-turret, &c. ——A new bell-turret has been added and other works done to the church of Llaswair Discoed, under the direction of Messrs. Prichard and Seddon, the diocesan architects.

Llanshatyd.—The consecration of the church of Llanshatyd, near Aberystwith, was to take place on Thursday in last week. The plans were furnished by Mr. Penson, architect.

Holyhead.—The new Church of St. Seiriol here was consecrated on Thursday in week before last. It is in the early English Decorated style, and contains a nave, two aisles, chancel, tower, south porch, and vestry. The nave and aisles are 77 feet 6 inches long, and 21 feet wide. The chancel is 26 feet by 19 feet. Near the tower is an octagon font, with emblematical initials carved on each side. The presbytery is ascended by two steps, the sacrarium by three. The priests' door communicates from the chancel into the exterior. The pulpit and reading-desk are of Bath stone. The roof is of open-frame timber-work, stained and varnished in imitation of oak. The floor is laid with black and red tiles; that of the chancel with encaustic tiles in pattern. The tower is surmounted by a spire, ending in a gilded cross, the total height being 132 feet. The exterior is formed of irregular courses of rubble, the stone being of a variegated colour. The window-tracings and the whole of the spire are wrought from Stoureton stone, brought from the neighbourhood of Liverpool. The east window of the chancel is a five-light Decorated window, the head being filled with tracery. The situation of the edifice is lofty. The spire serves as a sea-mark, and the orientation is due east and west. A churchyard encloses the whole. The architect was Mr. Charles Vereist, of Liverpool; the contractor, Mr. Hugh Yates, mason; and the clerk of works, Mr. Edwards, both of same place. The entire cost of the erection is about 4,000*l.* exclusive of site, of which sum there is yet 600*l.* deficient. The Hon. W. O. Stanley gave a donation of 600*l.*; the Rev. C. Williams, rector of the parish, gave 200*l.*; and the remainder consisted of smaller sums. The land was presented through a mutual arrangement between the Marquis of Anglesea and the Hon. W. O. Stanley. After the consecration of the church, the bishop consecrated the new burial-ground, which is set aside for a cemetery. It is situated at a short distance from the town, and is of a suitable elevation. It is 1 acre and 13 perches in extent, and contains a small chapel, the cost of which was defrayed by a church-rate, the Church giving the ground.

Hazlewood.—A monumental arcade of three compartments, in the Gothic style, moulded and carved in Roche Abbey stone, has just been erected in Hazlewood church, according to the *Derbyshire Advertiser*. The inscription is cut on a slab of Aubigny stone, from Normandy. The design was supplied by Mr. H. I. Stevens, architect, and the work has been carried out by Mr. J. B. Robinson, of Belper, sculptor, who has also erected a carved Gothic tomb over the grave in the churchyard.

Rochdale.—The total cost of the restoration of Rochdale Church, we understand, will be about 4,000*l.* The architect engaged in carrying out the restoration is Mr. J. Clarke.

EXAMINING BOARDS.

A TEACHER, who signs himself "A COUNTRY WORKMAN" asks if any steps are likely to be taken by the Institute of Architects or of Civil Engineers as to the Civil Service Bill; and thinks care should be taken that if examinations are provided for, the two Institutes should form the examination boards in their own departments. He complains, too, of the power given to University College. If we mistake not, the subject has been already brought before the Institute of Architects. Is it certain that the profession, as a body, would allow the Institute to exercise so vast a power as the bodies of lawyers, doctors, and apothecaries wield? As to the London University, we believe their powers have not yet been extended to conferring degrees, either in architecture or engineering.

PUBLIC BATHS AND WASHHOUSES.

WE have received from Mr. Woolcott the following account, showing the number of bathers and washers, and the receipts at eleven establishments now open in London in the quarter ended Michaelmas, 1854: —

Name of the Establishment.	Number of Bathers	Number of Washers.	Total Receipts.
			£. s. d.
The Model, Whitechapel ...	56,986	9,008	929 14 0
George-street, Euston-square ..	34,738	19,902	809 2 11
St. Martin-in-the-Fields ...	41,130	10,529	759 8 3
St. Marylebone	70,998	7,207	961 0 9
Westminster, St. Margaret and St. John	43,570	14,552	698 14 9

* Or the linen of 341,000 persons.

OUR LONDON BRIDGES AT THE PRESENT TIME.

A REPREHENSIBLE practice has gradually crept on, unchecked by the Thames Navigation Committee, of disfiguring the London bridges, spanning the river Thames by placards, ugly piers, and other like displeasing embellishments.

At London-bridge some enterprising bill-sticker has succeeded in pasting his bills under each arch. On the outside parapet a corporation painter has commenced numbering the arches with a black broad-arrow and the figure 2 with apparently a mop for his pencil and a bucket of tar for his pigment.

At Southwark the same bill-sticker has decorated the arches; and here a most unsightly and disused pier runs from the bridge up the river. The aspect this pier assumes is approaching the architecture of the south side of the Thames, and which nothing but a conflagration could improve. Huge piles on the Surrey side in the river prevent navigation under two or three of the arches of this bridge.

Blackfriars has a monstrous obstruction in the shape of a City pier, obstructing navigation and causing a heavy swell in the centre arches of the bridge, dangerous for small boats to row into its vortex. Three arches are stopped up as dangerous, and numerous piles obstruct navigation.

Waterloo has also become a hoarding for the indefatigable bill-sticker.

Hungerford, with its unsightly pier, is in keeping with its neighbour Westminster-bridge for obstructions. The latter bridge being under the engineers' and architects' dismemberment operations, changes its features almost every day. From the wisps of straw dangling over some of its arches, the engineers indicate the danger of navigation under its arches. Steamboats are cautioned to shut off their steam whilst going under this bridge, lest vibration or swell should bring an arch on deck.

Vauxhall, some months since, had a run-out pier from its centre arch, the toll of which realized 400*l.* per year to the shareholders of this bridge, one of whom having an eye to the architecture of the bridge, discovered a clause in the bridge Act, which enabled him to take legal steps to remove the pier at the expense of his dividend. The man who stuck the bills on the gates of Apsley-house has succeeded here likewise in his vocation.

Chelsea suspension-bridge, which was designed at the outset to be a free bridge, and which would, indeed, have been a boon to the public, particularly at this point of the river, is now, it appears, to levy toll upon equestrians and pedestrians like its right and left hand sisters Vauxhall and Battersea. This bridge will become the approach from the north bank of the Thames to the south, and to the new Battersea-park, and being a tolled bridge, the park will be worse than useless to the inhabitants on its opposite banks. The works of this bridge are going on as rapidly as two boys and a man, who have been at work at it for some months past, can make it. It appears the contractor for the works is at issue with the contractees.

Battersea and Putney bridges would be a disgrace to a Hottentot river; and if "it's talked of" could remove these villanous piles of old wood, we should years ago have ceased to mourn over them.

L.

THE ARCHITECTURAL EXHIBITION.

A GOOD EXAMPLE.

MR. WILLIAM HERBERT, of Clapham Common, writes us,—"As you have stated in the *Builder*, that some aid is necessary for the duly carrying out of the architectural exhibition, about to be held in Suffolk-street Gallery, I enclose a cheque for five guineas." We have forwarded it with great pleasure to the honorary secretary, and we hope this liberal and prompt response on the part of Mr. Herbert, will be largely adopted as an example.

THE BUILDERS' BENEVOLENT INSTITUTION.—The annual dinner of this institution was held at the London Tavern, Bishopsgate-street, on Thursday evening last, too late for us to give any particulars in our present number.

SIGHTS AND THE STAGE.

Interested as we are in the progress of scene-painting and stage decoration, and seeking always to make known the names of the more worthy professors of the art, and to point out their best efforts for commendation, we must not omit to record the effect which has been produced, in this and other respects, at *Sadler's Wells*, in the revival of "Pericles, Prince of Tyre;" although, through the crowd which filled the theatre in every part, we were not placed so as to see it to advantage.

We are not of those who believe that Shakspeare wrote this play, but he doubtless doctored it, and added some scenes. In the original, it is not fit for the table of the family circle, but by judicious omissions, Mr. Phelps has freed it from all objection; and when it is remembered that the action passes through Antioch, the metropolis of Syria; Tyre; Tarsus, of Asia Minor; Mitylene, the capital of an island in the Ægean Sea; and Ephesus, the capital of Ionia, the scope it affords to the scene-painter will be seen at once. Most ably has Mr. F. Fenton availed himself of the opportunity; and he has produced a series of illustrations of Greek and Assyrian-ized architecture, which, though exhibiting here and there a Renaissance tinge, are both instructive and beautiful. The arrangement of the Hall of State, at Pentapolis, where the apartment is formed on the top of the thick wall, and you see over it into the open court below, which the walls enclose, shows a full knowledge of Mr. Fergusson's theory as to the construction of the Assyrian temples. This revival must be considered altogether as a very remarkable production.

The Adelphi.—The first scene for the new drama called "The Summer Storm," which represents meadow land, with a distant view of Hallerton-place, is a very complete one: the stage is covered with grass, and Mr. Keeley, as a bird-catcher, with his nets spread, completes the illusion. There is also a very good scene in the third act, the chalk-pits, with their thin layer of mould on the upper surface, very creditably painted by Messrs. Pitt and Turner. The piece itself is weak in construction; but it is very well acted, and by dint of strong "Adelphi effects," will doubtless draw for some time to come. Of the latter, the climax is that wherein the floor of one of the apartments recedes bodily from beneath the feet of its occupant, and precipitates him into the yawning chasm. All hold their breath.

St. James's Theatre.—At this theatre, recently opened under new management, considerable pains appear to be taken to give completeness to the pieces produced. "The King's Rival," although not quite so successful, in the first instance, as some previous plays by the same authors, Messrs. Tom Taylor and Charles Reade, has been made, by a few omissions, and by wedging up, a very effective piece. It purports to be a picture of the times, those of King Charles II. such as they were, and we have a scene of Spring-garden. The old Spring-garden, between Charing-cross and St. James's-park, which had its name from a jet of water that was made to wet those who were near it, by the pressure of the foot, was a place of great resort in the reign of Charles I. After the Restoration, the ground was built on (the spot still retains the name), and a new Spring-garden was formed, which we now know as Vauxhall. Nell Gwynne, who figures prominently in the piece, is charmingly played by the manageress, Mrs. Seymour, and the whole is very satisfactory.

The Royal Panopticon. — The Illuminated Fountain now being exhibited here is one of the most beautiful sights in London. It appears to be an adaptation of Duboscq's apparatus to the great fountain of the Institution, colours being imparted from the top of the dome, as well as at the spring of the water. Mr. Malcolm's lecture on Natural Magic is very amusing, though it appears a pity to destroy some of the clever tricks which used to puzzle all beholders. Some very good dissolving views of Verona and its buildings have taken the place of the sad daubs which *illustrated* "Acis and Galatea," and in other respects a considerable change for the better is apparent. A very pleasant evening may be spent here.

A new Theatre at Boston, United States, has been built. The stage is 67 feet deep from the curtain, and, calculated from the extreme front or foot-lights, measures 85 feet. The curtain opening is about 48 feet in width by 41 feet in height. There is a depth of some 30 feet below the stage, and the height from the stage to the fly-floor is 66 feet. These distances allow the raising and lowering of scenes without hinges or joints, the use of which soon injures their appearance. There are seven rows of side scenes or wings, with considerable space beyond the most remote, for perspective. The stage is provided with traps, bridges, and all contrivances for effect. The green-room is 34 feet by 18 feet. The walls separating the stage from the auditorium are of brick, and considered fire-proof, while the curtain opening is provided with a safety-screen of iron net-work, balanced by weights, and managed with machinery so arranged as to be operated from either side of the curtain wall. The auditorium is about 90 feet in diameter, and circular in form, except that it slightly flattens in the direction of the stage; the depth from the curtain to the back of the parquette being 84 feet. The front of the stage projects into the auditorium 18 feet, and the height of the auditorium is about 54 feet. There are proscenium boxes on either side of the stage, handsomely draped. A space of 10 or 12 feet from the parquette wall, and nearly parallel with the front of the first tier, is separated and somewhat raised from the middle portion of the house, the whole parquette floor, however, being constructed in a dishing form, and varying several feet. The grand staircase is built of solid oak, with a heavy rail on either side resting on open panel work: it commences between scagliola columns some 16 feet apart, and rising a few steps separates on a board landing into two branches 9 feet in width, which, flanked with arcades, wind gently upward and terminate in the dress circle lobby above. The auditorium is lighted from wall brackets, and by a circular *sun-burner* located in the dome of the ceiling.

"THE DICTIONARY OF ARCHITECTURE."

At a meeting of the committee of the Architectural Publication Society, held on the evening of Wednesday, the 25th of October, Mr. Tite in the chair, it was resolved to submit the whole question of the future plan and scope of the Dictionary to a general meeting of the subscribers, which will be summoned for Tuesday, the 14th of November, at the rooms of the Institute of British Architects. The object of all, of course, must be, not to throw any obstacles in the way of its completion, but to carry it out in the best possible manner.

DOINGS ABROAD.

A correspondent, writing to us from Baden, says,—There is very little new between Paris and this place.

In the principal street at *Amiens* several new houses are being built, of a most substantial character (stone). They are intended for shops.

At *Rheims*, the restoration of the north-west tower of the cathedral is progressing, that of the south-west being completed so far as the spire, a few feet only (five or six) of which are executed. The scaffolding, however, is removed. The railway station is very inconvenient at this place: all take their tickets at the same office.

At *Nancy*, a new railway station is in course of erection, now up to the first floor: it extends on each side of the line *about* 150 feet; material, stone; floors, fire-proof (of course): the ground floor is a plain arcade.

At *Strasbourg*, the new railway station is nearly completed, little more than fittings being required. It has a façade of 150 to 200 feet on the river-side; an arcade, with moulding on angles of piers, continued round the arch; nothing above the arcade in centre of river front; but an upper floor is carried up at the angles, and continued along the two lateral elevations: the upper floor has windows, with an ordinary architrave, not of very good proportion: the ground floor as in front; material, stone; the design rather indifferent. In the cathedral, workmen are still employed on the screen (?) enclosing the area on the south side of the building: eleven traceried heads are supplied to the doors and windows in the screen: there are nine to be done to complete the work, as on the north side, which has been some time finished.

THE OXFORD MUSEUM COMPETITION.

We understand that thirty-three architects have submitted designs for the proposed museums in reply to the advertisement. We also learn that in order to give all members of convocation an opportunity of forming a judgment upon their merits, it is proposed to arrange them alphabetically, according to the mottoes sent with them, in the Radcliffe Library, and open them to public inspection.

PRESERVATION OF OAK DOORS.

I put up, about the date 1845, in three or four different places and situations, oak doors and churchyard gates exposed to west and southern aspects, and found after using either boiled oil or varnish the same rusty or dirty mouse-like colour as named by "O. W. W. F." It is the varnishes that cause the bad colour. If either have been used, let it be thoroughly cleaned off and a plentiful supply of raw linseed oil be used at once, and a soaking occasionally and rubbing it in with a cloth will remove the dirt and dust that may collect, and the wood will soon get a fine dark colour, showing all the grain of the wood throughout. The raw oil will not form a body for the air to act on as on the varnish, but will only darken the oak. W. H. F.

I use the oil hot—warm at least,—but copal varnish is objectionable: when exposed to the elements it cracks, chips, and turns to a lightness. What I suggest for an external varnish is far superior, namely, dissolved or liquified caoutchouc,—the common India-rubber, dissolved in a menstruum of alcohol or rectified spirits of wine: *probatum est.*

Thomas Goodliffe.

And "A Lady" writes,—

"I have a great fancy that oil plentifully used after the scraping process would restore and preserve the oak door. Dining-tables polished with oil, only well rubbed in and off, have a much brighter face than French polish gives, and do not mark with the hot dishes. Of course it darkens the wood, but that in this case could be no detriment."

AMERICAN BUILDING PATENTS.

We condense the following from the more recent lists of patents published in the *Journal of the Franklin Institute of Pennsylvania*:—

"For an Improvement in Travelling Bridges; Frederick Field, Adrian, Michigan. Claim: 'My bridge acts as a carriage as well as a bridge, receiving its load upon it while resting on the abutments, or one side of the span or spans to be crossed, carries the load over, and rests upon the other side to receive its return load, and so back and forth, leaving the spaces between the piers open for vessels, &c.'——For an Improvement in Iron Buildings; Stephen Colwell, Philadelphia, Penna. Claim: 'The mode of constructing the skeleton walls of buildings of any desired thickness, by placing vertically upon each other, rectangular frames, or hollow squares of cast-iron, and sections of same, like bricks or blocks of stone, but not breaking joints, as in laying brick or stone, the said frames being connected together and levelled, substantially as described, the skeleton wall being separate from the covering of the building, but adapted for receiving on its exterior or interior surface a covering of plates of iron, or other suitable material, removable at will.'——For an Improved Mode of Securing Stones in Foundations; J. P. Avery, Stonington, Connecticut. Claim: 'The combination and arrangement specified, of the dovetails and tightening key, or its equivalent, when the said dovetails are constructed of taper flanch form, fitting within or under projecting lips to the dovetail recesses in the stones, to draw and clamp the two courses together, the said dovetails fitting within the one stone of the one course, and the two stones of another course, and being driven home by the intervening key, to make tight the vertical and horizontal joints in the two courses, and to clamp the two courses together firmly and permanently.'——For an Improvement in Brick Pottery Kilns; Joseph Baron de Palm, now residing in the City of New York; patented in England, July 13, 1852; in

France, August 13, 1852; and in Holland and Belgium, September 15, 1852. Claim: 'A series of upper and lower chambers in kilns for baking or burning bricks and pottery, communicating with each other by apertures in the partition walls and floors, in combination with adjustable dampers or registers in the apertures in the floors between the upper and lower chambers, as described, for the purpose of regulating and controlling the heat in its ascent, and directing it to those parts of the upper chambers where it may be most required.'——For an Improvement in Brick Machines; Stephen Ustick, Philadelphia, Pennsylvania; ante-dated November 15, 1853. Claim: '1st. The arrangement, substantially as described, of the mould box, with the fixed and movable pistons, whereby, by its motion in the line of motion of the piston, it is made to perform the function of feeding the clay between the pistons, shutting it off from communication with the hopper, and discharging the brick. 2nd. The apparatus for receiving and delivering the brick, consisting of the hand, table, and finger, arranged and operating substantially as described. 3rd. The arranging on the cam wheel the oil boxes for lubricating and cleaning the faces of the pistons. 4th. The withdrawing the condensed air from the mould while the pressure is produced by the groove and scraper, or other equivalent devices, substantially as set forth.'——For an Improvement in Brick Machines; Thomas E. Seay, Columbia, Virginia. Claim: 'The vertically-moving knives, arranged as described, in combination with the levers and slides, whereby the moulded bricks are separated from the mass of clay at the same time that the moulds are raised from their recess, for carrying away and discharging the bricks. Also, the employment of the gratings, as described, between the mill and moulds, for screening the clay from stones and other hard substances, when this is combined with the exterior chamber, into which the stones and other substances are forced by the action of the clay.'

SEWAGE AND WATER.

YOU express an opinion that the Commissioners of Sewers should also be Commissioners of Drainage,—ought they not to be Commissioners of Water Supply also? I think they ought to be: then if every street and lane has a sewer, and every house therein has a drain well constructed, and if every drain has a water supply at its farthest extremity, which water supply should be *constant*,—say from a half-inch pipe,—then I think we should be in a fair way of having a wholesome sewerage; for until the artery (or clean water pipe) supplies the pure fluid the circulation through the vein (or soil-drain) must be defective. I think if we take the system of the circulation of the blood in the human body as the basis of operations in our sewage works we shall not be far from attaining perfect results. The matter appears to be of so much importance that it should be undertaken by somebody who would adopt it in all places where drainage is used, but more especially in the metropolis, where such vast sums are paid for water, without having what is actually required. I know of one district, supplied by the Lambeth Company, where they have charged 50*s.* per annum upon houses rated to the poor at 20*l.* per annum, which houses contain but seven rooms, including scullery and attic. G. P.

THE DRAINAGE OF BANGOR.

IN the various attempts, successful and unsuccessful, to improve the drainage and promote the healthfulness of towns, the local boards of health and other authorities on whom rest the responsibility and weight of such attempts have met with much obloquy and stubborn resistance from the ignorant and the greedy portion of various communities, and even sometimes from those who ought to have known better. One class of professional men, however, whose interests are materially at stake in every attempt to promote the healthfulness of towns, has everywhere formed a noble exception to this obstructive policy: we allude to the medical faculty, of whose disinterested and strenuous endeavours to aid local boards of health in their onerous, and, in many cases, by no means popular exertions, we have noted many instances. A medical man, therefore, who has obstinately and systematically acted on the contrary line of tactics, even under the false pretence of disinterested concern for the public health and welfare, stands out in glaring contrast to the general body of his professional brethren. Almost the only one of the kind we recollect of, has, it appears, been perseveringly at work of late in Bangor, instigating the poorer and more ignorant classes against the new system of drainage which is being carried out there, and that with so much temporary success, that the Central Board had lately to put the inhabitants to the additional expense of sending their inspecting engineer, Mr. H. Austin, down to make a thorough investigation into the alleged causes of complaint, and of the report of that gentleman, after inspecting the district, and conferring with the local surveyor (Mr. E. Johnson), we have just had a copy forwarded to us by a Bangor correspondent. From this report it appears that there is not the slightest foundation in fact for the complaints urged, and which, in all probability, would have been urged, under other forms and pretences, whatever system of drainage had been adopted, or whoever had attempted to carry it out and so to deprive this worthy of a portion of his professional fees. We cannot (and indeed need not) enter into any detail of so baseless a system of obstruction to useful measures, and will only add that it is gratifying to know that the inhabitants (in the words of Mr. Austin's report to Sir Benjamin Hall) may now "congratulate themselves that the local board, in the midst of great and undeserved obloquy, have proceeded steadily in discharge of the duties thrown upon them by the Act, and have carried out a system of works which is a credit to the town." The result, therefore, is, that instead of a stop being put to further progress of the works, as was prayed at the instigation of the person alluded to, and doubtless sincerely and anxiously desired by him at least, the Local Board have received the sanction of the General Board to borrow more money, in order to enable them to carry out these works. The new water-works, we are also glad to hear, are making a satisfactory progress, and in a few weeks the new supply will be available, and the house drainage may then be fully carried out, the surface drainage completed, and all nuisances removed.

Notices of Books.

Proceedings of the Architectural Institute of Scotland. Session 1853-54. Edinburgh.

THE last part of the third volume of "Proceedings of the Architectural Institute of Scotland," recently published, contains four meritorious papers, viz.: "On the Adaptation of previous Styles of Architecture," by Mr. Alexander Christie; "On the Hills and Valleys, and the Walls and Gates of Rome," by Mr. Alexander Thomson; "On the Tombs of Rome," by the same author; and "Remarks on Colour, as applied to Architecture," by Mr. C. H. Wilson, of the Government School of Art. While advocating the use of brighter colours inside than have been used, Mr. Wilson deprecates an imitation of the Greeks in the practice of painting the *exterior* of our public edifices, and in colouring statuary.

How long is London to be Victimized by its Sewage? London: Effingham Wilson. 1854.

THE real motive of this pamphlet appears to be to set forth the merits of Mr. Morewood's scheme of tunnel-sewers, and to denounce the intention of the Commissioners of Sewers to "suffer the metropolis, under the 60 feet level, where the malaria is registered by 7,000 deaths [during recent outbreak of cholera], to remain without any outfall drain on the north side of the river, until they shall have furnished two outfalls to the higher districts, where the same barometer gives us only 575 deaths." The necessity for a low-lying outfall drain is certainly most imminent. We agree with the writer, that it is no slight reflection on this country, whilst possessing the most abundant capital and the greatest engineering skill of the age, that her legislators should breathe the exhalations of the sewers, her noble metropolitan river be converted into a cesspool, and 600,000 of her inhabitants, close upon the seat of Government, be living with sewage water in their cellars.

Mathematical Tables. By J. L. ALEXANDER, Engineering Surveyor. Penny, Lincoln's-Inn Fields. 1854.

THESE tables are intended to facilitate the setting out of curves of railways, roads, canals, centres for arching, &c. They appear to have been prepared with great care, and are well printed on good stout paper, forming a handsome little volume.

The Statist. No. I. Vol. I. Edited by R. T. JOPLING, F.S.S. Mitchell, Red Lion-court, Fleet-street.

THIS new candidate for public patronage begins with several well-timed articles on life and health, such as statistics of Accidents in London, Cholera and Hospital Statistics, Health and Longevity, &c. besides others on Games of Chance, Reviews, &c. There is a decided want of such publications among the more limited scientific classes; but important as the general subject of statistics is, we fear there may be scarcely buyers enough to enable the publisher to continue such a work. In the present instance, however, a bi-monthly issue only, and a very moderate price (1*s.* 6*d.*) may, with able editing, overcome the difficulty, and we hope it will.

A Manual for Practical Surveyors. By E. W. BEANS. Trubner and Co. Paternoster-row. 1854.

The Practical Surveyor's Guide. By A. DUNCAN. Sampson Low, Son, and Co. Ludgate-hill.

THESE are both American publications, and are very fair compilations; but they are scarcely so much needed in this country as in America.

Miscellanea.

SEPULCHRAL MEMORIALS.—Your correspondent's idea is carried out, and has been in use in the London cemeteries at Highgate, and Nunhead, near Peckham, in Camberwell parish, for several years. The names, &c. of those buried as common interments for 30*s.* including chapel service, may be placed on pillars for a trifling fee. I have frequently heard very gratifying remarks from humble persons on reading the inscription to their friends. I think the pillars cost erecting about 100*l.* and are now more than paid for. This fact is an encouragement to the excellent suggestion of your correspondent in last week's *Builder*.—H.

MANCHESTER AND SALFORD SANITARY ASSOCIATION.—The annual meeting of this association was held on Thursday before last, in the Town-hall, Manchester. The meeting was numerously attended; the Bishop of Manchester presiding. On the platform were the mayor, and Sir James Bardsley, M.D., Mr. James Kershaw, M.P. and many other gentlemen. The Right Rev. Chairman, in opening the proceedings, said he believed that the greatest possible good had both morally and physically resulted from the working of this association,—that its enlightened and benevolent objects had been attended with the happiest results—results almost exceeding those contemplated by the proposers themselves. There were various speakers, and several resolutions were passed, one of which was to the effect, that inasmuch as preventible diseases are now known to constitute a very extensive class, and the loss of human life and increase of suffering caused by such diseases are every year exceedingly great, the meeting was of opinion that the efforts of the medical profession of the district to explain the causes of such diseases, and the valuable assistance they had rendered to the association, deserved the most public acknowledgment. In the evening a public meeting of the friends and supporters of the association was held in the Town-hall, Salford. The mayor of Salford presided. A resolution was here passed, to the effect that the efforts made by this association to improve the personal and home habits of the people, by means of lectures and tracts, deserved the special encouragement and co-operation of the friends of sanitary improvement; particularly as such efforts, in whatever degree successful, tended to remove very serious impediments to the influence of religion and education.

IMPROVEMENTS IN BORING ROCK.—Mr. Nasmyth proposes to overcome the *vis inertiæ*, by converting the iron bar, or jumper, into a piston-rod, working in an air-tight cylinder, through a stuffing-box. By this plan, it is conceived that increased force will be acquired; for when the piston is drawn out to the end of the cylinder, the pressure of the atmosphere will force it back again with increased effect. It was suggested at the meeting of the British Association, where Mr. Nasmyth read a paper on the subject, that a similar result might be produced, even more readily, by the employment of vulcanised india-rubber springs. Mr. Nasmyth observed, that any very elastic medium might be made to answer the purpose, but air suggested itself, as affording greater extent of spring.

ST. PAUL'S, DEPTFORD.—The death of Mr. R. I. Martyr, alluded to in the *Builder* of last week as rendering the district surveyorship of Deptford vacant, also makes a vacancy in the office of surveyor to the same parish. Already there are two candidates in the field, first, Mr. Maltby, who contested for this appointment at the time of Mr. Martyr's election, and has ever since been a resident at Deptford: his opponent is Mr. Lidcart, late clerk to Mr. Martyr. Mr. Maltby had served the parish for six years previous to the appointment of a permanent surveyor with a salary, which gives him a claim.

The French Crystal Palace.—The glaziers employed at the Exhibition Palace on Saturday morning before last, displayed a flag from the top of the grand aisle of the building, to indicate the complete termination of the operation of covering in with glass the gigantic edifice.

Curiosities of London. — Mr. John Timbs's long-announced volume of "Curiosities of London," is just ready for publication by subscription. The work will exceed 750 closely-printed pages: the author's materials have been five-and-twenty years in collection. The "Curiosities" will include the topography of the town in its more celebrated localities and associations, manners and characteristics; its existing antiquities, and collections of rare art and *virtu*, libraries and museums, public buildings, and royal and noble residences; its great institutions, its public amusements and exhibitions, manufacturing and commercial establishments; so as to chronicle the renown of modern as well as ancient London. Mr Timbs has been long a worker in the field of London antiquities, and will doubtless produce an interesting and valuable volume.

American Monuments. — The monument to Henry Clay, in the Lexington Cemetery, Kentucky, is to cost from 50,000 to 100,000 dollars. The committee offer a premium of 500 dollars for the best plan and specification. —— A great monument is about to be erected in honour of the landing of the Pilgrim Fathers. Land has been obtained for a site, and 20,000 dollars have been subscribed.

Austin's Hexagonal Separating Drain-pipes. —The object of this invention is to afford ready access for clearance from any obstructions, and to prevent the present waste by breakage consequent upon the clearing of socketed pipes. They are also available for casing over telegraphic wires, for service-pipes for gas, water, &c. The tubes are circular inside, hexagonal outside, and the upper part lifts off. On this form of construction (honeycomb) Mr. Austin has also patented casks or barrels for dry and wet goods, for compact stowing.

Appointment of County Surveyor at Worcester. — The votes taken at the late quarterly sessions on the list of three names already referred to, were as follows:—Mr. Rowe, twenty-five votes; Mr. Day, twenty-two; and Mr. Milne, eight. The chairman adverted to the fact that the candidate highest on the list had not a majority of votes, if the whole bench were included; and the question was, whether there ought to be a second taking of votes between Mr. Rowe and Mr. Day alone. Was it a valid election as it stood? They had the precedent of Parliamentary elections in its favour. It was finally agreed not to disturb the voting, and Mr. Rowe was therefore elected.

Bell-ringing a nice Recreation for stout Gentlemen.—A correspondent, Mr. Haydon Wilson, who speaks of bell-ringing as an amusement requiring as much attention as cards, draughts, or billiards, suggests the formation of ringing-clubs of gentlemen, who might develop the science, and bring it to high perfection, not only to their own amusement and recreation, but also for the public enjoyment.

City of London Cemetery.—A committee have reported to the Commissioners of Sewers "that the land for the City of London Cemetery having been enclosed under the contract already entered into with Messrs. Crook, and the time having arrived for the execution of the necessary buildings thereupon, we have had laid before us, agreeably to our directions, by the surveyor, the plans for the erection of such buildings, consisting of an Episcopal chapel, a Dissenters' chapel, a superintendent's house, a porter's lodge, and the gateway forming the principal entrance. That, having examined the same, we have approved of them, subject to certain alterations which we have suggested, and recommended them to your hon. Court for adoption. We also recommend that you receive tenders for the execution of these works in one contract, together with certain works of extra drainage which are found necessary, immediately. These several works are estimated by the surveyor to cost about 16,000*l*. We have also approved of a plan for the construction of catacombs, to receive about 800 bodies, but at the present time to be completed for the reception of only 200." About 70,000*l*. is spoken of as the probable total cost.

Model Cottages.—Some model cottages are to be erected at Sutton, Surrey, for the City of London and Counties Land Society; Mr. Knightley, architect. The following tenders have been received. The first is probably the result of some misunderstanding or accidental error:—

Hyatt	£940	0	0
Stevens	584	0	0
Freeman	564	0	0
Clowser and Potter	490	0	0
Stone and Bushby	490	0	0
Pready	486	0	0
Page	471	0	0

London City Sewers.—The Commissioners have referred the question of properly ventilating the sewers to their surveyor and medical officer. In the course of the discussion Mr. Hopgood said that four or five years ago, when this subject was discussed in that Court, a gentleman in the City very kindly consented to allow a ventilating shaft to be placed near his house. On his return to town, after a short absence, his wife and four or five children, as well as himself, were taken ill in the middle of the night, the gas thrown off having entered the apartments of the house and caused sickness of a very alarming nature. In that instance, therefore, the experiment was tried and did not succeed.
